INTRODUCTION

Thank you for choosing this new Icom product.

The IC-R9000 is an advanced communications receiver designed for professional, worldwide communications. Equipped with Icom's state-of-the-art CRT display, the IC-R9000 includes an advanced multi-functional scanning system, a spectrum scope and an excellent stability oscillator that give you sophisticated measuring capability.

IMPORTANT

(1) READ THIS INSTRUCTION MANUAL CAREFULLY before attempting operation. If you have any questions regarding the operation of the IC-R9000, feel free to contact your nearest authorized Icom Dealer or Service Center.

(2) SAVE THIS INSTRUCTION MANUAL — This instruction manual contains important safety and operating instructions for the IC-R9000.

PRECAUTIONS

(1) NEVER let metal, wire or other objects touch any internal part of the receiver. Risk of electrical shock could occur.

(2) NEVER place the receiver within the reach of children or babies at any time.

(3) NEVER expose the receiver to rain, snow or any liquid.

(4) DO NOT operate the receiver when it is covered by objects which impede heat dispersal.

(5) AVOID using the receiver in temperatures below -10°C (+14°F) or over +50°C (+122°F). The receiver may not function properly in extreme temperatures.

(6) AVOID placing the receiver in excessively dusty environments and in direct sunlight.

(7) BE CAREFUL! The heatsink may become hot when operating the receiver continuously for long periods.

(8) Unplug the AC power cable from the AC outlet and wait a few minutes when opening the receiver cover.

EXPLICIT DEFINITIONS

The following explicit definitions apply to this instruction manual.

<table>
<thead>
<tr>
<th>WORD</th>
<th>DEFINITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>WARNING</td>
<td>Personal injury, fire hazard or electric shock may occur.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Equipment damage may occur.</td>
</tr>
<tr>
<td>NOTE</td>
<td>If disregarded, inconvenience only. No personal injury, risk of fire or electric shock.</td>
</tr>
</tbody>
</table>

UNPACKING

Accessories included with the IC-R9000:

<table>
<thead>

14 SPECIFICATIONS ......................... 67

15 OPTIONS .................................. 68
2-1 FRONT PANEL

1. **POWER SWITCH [POWER]**
   - Turns ON and OFF main power.

2. **TIMER SWITCH [TIMER]** (p. 56)
   - Activates a timer function.
     - \[ \text{Alarm timer or OFF} \]
     - \[ \text{Sleep timer or daily timer} \]

3. **METER SWITCH** (p. 36)
   - Selects a meter function.
     - \[ \text{Signal strength meter} \]
     - \[ \text{Center meter (activates in FM or WFM)} \]

4. **MULTI-FUNCTION METER** (p. 36)
   - Shows the relative signal strength or signal deviation.
   - See 3 METER SWITCHES for selection.

5. **AGC SWITCHES** (p. 38)
   - Select the AGC time constant, slow, fast and OFF.

6. **AF GAIN CONTROL [AF GAIN]**
   - Adjusts audio output level.

7. **SQUELCH CONTROL [SQUELCH]** (p. 35)
   - Adjusts squelch threshold level.
   - When [RF GAIN] is rotated counterclockwise the squelch may open except in FM or WFM mode.

8. **BASS RESPONSE CONTROL [BASS]**
   - Adjusts the bass response of the audio output.

9. **TREBLE RESPONSE CONTROL [TREBLE]**
   - Adjusts the treble response of the audio output.

10. **NOISE BLANKER SWITCH [NB]** (p. 38)
    - Activates the noise blanker circuit. Use together with [NB LEVEL].
    - Noise blanker deactivates in FM and WFM modes.

11. **NOISE BLANKER WIDTH SWITCH [NAR/WIDE]** (p. 38)
    - Removes wide-type pulse noise known as “woodpecker.”
    - Turn ON [NB] to use this switch.
    - LED goes out : Narrow selected
    - LED lights up : Wide selected

12. **NOISE BLANKER LEVEL CONTROL [NB LEVEL]** (p. 38)
    - Adjusts the noise blanker threshold level. Suppresses noise without signal distortion.
    - Turn ON [NB] to use this control.

13. **RF GAIN CONTROL [RF GAIN]** (p. 35)
    - Adjusts gain at the RF stage.
    - The S-meter needle rises when the control is rotated counterclockwise.
    - Only those signals stronger than the level indicated by the needle will be heard.

14. **SCAN SPEED CONTROL [SPEED]** (pgs. 48 ~ 54)
    - Adjusts the scanning speed.

15. **SCAN DELAY TIME CONTROL [DELAY TIME]** (p. 46)
    - Adjusts the time delay between “scan stop” and “scan resume.”
    - Select scan resume switches [A] or [B] to use this control.
16. **VOICE SCAN CONTROL SWITCH [VSC]** (p. 46)
   Restarts a scan after a few seconds when it stops on a signal without voice or audio signals.

17. **SCAN RESUME SWITCHES** (p. 46)
   Select the scan resume condition.
   - **[OFF]**: Scanning does not resume while a signal is being received. Scanning resumes approx. 3 sec. after a signal disappears.
   - **[A]**: Resumes scanning several seconds* after scanning stops. Scanning stops for several seconds* even if the signal disappears.
   - **[B]**: Resumes scanning several seconds* after scanning stops. Scanning resumes approx. 3 sec.* after the signal disappears.
   - **[∞]**: Cancels a scan when a signal is received.
   *Time can be adjusted with the [DELAY TIME] control.

18. **HEADPHONES JACK [PHONES]**
   Accepts 4 ~ 16 Ω mono or stereo headphones with a standard 1/4 inch plug.

19. **RECORDING JACK [REC]** (p. 27)
   Audio output jack for a tape recorder. The fixed audio output level is set for a tape recorder AUX jack.
   - Refer to p. 65 Section 12.3 for voice synthesizer information.

20. **CALIBRATOR POT AND SWITCH [CALIBRATOR]** (p. 64)
    The calibrator pot adjusts the reference oscillator frequency. Use a screw driver to adjust.
    The calibrator switch generates calibration markers every 500 kHz up to 29.500 MHz.

21. **RECORDER SPEECH SWITCH [REC SPEECH]** (p. 65)
    Announces the frequency through the [REC], [LINE OUT], and [SPEECH OUT] jacks when scan stops.
    - An optional UT-36 VOICE SYNTHESIZER UNIT is needed for this function.
    - Refer to p. 65 Section 12.3 for [REC SPEECH] and [LINE MIX] combination.

22. **DIMMER SWITCH [DIMMER]**
    Dims the intensity of the CRT display, function meter, and all indicators on the front panel.

23. **BRIGHT CONTROLS [METER], [CRT]**
    Adjust the following intensities.
    - **[METER]**: Meter and indicators
    - **[CRT]**: CRT display (Set to the 2 o'clock position)

**NOTE:** Great intensity will shorten the life of the CRT display.

24. **TIMER INDICATOR [TIMER]** (p. 56)
    Indicates the [TIMER] switch is ON.

25. **RECEIVE INDICATOR [RECEIVE]**
    Indicates the squelch is open.

26. **CALIBRATOR INDICATOR [CALIBRATOR]** (p. 64)
    Indicates the [CALIBRATOR] switch is ON.

27. **RECORDER SPEECH INDICATOR [REC SPH]** (p. 65)
    Indicates the [REC SPEECH] switch is ON.
2 LOCK INDICATOR [LOCK] (p. 10)
Indicates the [LOCK] switch is ON.

2 CRT MULTI-FUNCTION SWITCHES [F-1] ~ [F-6] (pgs. 11 ~ 23)
Select CRT display menu functions.

3 SCAN SWITCHES

| [PRIO] | Starts and stops priority scan. (p. 49) |
| [PROG] | Starts and stops programmed scan. (p. 47) |
| [f] | Starts and stops ΔF scan. (p. 50) |
| [MODE] | Starts and stops selected mode memory scan. (p. 52) |
| [MEMO] | Starts and stops memory scan. (p. 51) |
| [SEL] | Starts and stops selected number memory scan. (p. 53) |
| [AUTO] | Starts and stops auto memory write scan. (p. 54) |

4 CI-V REMOTE RESET SWITCH [REMOTE] (p. 31)
The indicator above the switch lights up when one of the following CI-V remote commands is received through the [REMOTE] jack on the rear panel:
- AF gain controlling data
- RF gain controlling data
- Squelch level controlling data

The switch resets the above commands and respects the individual controls.

5 ATTENUATOR SWITCHES (p. 35)
Select 10 dB, 20 dB or 30 dB RF attenuation to prevent front end overload.
- To select 30 dB attenuation, push both [ATT 10dB] and [ATT 20dB].

6 DISPLAY SWITCH [DISPLAY]
Sets the CRT display to an external video input.

7 ANTENNA SELECTOR SWITCH [ANTENNA] (p. 26)
Allows output of 13.8 V DC (max. 100 mA) from the rear panel [ANT SEL] jack. Use an external antenna selector, preamplifier, etc., with this voltage.

This switch can be used with the rear panel [HF ANT SW] when operating below 30 MHz. See p. 7 [HF ANT SW] for more details.

