```
Pin    1    Program Inputs   P0
       2                     P1
       3                     P2
       4                     P3
       5                     P4
       6                     P5
       7                     P6
       8                     P7
       9    5.12MHz
      10    Ref. Osc (10.240) input
      11    Ref. Osc. output
      12    Supply Voltage
      13    Input to programmable divider, greater than 3MHz
      14    Program input mode switch
      15    Output of prog. divider
      16    Phase detector input
      17    Output Ref divider-10Kc
      18    Phase det. input
      19    Output of active filter amp.
      20    Input of active filter amp.
      21    Error signal output of phase det.
      22    Loop locked - High level
      23    Ground
      24    Inhibit output normal - Low level
```