8 AUTO FREQUENCY CONTROL SWITCH [AFC] (p. 35)
Turns ON and OFF the AFC function.
- Activates in FM or WFM mode.

9 MODE SWITCHES (p. 36)
Select the operating mode.
- WFM mode cannot be selected below 30 MHz.

10 KEYBOARD (p. 33)
Sets the operating frequency or memory channel.
Selects a scan group during programmed scan, auto memory write scan or selected number memory scan.

| [1] ~ [0] | Enter the operating frequency or memory channel number. |
| [↑] | Sets a MHz digit. |
| [CE] | Clears entered digits during frequency input. |
| [M-CH] | Sets the memory channel using the entered number. |
| [ENT] | Sets the operating frequency using the entered frequency. |
3 TUNING STEP SWITCHES [SLOW]/[FAST] (p. 34)
Select the main dial step increments in 10 Hz, 100 Hz, 1 kHz, 5 kHz, 9 kHz, 10 kHz, 12.5 kHz, 20 kHz, 25 kHz or 100 kHz steps.

3 SPEECH SWITCH [SPEECH] (p. 65)
Announces the operating frequency with a synthesized voice.
- An optional UT-36 VOICE SYNTHESIZER UNIT is needed for operation.

4 MAIN DIAL (p. 34)
Sets the operating frequency; changes programmed contents on the function screen.

4 LOCK SWITCH [LOCK] (p. 10)
Deactivates the main dial and some other switches.
Switch function is selected by internal [LOCK] switch located under the hatch cover.

4 FILTER WIDTH SWITCHES (p. 36)
Set the IF filter to a wide, middle or narrow width.
- In WFM mode, filter width is fixed even if the switches are changed.
- In FM mode, [WIDE] cannot be selected below 30 MHz.

4 IF SHIFT CONTROL [IF SHIFT] (p. 37)
Electronically shifts the IF frequency to reduce interference from adjacent frequency signals.

4 NOTCH CONTROL [NOTCH] (p. 37)
Adjusts the notch filter frequency to remove a beat signal.
- Push the [NOTCH] switch to use this control.

4 MEMORY BANK SWITCHES [DOWN]/[UP] (p. 39)
Change memory channels up or down in 100 channel steps.

4 MEMORY WRITE SWITCH [WRITE] (p. 41)
Stores the displayed contents (frequency, mode, filter width and tuning step) into the selected memory channel.
- Push and hold this switch to write a memory.

4 MEMORY CHANNEL SELECTOR [ON UP] (p. 39)
Selects a memory channel.

4 MEMORY CLEAR SWITCH [CLEAR] (p. 43)
Clears the contents from the selected memory channel.
- To clear the memory, push and hold this switch.

4 MHz UP/DOWN SWITCHES [DOWN]/[UP] (p. 34)
Change the operating frequency in 1 MHz steps.

4 NOTCH SWITCH [NOTCH] (p. 37)
Activates the notch filter circuit. Use together with the [NOTCH] control.
- No effect in FM and WFM modes.
2 CONTROL FUNCTIONS

2-2 REAR PANEL

1. DC-DC POWER SOCKET
   Accepts a regulated 13.5 ~ 15 V DC input. This socket does not accept voltage from a non-regulated power source such as a vehicle's battery.
   - Some versions do not have this socket.

2. 30 MHz ~ 1000 MHz ANTENNA CONNECTOR (p. 26)
   Connects a 50 Ω 30 ~ 1000 MHz antenna with a type-N connector. This connector is automatically selected when operating in 30 ~ 1000 MHz.

3. 1000 MHz ~ 2000 MHz ANTENNA CONNECTOR (p. 26)
   Connects a 50 Ω 1 ~ 2 GHz antenna with a type-N connector. This connector is automatically selected when operating in 1000 ~ 1999 MHz.

4. GROUND TERMINAL [GND] (p. 26)
   Connect this terminal to ground using the heaviest gauge wire or strap available, and make the connection as short as possible.

5. HF ANT 1 CONNECTOR [HF ANT 1] (p. 26)
   Connects a 50 Ω HF antenna with a PL-259 connector. This connector is used when operating below 30 MHz. See 6 [HF ANT SW].

6. HF ANTENNA SWITCH [HF ANT SW]
   Selects connections at [HF ANT 1] or [HF ANT 2] when operating below 30 MHz.

<table>

</tr>
</tbody>
</table>

7. ANTENNA SELECTOR VOLTAGE OUTPUT JACK [ANT SEL] (p. 26)
   Outputs 13.8 V DC (max. 100 mA) when the [ANTENNA] switch on the front panel is ON. Use for an external preamplifier or antenna selector, if desired.

8. HF ANTENNA 2 JACK [HF ANT 2] (p. 26)
   Connects a high impedance HF antenna such as a long wire antenna with an RCA jack (400 ~ 500 Ω). This connector is used when operating below 30 MHz. See 6 [HF ANT SW] above.

9. SPARE JACK [SPARE]
   No connection.

10. IF OUTPUT JACK [IF OUT]
    Outputs a 10.7 MHz IF signal.
    Output level is the same level as an antenna input signal or below (when the AGC function is activated or the attenuator is ON.)
1. **ACC SOCKET [ACC] (p. 30)**
   Input and output connections for an external terminal unit for use with data communications such as RTTY, FAX, etc.

2. **DATA INPUT SOCKET [DATA IN] (p. 30)**
   - Accepts ASCII code input at the RS-232C level for display on the terminal monitor screen.
   - Outputs CRT monitor signals.

3. **VIDEO INPUT JACK [VIDEO-IN] (p. 29)**
   Accepts video signals (NTSC system) for display on the CRT display when the [DISPLAY] switch is ON.

4. **VIDEO OUTPUT JACK [OUT-VIDEO] (p. 28)**
   Outputs video signals when TV frequencies with WFM mode are received. Either the NTSC or PAL system can be accepted depending on the version.
   - The France version does not output video signals.

5. **LINE OUT JACK [LINE OUT] (p. 27)**
   Audio output jack for a tape recorder. The fixed audio output level is set for a tape recorder AUX jack.
   - See p. 65 Section 12 - 3 for voice synthesizer information.

6. **SPEECH OUTPUT JACK [SPEECH OUT] (p. 28)**
   Outputs an operating frequency with a synthesized voice when scan stops.
   - An optional UT-36 VOICE SYNTHESIZER UNIT is needed for operation.
   - Push IN the [REC SPEECH] switch to activate this jack.

7. **LINE MIX SWITCH [LINE MIX] (p. 65)**
   Inputs synthesized voice operating frequency information into the [LINE OUT] and [REC] jacks when scan stops.
   - An optional UT-36 VOICE SYNTHESIZER UNIT is needed for this function.
   - Push IN the [REC SPEECH] switch to use this switch.

8. **CI-V REMOTE CONTROL JACK [REMOTE] (p. 31)**
   Connects a personal computer via an optional CT-17 CI-V LEVEL CONVERTER for external control of the frequency, audio level, etc.

9. **RECORDER REMOTE JACK [REMOTE] (p. 27)**
   Shorts when the squelch opens. This jack is used for controlling the tape running of a tape recorder when you wish to record the receive audio.

10. **EXTERNAL SPEAKER JACK [EXT SP] (p. 26)**
    Connect a 4 ~ 8 Ω speaker to this jack, if required.

11. **13.8 V DC OUTPUT JACK [DC] (p. 26)**
    Outputs a regulated 13.8 V DC (max. 100 mA).

12. **FUSE HOLDER [FUSE] (p. 62)**
    Holds the specified 2 A fuse for internal AC power supply protection. See p. 62 for details.

13. **AC POWER SOCKET [AC]**
    Connects the supplied AC power cable to a domestic AC outlet.
2 CONTROL FUNCTIONS

2-3 CRT DISPLAY

1 MODE INDICATOR
Indicates operating mode.
- The [MODE] switches located left of the keyboard select an operating mode.
- WFM mode cannot be selected below 30 MHz.

2 IF FILTER WIDTH INDICATOR (p. 36)
Indicates the width of the IF filter being used: wide, middle or narrow.
- The [FILTER WIDTH] switches located at the top right of the front panel select the desired filter width.
- In FM mode, "WIDE" cannot be selected below 30 MHz.

3 SELECT NUMBER INDICATOR (p. 53)
Indicates the programmed number for selected number memory scan.
- The select number is programmed in the memory list screen.

4 BANK INDICATOR (p. 40)
Indicates memory bank status "BANK" or "NO-BANK."
- Memory bank status is selected in the memory bank status screen.
- Memory scan bank and the priority scan bank differ from this indicator.

5 MEMORY CHANNEL READOUT (p. 39)
Shows the selected memory channel number.
- The memory list screen provides original memory contents checking, even if you have changed the frequency on the selected memory channel.

6 TUNING STEP READOUT (p. 34)
Shows the selected tuning step.
- The [SLOW] and [FAST] switches select the desired tuning step.

7 CLOCK READOUT (p. 55)
Shows the time of clock 1 when a functional screen is selected.
- When either the menu 1, menu 2, or clock & timer screen is selected, the times of clock 1 and 2 are shown in the original area.

8 TIMER INDICATOR (p. 56)
"TIMER" appears when the daily timer is set and the [TIMER] switch is OFF.
"SLEEP" appears when the sleep timer is set and the [TIMER] switch is ON.
"ALARM" appears when the sleep or daily timer is set and the [TIMER] switch is OFF.
No indicator appears when the daily timer is set out of the setting time range and the [TIMER] switch is OFF.

9 FUNCTION SWITCHES GUIDE (pgs. 11 ~ 23)
Indicates the function of the CRT MULTI-FUNCTION SWITCHES.

10 SCANNING CONDITION READOUT (pgs. 47 ~ 54)
Appears while scanning and displays the operating condition of a scan.
- The readout will disappear approx. 1 second after a [SCAN] switch is pushed, when scanning cannot be activated (e.g., a programmed scan edge is not programmed).

11 FREQUENCY READOUT
Shows the operating frequency with 10 Hz step accuracy.
2-4 HATCH COVER

① MAIN DIAL CLICK SWITCH [CLICK]
Turns ON and OFF the main dial click function.

AUTO: Main dial click automatically functions when the tuning step is more than 5 kHz or when the main dial is used with switches [F-1] ~ [F-6].
OFF: Main dial click does not function regardless of tuning step or some switches.

② LOCK SWITCH [LOCK]
Selects the function of the [LOCK] switch on the front panel.

DIAL: Locks only the main dial.
PANEL: Locks the main dial and the following switches:

③ SPACE FOR OPTIONAL UT-36 VOICE SYNTHESIZER UNIT [UT-36] (p. 65)
Install an optional JT-36 VOICE SYNTHESIZER UNIT here, if desired.

④ CONNECTORS FOR UT-36 (p. 65)
Connect these connectors when installing an optional UT-36.

⑤ CLOCK BATTERY (p. 61)
Lithium battery for clock operation. The battery is activated when power is OFF.
3 CRT DISPLAY SCREEN MENU

3-1 SCREEN MENU CONSTRUCTION

The 17 multi-function screens of the CRT display are used together with the CRT MULTI-FUNCTION switches. Choose the desired screen using these charts.

All screens including "MENU" return to the menu 1 screen by pushing [F-6] "MENU."
All screens including "MENU" return to the menu 1 screen by pushing [F-6] "MENU."

3 CRT DISPLAY SCREEN MENU

3-4 SCAN CONDITION SCREENS

(1) MEMORY SCAN CONDITION SCREEN

3 scan condition screens are available corresponding to 7 different scans.

Setting conditions for memory scan, selected mode memory scan and selected number memory scan.

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
</tr>
</thead>
</table>
| "BANK" [F-1] | Sets the memory bank status of memory scans (includes selected mode and number memory scans) to "BANK" or "NO-BANK."
| "M 1" [F-2] | To set a memory scan edge, push and hold the switch then rotate the main dial. |
| "M 2" [F-3] | To set the other edge of "M1," push and hold the switch and rotate the main dial. |
| "SEL-N" [F-4] | To program a number in selected number memory scan, push and hold the switch then rotate the main dial. |
| "SET 2" [F-5] | Accesses the programmed scan condition screen. |
| "MENU" [F-6] | Returns to the menu 1 screen. |

(2) PROGRAMMED SCAN CONDITION SCREEN

Sets conditions for programmed scan and auto memory write scan.

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;MO TS&quot; [F-1]</td>
<td>To set a mode and tuning step for programmed scan, push the switch then push a [MODE] switch and a [TUNING STEP] switch.</td>
</tr>
<tr>
<td>&quot;GROUP&quot; [F-2]</td>
<td>To select a programmed scan group from OP ~ 9P, push and hold the switch then rotate the main dial.</td>
</tr>
<tr>
<td>&quot;EDGE&quot; [F-3]</td>
<td>To set an edge of programmed scan, push the switch then enter the desired edge frequency using the keyboard.</td>
</tr>
<tr>
<td>&quot;SET 3&quot; [F-5]</td>
<td>Accesses the ΔF/priority scan condition screen.</td>
</tr>
<tr>
<td>&quot;MENU&quot; [F-6]</td>
<td>Returns to the menu 1 screen.</td>
</tr>
</tbody>
</table>

To access this screen from MENU 1, push [F-1] then push [F-5] until this screen appears. (p. 51)
(3) \( \Delta F \) AND PRIORITY SCAN
CONDITION SCREEN

Sets conditions for \( \Delta F \) scan and priority scan.

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;( \Delta F ) F&quot; [F-1]</td>
<td>Selects the center frequency of ( \Delta F ) scan to fixed or variable.</td>

<tr>
<td>&quot;MENU&quot; [F-6]</td>
<td>Returns to the menu 1 screen.</td>
</tr>
</tbody>
</table>
3-16 DATA FORMAT SCREEN

To access this screen from MENU 1, push [F-6] "MENU" then [F-1] "TERM" then [F-3] "FORMAT." (p. 29)

3-17 CI-V CONDITION SCREEN

To access this screen from MENU 1, push [F-6] "MENU" then push [F-2] "CI-V." (p. 31)

Sets the data length, baud rate and line feed command for the terminal monitor screen.

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;BIT&quot; [F-1]</td>
<td>To select a character length of 7 or 8 bits, push and hold the switch then rotate the main dial.</td>
</tr>
<tr>
<td>&quot;BAUD&quot; [F-2]</td>
<td>To select the baud rate, push and hold the switch then rotate the main dial.</td>
</tr>
<tr>
<td>&quot;CODE&quot; [F-3]</td>
<td>To select the line feed command, CR or CR + LF, push and hold the switch then rotate the main dial. CR: carriage return LF: line feed</td>
</tr>
<tr>
<td>&quot;SET&quot; [F-6]</td>
<td>Returns to the terminal monitor screen.</td>
</tr>
</tbody>
</table>

Sets the CI-V remote control conditions.

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;DE/U&quot; [F-1]</td>
<td>Selects the standard CI-V condition for the IC-R9000 or user programmed condition. To select a default or user programmed condition, push and hold the switch then rotate the main dial.</td>
</tr>
<tr>
<td>&quot;ADDR&quot; [F-2]</td>
<td>To select the address number of the &quot;USER&quot; area, push and hold the switch then rotate the main dial. 01H ~ 7FH address numbers can be provided.</td>
</tr>
<tr>
<td>&quot;BAUD&quot; [F-3]</td>
<td>Select the baud rate of the &quot;USER&quot; area, push and hold the switch then rotate the main dial.</td>
</tr>
<tr>
<td>&quot;TRCV&quot; [F-4]</td>
<td>To turn the transceive function ON and OFF, push and hold the switch then rotate the main dial.</td>
</tr>
<tr>
<td>&quot;731&quot; [F-5]</td>
<td>When operating the transceive function with the IC-735, set the &quot;731&quot; parameter to the &quot;WITH&quot; condition. To set the &quot;731&quot; parameter, push and hold the switch then rotate the main dial. Data length: IC-735 4 bytes, another radio 5 bytes</td>
</tr>
<tr>
<td>&quot;MENU&quot; [F-6]</td>
<td>Returns to the menu 1 screen.</td>
</tr>
</tbody>
</table>
3 CRT DISPLAY SCREEN MENU

3-18 FSK MODE SELECT SCREEN

Selects one of 4 different mark and space frequency combinations for FSK corresponding to the frequency of the transmit station. An external demodulator is necessary for FSK operation.

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;CCIR&quot; [F-1]</td>
<td>Use for RTTY reception with the CCIR system. Mark freq.: 1615 Hz Space freq.: 1785 Hz Shift width: 170 Hz</td>
</tr>
<tr>
<td>&quot;LOW&quot; [F-2]</td>
<td>Use for RTTY reception with a system known as &quot;LOW TONE&quot; in some European countries. Mark freq.: 1440 Hz Space freq.: 1270 Hz Shift width: 170 Hz</td>
</tr>
<tr>
<td>&quot;HIGH&quot; [F-3]</td>
<td>Use for normal RTTY reception. Mark freq.: 2120 Hz Space freq.: 2290 Hz Shift width: 170 Hz</td>
</tr>
<tr>
<td>&quot;FAX&quot; [F-4]</td>
<td>Use for FAX reception. Black freq.: 1500 Hz White freq.: 2300 Hz Shift freq.: 800 Hz</td>
</tr>
<tr>
<td>&quot;MENU&quot; [F-6]</td>
<td>Returns to the menu 1 screen.</td>
</tr>
</tbody>
</table>

NOTE: The mark and space frequencies are 5 Hz off frequency when operating in "HIGH" and "LOW." This condition does not affect normal operations.

3-19 BANK STATUS SCREEN

Sets the bank status of the memory channel, memory scan and priority scan to "BANK" (separated by 10 groups) or "NO-BANK" (not separated).

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;M-CH&quot; [F-1]</td>
<td>Sets memory channels to &quot;BANK&quot; or &quot;NO-BANK.&quot;</td>
</tr>
<tr>
<td>&quot;MEMO&quot; [F-2]</td>
<td>Sets the memory scan range in a bank or over the bank. This can also be set in the memory scan condition screen.</td>
</tr>
<tr>
<td>&quot;Prio&quot; [F-3]</td>
<td>Sets the priority channel in a bank or over the bank. This can also be set in the priority/△F scan condition screen.</td>
</tr>
<tr>
<td>&quot;MENU&quot; [F-6]</td>
<td>Returns to the menu 1 screen.</td>
</tr>
</tbody>
</table>

To access this screen from MENU 1, push [F-6] "MENU" then push [F-3] "FSK."

To access this screen from MENU 1, push [F-6] "MENU" then push [F-4] "BANK." (p. 40)
4-1 UNPACKING

After unpacking, immediately describe any damage to the delivering carrier or dealer. Keep the shipping cartons. For a description and diagram of accessory equipment included with the IC-R9000, see UNPACKING on the inside front cover.

4-2 SELECTING LOCATION

Select a location for the receiver with space for thorough air circulation and access to the front and rear panels. Keep away from extreme heat, cold, vibrations and electromagnetic sources.

4-3 ANTENNA

Antennas play a very important role in receiver operation. If the antenna is poor, your receiver cannot give you the best performance.

The IC-R9000 requires at least 3 antennas for full coverage 100 kHz ~ 2000 MHz. Select an antenna, such as a well-matched 50 Ω antenna and feedline. When you wish to use a long wire antenna for short wave bands, use one as long as possible (at least 10 m, 32.8 ft).

4-4 GROUNDING

To prevent accidents involving electricity and interference from a transceiver, ground the receiver through the [GND] terminal on the rear panel.

For best results, connect a heavy gauge wire or strap to a cold water pipe or long earth-sunk copper rod. Make the distance between the [GND] terminal and ground as short as possible.

WARNING: NEVER use a gas pipe or electrical conduit pipe for grounding.
4 INSTALLATIONS

4-5 ANTENNA CONNECTORS

(1) TYPE-N CONNECTOR INSTALLATION

1) Slide the nut, washer, rubber gasket and clamp over the coaxial cable. Cut the end of the cable evenly.

2) Strip the cables and fold the braid back over the clamp as shown at left.
   - The clamp end should be flush with end of the vinyl jacket.
   - Evenly trim the braid end.

3) Soft solder the center conductor. Install the center conductor pin and solder it.

4) Carefully slide the plug body into place aligning the center conductor pin on the cable. Tighten the nut onto the plug body.
   - Be sure the center conductor is the same height as the plug body.

(2) PL-259 CONNECTOR INSTALLATION

1) Slide the coupling ring over the coaxial cable. Strip the cable jacket only and soft solder.
   - Keep the jacket for soft soldering.

2) Strip the cable as shown in the diagram at left. Tin the center conductor the entire length of the exposed braid.

3) Slide the connector body over the cable and solder as shown at left.

4) Screw the coupling ring onto the connector body.

4-6 HANDLES AND STANDS

- RACK MOUNTING HANDLES
  Remove the 4 screws from both sides of the front panel, then attach the rack mounting handles to the sides of the receiver using the unpacked screws.

- RUBBER STANDS
  The rubber stands on the bottom of the IC-R9000 give the receiver 2 selectable angles.

- REAR STANDS
  Attach the rear stands using the supplied screws, if desired. The rear stands allow you to set the receiver facing up or to protect the connectors on the rear panel.
4-7 CONNECTIONS

30 MHz ~ 1000 MHz

1000 MHz ~ 2000 MHz

100 kHz ~ 30 MHz

Refer to Section 5-1 for details.

When operating with 13.8 V DC power supply. Accepts only regulated power source. (Some versions do not have.)

To domestic AC outlet

13.8 V DC output

100 mA max.

SP-20 EXTERNAL SPEAKER

(Optional)

The SP-20 has audio network filters.

Refer to Section 5-4 (p. 30) for details.

GND (See p. 24)

When [ANTENNA] switch is ON:

13.8 V DC output

100 mA max.

[REMOTE] Transceive function for connection with other Icom transceivers or receivers.

Computer control connection through CT-17 CI-V LEVEL CONVERTER (optional).

CT-17
5-1 TAPE RECORDER CONNECTIONS

(1) RECORDING FROM THE FRONT PANEL

You can easily record audio through the [REC] jack on the front panel. Audio output level is fixed for the AUX jack of a tape recorder, regardless of the [AF GAIN] position.

When an optional UT-36 VOICE SYNTHESIZER UNIT is installed, the synthesized voice announces the frequency the scan has stopped on. Refer to p. 65 Section 12 - 3 for details.

(2) RECORDING WITH THE REMOTE CONTROL

The [REC REMOTE] jack shorts when the receiver is ON and the squelch is open. Activates a tape recorder with the daily timer and allows recording only when a signal opens the squelch.

- The Voice Scan Control (VSC) function (p. 46) and auto memory write scan (p. 54) are helpful for making the desired recording.
(3) SEPARATELY RECORDING AUDIO AND FREQUENCY

An optional UT-36 VOICE SYNTHESIZER UNIT is needed for this operation.

When using a stereo tape recorder for recording, received audio and a frequency with a synthesized voice can be separately recorded.

When recording this way, you can search ahead of the audio signal recorded in the tape recorder using the frequency recording channel search.

- The Voice Scan Control (VSC) function (p. 46) and auto memory write scan (p. 54) are helpful for making the desired recording.

5-2 MONITOR DISPLAY CONNECTION

To the AUX IN jacks L and R.

The REMOTE jack

[LINE OUT]

When you wish to control a tape recorder via the REMOTE jack.

[REC REMOTE]

[SPEECH OUT]

- Push IN [REC SPEECH] on the front panel.
- Set OFF [LINE MIX] on the rear panel.

A monitor display can be connected to the IC-R9000 via the [DATA IN] socket. You can monitor the CRT display information on a large size display.

The IC-R9000 includes a picture signal decoder. When connecting a TV set equipped with a VIDEO IN jack, you can monitor TV signals such as amateur TV.

- This connection allows to monitor the display screen menu.
- Only the NTSC system can be connected.

This connection allows to monitor TV signals. Either the NTSC or PAL system can be monitored depending on the version.

NOTE: France version cannot monitor.
5 SYSTEM INTERCONNECTIONS

5-3 FSK TERMINAL UNIT

If you require FSK reception such as RTTY or FAX, external demodulator is necessary. Connect the AFSK input jack of the demodulator to the [ACC] socket or the [LINE OUT] jack on the rear panel.

If the demodulator has ASCII code (RS-232C level) output or video output, the demodulated signal can be displayed on the CRT display.

To indicate the FSK signal. Connect one of 3 output terminals when the demodulator has no display.

DATA FORMAT SCREEN

When an external FSK demodulator has ASCII code (RS-232C level) output, the terminal monitor screen can be used for FSK monitoring. Format the monitor system to the external demodulator using the data format screen.

1) Selects the data format screen:
   - When the menu 2 screen is displayed, push [F-1] “TERM,” and then push [F-3] “FORMT.”

2) To select 7 or 8 bit data, push and hold [F-1] “BIT” then rotate the main dial.

3) To select the baud rate, push and hold [F-2] “BAUD” then rotate the main dial.

4) To select the line feed command, push and hold [F-3] “CODE” then rotate the main dial.
   - CR: carriage return  LF: line feed

6) When no ASCII code is received, the demonstration operates on the screen. As soon as the ASCII code is received, the screen clears and displays the incoming data.
## 5-4 ACCESSORY SOCKET INFORMATION

![PIN NUMBERS](image_url)

5 SYSTEM INTERCONNECTIONS

5-5 REMOTE JACK INFORMATION

The [REMOTE] jack on the rear panel is an input/output port for control of the IC-R9000 frequency, mode, memory channel, etc. Using the [REMOTE] jack, the IC-R9000 can be controlled by a personal computer* or another Icom CI-V transceiver.

* An optional CT-17 CI-V LEVEL CONVERTER is necessary. Use a personal computer equipped with an RS-232C serial output port. See basic sample software descriptions in the CT-17 instruction manual.

TRANSCIEVE FUNCTION
An Icom CI-V transceiver or radio can be connected via the [REMOTE] jack. The frequency and mode become the same when either radio is changed.

Connect ACC socket pin 3 when the IC-R9000 is connected with a transceiver. This connection mutes the IC-R9000 when the transceiver transmits.

CT-17 CONNECTION
Up to 4 Icom CI-V transceivers can be connected to a personal computer via the CT-17.

The IC-R9000 has standard default data for CI-V control. However, this data can be changed using the CI-V condition screen if desired.

1) Select the CI-V condition screen:
   - Push [F-2] "CI-V" when the menu 2 screen is displayed.

2) Push and hold [F-1] "DE/U" then rotate the main dial to select the "USER" condition for changing data.

3) To change the address number, push and hold [F-2] "ADDR" then rotate the main dial.
   - Address numbers 01H ~ 7FH can be selected.

4) To change baud rates, push and hold [F-3] "BAUD" then rotate the main dial.
   - Baud rates at 300, 1200, 4800 and 9600 bps can be selected.

5) To turn OFF the transceive function, push and hold [F-4] "TRCV" then rotate the main dial.

6) To change the frequency data length to 4 bytes, push and hold [F-5] "731" then rotate the main dial.
   - "WITH" : Transceive with the IC-735.
   - "" : Transceive with another Icom radio.

7) Push [F-6] "MENU" to return to the menu 1 screen.
6-1 INITIAL SETTINGS

**NOTE:** Follow all instructions in Section 4 before operating the receiver.

1) Be sure the [POWER] switch is in the out position, then connect the AC cable into a domestic AC power outlet.

2) Be sure antennas are securely connected to the proper antenna connectors.
   • 3 antennas are necessary for all band coverage.

3) Be sure the receiver is grounded through the [GND] terminal.

4) Push the [POWER] switch IN to turn ON power.

5) Set switches and controls as shown in the table below.

6 BASIC OPERATION

6-2 FREQUENCY SETTINGS

There are 2 ways to set a frequency: with the main dial or keyboard. Use both in combination for quick tuning.

NOTE: DO NOT change the memory channel when setting the frequency with the main dial, otherwise the set frequency will be erased.

If you need to change the memory channel, write the frequency into the memory channel before changing the memory channel. See p. 41 for memory writing information.

(1) USING THE KEYBOARD

1) Push IN the [POWER] switch to turn ON power.

2) Enter the desired frequency using the digit key.
   • Push the [x] key after entering the 1 MHz digit and before entering the 100 kHz digit.
   • The CRT display shows the entered number.

3) When entering a wrong number, push the [CE] key to retrieve the previous frequency.

4) Push [ENT] to store the entered frequency.
   • To enter 0 in succession, push [ENT] before entering all digits.

NOTE: When selecting the programmed scan condition screen, the operating frequency may not be entered with the keyboard.

(EXAMPLES)

• Setting frequency at 145.0 MHz.

| Push keys | 1 | 4 | 5 | ENT |
| Frequency readout | 1.45 | 145,000.00 |

• Setting frequency at 145.5 MHz.

| Push keys | 1 | 4 | 5 | x | 5 | ENT |
| Frequency readout | 1.45 | 145. | 145. | 5 | 145.500.00 |

• Setting frequency at 300 kHz (0.3 MHz).

| Push keys | 0 | x | 3 | ENT |
| Frequency readout | 0. | 0. | 3 | 0.300.00 |

• Changing frequency from 1296.550 MHz to 1296.750 MHz.

| Push keys | 1296.550.00 | x | 7 | 5 | ENT |
| Frequency readout | 1296.550.00 | 1296. | 1296. | .75 | 1296.750.00 |
(2) USING THE MAIN DIAL

1) Push IN the [POWER] switch to turn ON power.

2) Set the desired band using the keyboard or the [MHz] switches, [DOWN] or [UP].

3) Set the desired tuning step using the [TUNING STEP] switches, [FAST] or [SLOW].
   - 10 Hz, 100 Hz, 1 kHz, 5 kHz, 9 kHz, 10 kHz, 12.5 kHz, 20 kHz, 25 kHz and 100 kHz are available.

4) Rotate the main dial to set the desired frequency.

   The main dial click is automatically turned ON when a tuning step greater than 5.0 kHz is selected.

   This dial click function can be turned OFF. See p. 10 Section 2 - 4 for details.

   1. The following procedures clear the frequencies below the tuning step:
      1) Set the frequency with the keyboard.
      2) Change the tuning step.
      3) Rotate the main dial.

   2. The following procedures hold the frequencies below the tuning step:
      1) Change the tuning step.
      2) Set the frequency with the keyboard.
      3) Rotate the main dial.

   3. When the tuning step is not changed, the frequencies below the tuning step are held.

[EXAMPLES]

6 BASIC OPERATION

6-3 RECEIVING

[METER] [CENTER] can be used in FM or WFM. (p. 36)
[AGC] Set [SLOW] or [FAST] (p. 38)
The spectrum scope screen is helpful for signal checking. (p. 18)
[IF SHIFT] Center position (p. 37)
[NOTCH] OFF (p. 37)
[NOISE BLANKER] OFF (p. 38)

[RF GAIN] Varies the RF amplifier gain. This control is especially useful when [AGC] is OFF.
[ATT 10 dB] [ATT 20 dB] Prevents the RF amplifier from distortion when excessively strong signals are received.
[AFC] Activates in FM or WFM only. (p. 36)

1) Set switches and controls as described in Section 6 - 1.
2) Push a [MODE] switch to set the operating mode.
   • See MODE SELECTION at right (on p. 36).
3) Set the [SQUELCH] control to max. counterclockwise.
4) Adjust the [AF GAIN] control to the desired audio level.
5) Set the desired receive frequency using the keyboard and the main dial. See Section 6 - 2 for details.
   • When a signal is received, the meter shows the relative signal strength.
6) Select a filter width, wide, middle or narrow.
   • See FILTER SELECTION at right (on p. 36).
7) Rotate the [SQUELCH] control clockwise if you want to mute the audio noise.

Tech Talk from Icom

Q. What is AFC?

A. AFC means Automatic Frequency Control. The AFC circuit automatically compensates for a frequency when a receive frequency drifts or goes off frequency.

When the receiver receives an off frequency from the center of an FM signal, the received audio signals are distorted. The discriminator circuit outputs voltage which is different when the center frequency is received.

The AFC circuit in the IC-R9000 detects the output voltage from the discriminator circuit and applies the voltage to the CPU to change N-data for the PLL circuit. N-data will be changed until the center frequency is received.

Therefore, the operating frequency of the IC-R9000 is automatically adjusted to the center of a receive frequency by the AFC circuit.
MODE SELECTION

METER FUNCTIONS

ENTER METER (FM and WFM only)

The center meter allows you fine tuning since the meter shows the signal deviation from the center frequency.

The S-meter shows the squelch threshold point when the [SQUELCH] control is rotated clockwise. The S-meter shows the relative RF attenuation level when the [RF GAIN] control is rotated counterclockwise.

The S-meter may not operate when the [AGC] switches are set to the “OFF” position.
7-1 IF SHIFT

IF shift is a system designed to electronically shift the passband of frequencies that pass through the crystal filter.

IF shift is used to reduce interference from adjacent frequency signals.

• Rotate the [IF SHIFT] control either clockwise or counterclockwise to eliminate interference.

**NOTE:** IF shift does not function in FM and WFM modes.

7-2 NOTCH FILTER

The notch filter attenuates a particular frequency in the IF passband, such as that of an interference beat signal.

1) Push the [NOTCH] switch.

2) Rotate the [NOTCH] control to minimize interference.
7-3 AUTOMATIC GAIN CONTROL (AGC)

AGC holds audio output constant during fluctuations in signal strength. AGC keeps irritating background noise from being heard during the short pauses in speech.

OFF POSITIONS:
Used when receiving a very weak signal located near stronger signals. In this case, the [RF GAIN] control is useful for reducing receive gain.
- The S-meter does not move when the AGC is set to OFF.
- The received audio may be distorted when a strong signal is received.

FAST POSITION:
Normally used when receiving a signal with short interval fading such as in CW or FSK mode, or when searching for a signal with the main dial.

SLOW POSITION:
Normally used when receiving a signal in SSB mode.

In FM, WFM or AM mode, use the "SLOW" or "FAST" positions.

The noise blanker effectively reduces interference from pulse-type noise such as car ignition systems and wide pulse-type noise known as "woodpecker" noise.

1) Push the [NB] switch ON.
2) Adjust the [NB LEVEL] control as required depending on the noise level.
3) To suppress "woodpecker" noise and other wide pulse-type noise, push the [NAR/WIDE] switch ON ("WIDE" is set).

NOTE: If you turn the [NB LEVEL] control too far clockwise, the audio output from the speaker may be distorted.

7-4 NOISE BLANKER

Tech Talk from Icom
Q. Why does the receiver need AGC?

A. AGC is necessary to output signals constantly from the speaker regardless of the strength of incoming signals.

Signals of varying strengths enter the receiver circuit through the antenna connector. In SSB or CW mode especially, signal strength changes a lot from the wave characteristics.

AGC reduces the receiver gain when a strong signal is received, preventing distortion of speaker output. After strong signals disappear the receiver gain returns to the original gain. AGC automatically controls the receiver gain.

AGC "slow" or "fast" selects the return speed of the receiver gain from the reduced gain to the original gain. By holding the receiver gain for short periods, AGC constantly emits receive signals from the speaker and signals can be comfortably heard.

One aspect of AGC is that very weak signals located near stronger signals may be blocked when the AGC is set in the "slow" or "fast" position. AGC is therefore equipped with an OFF position for times when you wish to receive very weak signals without reducing receiver gain.
8 MEMORY CHANNELS

8-1 MEMORY CHANNEL SELECTION

The IC-R9000 has a total of 1000 memory channels (10 groups of 100 memory channels) and 20 programmable scan edge channels separate from the memory channels. Each memory channel stores a frequency, mode, filter width and tuning step.

Memory channels 800 ~ 999 are used for auto write memory scan. See p. 54 for details.

1) Push a [MEMORY BANK] switch, [DOWN] or [UP] to select the desired memory bank (100-unit channel number).

2) Rotate the [DN UP] selector to select the desired memory channel.
   - When "BANK" is displayed on the right top of the CRT display, the [DN UP] selector cannot select memory channel in another memory bank. See p. 40 (4) MEMORY BANK for details.

(1) USING THE CHANNEL SELECTOR

[MEMORY BANK]

(DN UP)

(2) USING THE KEYBOARD

1) Enter the desired memory channel number using the keyboard.

2) Push the [M-CH] key.
   - When entering more than 3 digits, the last 3 digits are entered.

[EXAMPLES]

- Selecting memory channel 123.

<table>
<thead>
<tr>
<th>Push keys</th>
<th>Frequency readout</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 2 3 M-CH</td>
<td>1.23 000eh 10.000.00 123eh</td>
</tr>
</tbody>
</table>

- Selecting memory channel 21.

<table>
<thead>
<tr>
<th>Push keys</th>
<th>Frequency readout</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 1 M-CH</td>
<td>.21 123eh 10.000.00 021eh</td>
</tr>
</tbody>
</table>

- When more than 3 digits are entered.

<table>
<thead>
<tr>
<th>Push keys</th>
<th>Frequency readout</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 2 3 M-CH</td>
<td>1.234.56 021eh 10.000.00 456eh</td>
</tr>
</tbody>
</table>
(3) USING THE MEMORY LIST SCREEN

The memory list screen shows 10 of the 1000 memory channels at one time.

1) Access the memory list screen:
   - Push [F-2] "MEMO" when the menu 1 screen is displayed.

2) Select the desired memory bank (100-unit channel number) using the [MEMORY BANK] switches, [DOWN] or [UP].
   - See (4) MEMORY BANK below for details.

3) Push and hold [F-1] "ROLL" or [F-2] "SET" then rotate the main dial.
   - See the displays below for details.

4) To return to the menu 1 screen, push [F-6] "MENU."

- "ROLL" and "SET"

- "ROLL" is helpful when checking the memory channels while keeping the operating frequency.
- Memory writing and clearing can be performed on the memory list screen.

(4) MEMORY BANK

1000 memory channels are separated by 10 groups (banks) for quick searching in a group. The status of "BANK" or "NO-BANK" is displayed on the right top of the CRT display.

- Select "BANK" when you require memories to be separated.
- Select "NO-BANK" when you do not require memories to be separated (every memory channel can be scrolled without using the [MEMORY BANK] switches).

1) Access the memory bank status screen:
   - Push [F-4] "BANK" when the menu 2 screen is displayed.

2) Push [F-1] "M-CH" to select "BANK" or "NO-BANK" status.

3) Push [F-6] "MENU" to return to the menu 1 screen.

**NOTE:** The memory scan bank and the priority scan bank can also be set in the scan condition screen. Refer to pgs. 49 and 51.
There are 2 ways to write a memory channel.

1) Writing in the operating frequency section. You can perform memory writing when any screen is selected. However, the original memory contents are erased.

2) Writing in the memory list screen. Original memory contents are not erased.

1) Select the memory channel:
   - Use the [DN UP] selector or the keyboard. See p. 39 for details.

2) Set the frequency, mode, filter width and tuning step.

3) Push and hold the [WRITE] switch until the receiver emits 3 beeps.
   - Memory writing is completed.

1) Set the frequency, mode, filter width and tuning step.

2) Access the memory list screen:
   - Push [F-2] "MEMO" when the menu 1 screen is displayed.

3) Push and hold [F-1] "ROLL" then rotate the main dial to select the desired memory channel.

4) Push and hold the [WRITE] switch until the receiver emits 3 beeps.
   - Memory writing is completed without erasing original contents.

Memory channel selected "ROLL" and the main dial.

The contents are written into the memory list screen.
8-3 SELECTED MEMORY NUMBER

Selected memory numbers are used for the selected number memory scan described on p. 53. Scanning operates only on channels programmed with the same number. 9 selected memory numbers are available for scanning group separation.

1) Access the memory list screen.
   - Push [F-2] “MEMO” when the menu 1 screen is displayed.

2) Select the memory channel to program the selected memory number:
   - Use [F-1] “ROLL” or [F-2] “SET” with the main dial.

3) Push [F-4] “SEL” to program the selected memory number.
   - To change the number, push and hold [F-4] “SEL” then rotate the main dial.
   - The programmed scan edge channels (1P1 ~ 9P2) do not accept writing.

4) To erase the number, push [F-4] “SEL” again.

The same selected memory numbers can be erased simultaneously in the memory list screen.

1) Set the memory bank: “BANK” or “NO-BANK” (p. 40).
   - “NO-BANK” : Erased in all memory channels.
   - “BANK” : Erased in the selected bank only.

2) Push and hold [F-4] “SEL” then rotate the main dial to select the desired number to be erased.

8-4 MEMORY NOTE

8 characters of the note can be written in each memory channel for your reference.

1) Access the memory list screen:
   - Push [F-2] “MEMO” when the menu 1 screen is displayed.

2) Select the memory channel to write a memory note:

3) Push [F-5] “NOTE” to access the memory note write screen.

4) Choose a character with the main dial.

5) Push [F-1] “ENT” to write the character.

6) Repeat steps 4 and 5 to write your desired note.
   - When wrong characters are written, pushing [F-5] “CE” clears all input then returns the screen to the memory list screen.

7) Use “<->”,””<->” and “SPACE” to move the cursor.

   - The screen returns to the memory list screen.
8 MEMORY CHANNELS

8-5 MEMORY CLEARING

There are 2 ways to clear a memory channel: clearing in the operating frequency section and in the memory list screen.

1) Select the memory channel to be cleared.
   • Use the keyboard or the [DN UP] selector.

2) Push and hold the [CLEAR] switch until the memory is cleared.

(1) IN THE OPERATING FREQUENCY SECTION

Keyboard

(CLEAR) [DN UP]

(2) IN THE MEMORY LIST SCREEN

1) Access the memory list screen:
   • Push [F-2] "MEMO" when the menu 1 screen is displayed.

2) Push and hold [F-1] "ROLL" then rotate the main dial to select the desired memory channel.

3) Push and hold the [CLEAR] switch until the memory on the memory list screen is cleared.
   • The memory on the operating frequency section is not erased.

---

MEMORY CLEARING IN THE MEMORY LIST SCREEN

Memory channel selected "ROLL" with the main dial.

The memory contents in the memory list screen are cleared.
8-6 MEMORY EDITOR FUNCTION

The memory editor function allows you to easily re-program the memory channels using copy, move and clear.

1) Access the memory list screen:
   - Push [F-2] "MEMO" when the menu 1 screen is displayed.

2) Push [F-3] "EDIT" to access the memory edit screen.

3) Select an edge of the memory channel area you wish to edit:
   - Use [F-1] "ROLL" with the main dial or the [MEMORY BANK] switches, [UP] or [DOWN].

4) Push and hold [F-2] "SET" then rotate the main dial to surround the memory channels.
   - The desired channel area lights with bright intensity.

5) Select the desired memory channel area you wish to move or copy.
   - Use [F-1] "ROLL" with the main dial or the [MEMORY BANK] switches, [UP] or [DOWN].
   - When you wish to clear the surrounded channels, skip to step 6.

6) Push and hold the desired key to edit:
   - [F-3] "CLEAR" : Clears the surrounded channels.
   - [F-4] "MOVE" : Moves the surrounded channels.
   - [F-5] "COPY" : Copies the surrounded channels.
   - [F-6] "END" : Cancels the memory editor function.
   - The end of the edited channels comes to the center of the memory list screen.

**CAUTION:** Other memory channels which you previously programmed here may be erased.

---

**EXAMPLE**

- Copy from memory channels 900 ~ 930 to 240 ~ 270.

---

The memory list screen.

Push [F-3] "EDIT."

The memory edit screen.

Push [F-5] "COPY."

Edited copy is completed.

9-1 PRE-OPERATION

(1) SCAN TYPES

**PROGRAMMED SCAN** (p. 47)

Scan edge
Lower freq. P1 or P2

Scan edge
Higher freq. P2 or P1

Repetively scans between two user-programmed scan edges. The scan edges can be programmed up to 10 groups (20 channels). You can select one of 10 groups to search for a signal.

**PRIORITY SCAN** (p. 49)

Receive frequency
Priority channel PR-CH

Watches a particular memory channel during operation. Priority channels can be set for one channel in each memory bank and for one channel that ignores the memory bank.

**ΔF SCAN** (p. 50)

Lower freq. Operating frequency Higher freq.

Repetively scans Δf width around an operating frequency.

**MEMORY SCAN** (p. 51)

Repeatedly scans all memory channels. The scanning range can be programmed.

**SELECTED MODE MEMORY SCAN** (p. 52)

Repeatedly scans memory channels with the same selected operating mode.

**SELECTED NUMBER MEMORY SCAN** (p. 53)

Repeatedly scans memory channels with the same programmed number.

**AUTO MEMORY WRITE SCAN** (p. 54)

Scans the same way as programmed scan. However, when a signal is received the received frequency and received time are automatically written in a memory channel of 900 ~ 999 in sequence.

The IC-R9000 has 7 different scan functions, providing tremendous scanning versatility at the touch of just a few switches.
2) VOICE SCAN CONTROL (VSC) FUNCTION

3) SCAN RESUME CONDITION

Switches for VSC function:
- [OFF]: Scanning does not resume while a signal is received. Resumes approx. 3 seconds after the signal disappears.
- [A]: Resumes scanning several seconds* after scanning stops. Scanning stops for several seconds* even if the signal disappears.
- [B]: Resumes scanning several seconds* after scanning stops. Scanning resumes approx. 3 seconds after the signal disappears.
- [∞]: Cancels scanning when a signal is received.

*The [DELAY TIME] control adjusts delay time 3 ~ 20 seconds (until 30 sec. when the [REC SPEECH] switch is turned ON).

When a signal is received, the IC-R9000 controls the tape running of a tape recorder through the remote jack on both the IC-R9000 and the tape recorder. You can record the received signal even if you have left the receiver. See p. 27 for connection information.

4) TAPE RECORDER CONTROL

5) SCANNING WITH THE SPECTRUM SCOPE SCREEN

Tech Talk from Icom

Q: How does the IC-R9000 (Voice Scan Control) differ from former VSCs?

A: The IC-R9000 detects audio components in receive signals differently.

The IC-R9000 VSC detects both audio signal components and a variation of the received audio tone. Former VSCs detected only receive signals whether they included audio signal components or not.

Therefore, older receivers equipped with former VSCs do not resume scanning when they receive a signal modulated with no variation of the audio signal. Carrier waves with no audio signal or no variation of audio signals are always unwanted signals.

The IC-R9000, however, resumes scanning when it receives unwanted signals such as those mentioned above. The VSC turns ON because the IC-R9000 VSC detects variation of the audio signal.

The VSC starts to sample the received signal for one second when the scan stops. If the received signal includes audio signals and the tone of the audio signals changes, the scan stops on the frequency.

The new VSC system is therefore very useful for auto memory write scan or audio recording with a tape recorder during scanning.
9 SCANNING

9-2 PROGRAMMED SCAN

Programmed scan repeatedly scans between 2 user-programmed scan edges. The scan edges can be programmed up to 10 groups (20 channels). You can select one of 10 groups to search a signal.

(1) SETTING PROGRAMMED SCAN EDGES

**USING THE [WRITE] SWITCH**

<table>
<thead>
<tr>
<th>AM</th>
<th>MID</th>
<th>BANK</th>
</tr>
</thead>
<tbody>
<tr>
<td>108.000.00</td>
<td>1P1 CH</td>
<td>TS 25.0kHz</td>
</tr>
</tbody>
</table>

**USING THE SCAN CONDITION SCREEN**

There are 2 ways to program the scan edges: using the [WRITE] switch or using the scan condition screen.

Program a frequency, mode and tuning step on each scan edge channel (1P1 ~ 9P2) as you would write a memory channel. See p. 41 Section 8 - 2 MEMORY WRITING for details.

1) Access the scan condition screen:
   - Push [F-1] “SCAN” when the menu 1 screen is displayed.

2) Push [F-5] “SET 1” or “SET 2” until it becomes “SET 3.”
   - The programmed scan condition screen as shown in the diagram at left is selected.

3) Push and hold [F-2] “GROUP” then rotate the main dial to select the desired programmed scan group to be written.

4) Push [F-3] “EDGE.”
   - A programmed scan edge frequency lights with bright intensity.

5) Enter the scan edge frequency using the keyboard.

6) Repeat steps 4 and 5 to program the other side of the scan edge frequency.

7) Push [F-1] “MO TS” then push a MODE switch ([FM], [AM], etc.).

8) Push a [TUNING STEP] switch, [SLOW] or [FAST], to set the desired tuning step.

9) Push [F-6] “MENU” to return to the menu 1 screen.
(2) PROGRAMMED SCAN OPERATION

1) Select the desired resume condition. See p. 46 Section 9 - 1 (3) SCAN RESUME CONDITION.

2) Adjust the [SQUELCH] control to the threshold point.

3) Enter the desired scan group number using the keyboard.
   - If you do not enter the scan group number, the previous scan group is automatically used.

4) Push the [PROG] switch to start programmed scan.
   - Programmed scan does not activate when the programmed scan edges are not programmed.

5) Adjust the [SPEED] control to the desired scanning speed.

6) To stop scanning, push a [SCAN] switch ([PRI0], [PROG], etc.) or a CRT function switch ([F-1] ~ [F-6]).
   - The main dial also stops scanning.

---

9 SCANNING

9-3 PRIORITY SCAN

Priority scan watches a particular memory channel during operation. Priority channels can be set for one channel on each memory bank or for one channel that ignores the memory bank.

NOTE: The priority scan bank is separately set from the memory channel bank. “BANK” or “NO-BANK” indicated on the right top of the CRT display has no relation to the priority scan bank.

1) Access the scan condition screen:
   • Push [F-1] “SCAN” when the menu 1 screen is displayed.

2) Push [F-5] “SET 2” or “SET 3” until it becomes “SET 1.”
   • The ΔF/priority scan condition screen as shown in the diagram at left is selected.

3) Push [F-3] “BANK” to select the priority channel in the “BANK” or “NO-BANK” status.
   • The priority bank can also be selected in the bank status screen.

4) Push and hold [F-4] “PR-CH” then rotate the main dial to select the desired memory channel as a priority channel.

5) Push [F-6] “MENU” to return to the menu 1 screen.

(1) SETTING A PRIORITY CHANNEL

(2) PRIORITY SCAN OPERATION

While operating priority scan.
9-4 ΔF SCAN

ΔF scan scans a small amount of the frequency width around an operating frequency.

1) Access the scan condition screen:
   - Push [F-1] "SCAN" when the menu 1 screen is displayed.

2) Push [F-5] "SET 2" or "SET 3" until it becomes "SET 1."
   - The ΔF/priority scan condition screen as shown in the diagram at left is selected.

3) Push and hold [F-2] "△F W" then rotate the main dial to select the desired ΔF width (scanning range).
   - ΔF width can be selected in ±2.5, 5, 10, 20 or 50 kHz steps.

4) Push [F-1] "△F F" to select a fixed or variable ΔF scan center frequency.
   - Variable ("Center F" appears):
     ΔF scan operates around the operating frequency.
   - Fixed (frequency appears):
     ΔF scan operates around a fixed frequency even if the operating frequency is changed.

5) Push [F-6] "MENU" to return to the menu 1 screen.

1) Select the desired resume condition. See p. 46 Section 9-1 (3) SCAN RESUME CONDITION.

2) Adjust the [SQUELCH] control to the threshold point.

3) Set the tuning step using the [TUNING STEP] switches, [SLOW] or [FAST].
   - Be sure the tuning step does not exceed the scanning range.

4) Push the [△f] switch in the [SCAN] switches to start ΔF scan.
   - When the center frequency is fixed and the operating frequency exceeds the scanning range, ΔF scan does not activate.

5) Adjust the [SPEED] control to the desired scanning speed.

6) To stop scanning, push a [SCAN] switch ([PRIOR), [PROG], etc.) or a CRT function switch ([F-1]~[F-6]).
   - The main dial also stops scanning.
9 SCANNING

9-5 MEMORY SCAN

Memory scan repeatedly scans memory channels in a user-programmed scanning range. The scanning range can be programmed for each memory bank ("BANK") or for ignoring the memory bank ("NO-BANK").

NOTE: The memory scan bank is set separately from the memory channel bank. "BANK" or "NO-BANK" indicated on the right top of the CRT display has no relation to the memory scan bank.

1) Access the scan condition screen:
   - Push [F-1] when the menu 1 screen is selected.

2) Push [F-5] "SET 1" or "SET 3" until it becomes "SET 2."
   - The memory scan condition screen as shown in the diagram at left is selected.

3) Push [F-1] "BANK" to select the memory scan range in "BANK" or "NO-BANK."
   - The memory scan bank can also be selected in the bank status screen.

4) Select the desired memory bank (100-unit channel number) using the [MEMORY BANK] switches, [DOWN] or [UP] when "BANK" is selected in step 3.
   - When "NO-BANK" is selected, skip to step 5.

5) Push and hold [F-2] "M 1" then rotate the main dial to set a memory scan edge.

6) Push and hold [F-3] "M 2" then rotate the main dial to set the other side memory scan edge.

7) Push [F-6] "MENJ" to return to the menu 1 screen.

(2) SCAN OPERATION

1) Set the memory scan range. See (1) SETTING THE MEMORY SCAN RANGE above.

2) Select the desired resume condition. See p. 46 Section 9-1 (3) SCAN RESUME CONDITION.

3) Adjust the [SQUELCH] control to the threshold point.

   - At least 2 memory channels must be programmed in the selected memory scan range for scanning to operate.

5) Adjust the [SPEED] control to the desired scanning speed.

6) To stop scanning, push a [SCAN] switch ([PRLQ], [PROG], etc.) or a CRT function switch ([F-1]—[F-6]).
   - The main dial also stops scanning.
9-6 SELECTED MODE MEMORY SCAN

Selected mode memory scan repeatedly scans memory channels with the same selected operating mode. Scanning occurs in a bank or in all memory channels that can be selected by the memory scan bank.

1) Set the memory scan bank. See p. 51 Section 9-5 (1) SETTING THE MEMORY SCAN RANGE steps 1~4.
   *Memory scan edges do not function in selected mode memory scan.

2) Select the desired resume condition. See p. 46 Section 9-1 (3) SCAN RESUME CONDITION.

3) Adjust the [SQUELCH] control to the threshold point.

4) Select the desired mode to be scanned, FM, AM, USB, etc.

5) Push [MODE] in the [SCAN] switches to start selected mode memory scan.
   *At least 2 memory channels with the same mode must be programmed to operate scanning.

6) Adjust the [SPEED] control to the desired scanning speed.

7) To stop scanning, push a [SCAN] switch ([PRIOR], [PROG], etc.) or a CRT function switch ([F-1]~[F-6]),
   *The main dial also stops scanning.

---

Tech Talk from Icom

Q: Why is it so difficult to increase scan speed?

A: The most important factor determining scanning speeds is the PLL lockup time. The faster the lockup time the faster the scanning speed.

However, when lockup times increase, the quality of VCO output signals (C/N) decreases. Decreased signal quality means the scan may not stop when a signal is received. Lockup times and VCO signal quality therefore work against each other.

How to solve the problem? Icom found a way. By using the DDS (Direct Digital Synthesizer) in the PLL circuit, the PLL creates a very short lockup time.

Using the DDS, Icom succeeded in providing faster scanning speeds without decreasing the quality of VCO output signals. The scanning speed in the IC-R9000 is 13 channels/second or more — a speed at least twice as fast as former Icom equipment (not equipped with the DDS system). And you can be certain that the IC-R9000’s scan will stop when a signal is received.
9 SCANNING

9-7 SELECTED NUMBER MEMORY SCAN

Selected number memory scan repeatedly scans memory channels with the same programmed number. Scanning occurs in a bank or in all memory channels that can be selected by the memory scan bank.

To program a scan number into memory channels, see p. 42 Section 8.3 SELECTED MEMORY NUMBER.

(1) SELECTING A MEMORY SCAN NUMBER

Using the memory scan condition screen, select the number of the group to be scanned in selected number memory scan. The selected number can also be selected by pushing a digit key before starting or during scanning.

1) Access a scan condition screen:
   - Push [F-1] "SCAN" when the menu 1 screen is displayed.

2) Push [F-5] "SET 1" or "SET 3" until it becomes "SET 2."
   - The memory scan condition screen as shown in the diagram at left is selected.

3) Push and hold [F-4] "SEL-N" then rotate the main dial to select the selected number.

4) Push [F-6] "MENU" to return to the menu 1 screen.

(2) SCAN OPERATION

1) Push the scan number.

2) Push [SEL].

Selected number memory scan repeatedly scans memory channels with the same programmed number. Scanning occurs in a bank or in all memory channels that can be selected by the memory scan bank.

While operating selected number memory scan.

Using the memory scan condition screen, select the number of the group to be scanned in selected number memory scan. The selected number can also be selected by pushing a digit key before starting or during scanning.

1) Access a scan condition screen:
   - Push [F-1] "SCAN" when the menu 1 screen is displayed.

2) Push [F-5] "SET 1" or "SET 3" until it becomes "SET 2."
   - The memory scan condition screen as shown in the diagram at left is selected.

3) Push and hold [F-4] "SEL-N" then rotate the main dial to select the selected number.

4) Push [F-6] "MENU" to return to the menu 1 screen.

1) Set the memory scan bank. See p. 51 Section 9.5 (1) SETTING THE MEMORY SCAN RANGE steps 1 ~ 4.
   - Memory scan edges do not function in selected mode memory scan.

2) Select the desired resume condition. See p. 46 Section 9.1 (3) SCAN RESUME CONDITION.

3) Adjust the [SQJE] control to the threshold point.

4) Push a digit key to select the desired scan number to be scanned.

5) Push the [SEL] switch to start selected number memory scan.
   - At least 2 memory channels with the same selected number must be programmed to operate scanning.

6) Adjust the [SPEED] control to the desired scanning speed.

7) To stop scanning, push a [SCAN] switch ([PRIRO], [PROG], etc.) or a CRT function switch ([F-1] ~ [F-6]).
   - The main dial also stops scanning.
9-8 AUTO MEMORY WRITE SCAN

Auto memory write scan operates in the same way as programmed scan. However, when a signal is received, the received frequency and time are automatically written in a memory channel in the 900 ~ 999 range.

The starting channel for memory writing is selectable; scanning clears all memory channels in the 900 ~ 999 range then writing starts from memory channel 900, or scanning keeps programmed memory channel then starts writing from the lowest blank memory channel.

Once a frequency is written into a memory channel, the frequency is not rewritten during scan operation.

| CAUTION: | When pushing and holding the [AUTO] switch to start scanning, the programmed contents in the 900 ~ 999 memory channel range are erased. |

1) Set the programmed scan edge. See p. 47 Section 9 - 2 (1) SETTING PROGRAMMED SCAN EDGES.

2) Select the desired resume condition. See p. 46 Section 9 - 1 (3) SCAN RESUME CONDITION.

3) Adjust the [SQUELCH] control to the threshold point.

4) Enter the desired scan group number using a digit key.
   - If you do not enter a scan group number, the previous scan group is used.

5) Push the [AUTO] switch to start auto memory write scan.
   - The lowest blank memory channel in the 900 ~ 999 range appears.
   - When memory channels are programmed randomly with blank channels, the receiver automatically moves the programmed channels to lower memory channel numbers.
   - Scan does not activate when the programmed scan edges are not programmed.

6) To erase all memory channels in the 900 ~ 999 range then start auto memory write scan, push and hold the [AUTO] switch.

7) Adjust the [SPEED] control to the desired scanning speed.

8) To stop scanning, push a [SCAN] switch ([PRI0], [PROG], etc.) or a CRT function switch ([F-1] ~ [F-6]).
   - The main dial also stops scanning.

| NOTE: | Scanning stops if auto memory write scan writes frequencies up to memory channel 999. |
10-1 CLOCK ADJUSTMENT

(1) MAIN CLOCK

The IC-R9000 has 2 clocks: the main and sub clocks. The main clock displays the year, month, day, hour, minute and second. The sub clock displays the hour, minute and a note of up to 6 characters.

1) Access the clock & timer screen:
   - Push [F-4] “TIME” when the menu 1 screen is displayed.

2) Push [F-3] “ADJ” to access the clock adjustment (1) screen as shown in the diagram at left.

3) To set the year, push and hold [F-1] “DATE” and [F-2] “DAY” then rotate the main dial.

4) To set the month and date, push and hold [F-1] “DATE” then rotate the main dial.

5) To set the day, push and hold [F-2] “DAY” then rotate the main dial.

6) To set the time, push and hold [F-3] “CLK 1” then rotate the main dial.

7) To set the second at 0, push [F-3] “CLK 1.”

(2) SUB CLOCK

1) Access the clock adjustment (1) screen:
   - See (1) MAIN CLOCK steps 1 and 2 above.

2) To set the time of the sub clock, push and hold [F-4] “CLK 2” then rotate the main dial.

3) To write a note in the clock 2 area, push [F-5] “NOTE.”
   • The clock adjustment (2) screen appears.
   • If you do not need to write, skip to step 9.

4) Choose a character using the main dial.

5) Push [F-1] “ENT” to write the character.

6) Repeat steps 4 and 5 to write your desired note.
   • When wrong characters are written, pushing [F-5] “CE” clears all input then returns the screen to the clock adjustment (1) screen.

7) Use “—->,” “<——” and “SPACE” to move the cursor.

8) To store the note, push [F-6] “SET.”
   • The note is written and the screen returns to the clock adjustment (1) screen.

9) Push [F-6] “MENU” to return to the menu 1 screen.
10-2 SLEEP TIMER

(1) SLEEP 1 TIMER

The selectable sleep timers, sleep 1 (Time-off Timer) and sleep 2 (Clock Timer), turn OFF the receiver.

When the [TIMER] switch is OFF the sleep timer functions as an alarm timer which emits beeps for 2 sec. as an alarm at the programmed off time.

1) Access the clock & timer screen:
   - Push [F-4] “TIME” when the menu 1 screen is displayed.

2) Push [F-1] “SLEEP” to access the sleep timer screen.

3) To adjust the sleep 1 time from 0 ~ 90 minutes, push [F-1] “—10” (or “SLP 1”).

4) Set the [TIMER] switch on the front panel.
   • IN : sleep timer activates.
   • OUT : alarm timer activates.

5) Push [F-6] “MENU” to return to the menu 1 screen.

6) To turn the sleep timer OFF, push [F-2] “OFF” when the CRT shows the sleep timer screen.

(2) SLEEP 2 TIMER

1) Access the sleep timer screen:
   - See (1) SLEEP 1 TIMER steps 1 and 2 above.

2) To adjust the off time, push and hold [F-3] “SLP 2” then rotate the main dial.

3) Set the [TIMER] switch on the front panel.
   • IN : sleep timer activates.
   • OUT : alarm timer activates.

4) Push [F-6] “MENU” to return to the menu 1 screen.

5) To turn the sleep timer OFF, push [F-2] “OFF” when the CRT shows the sleep timer screen.

**NOTE:** When the daily timer has been turned ON, the SLP 2 area shows the daily timer off time. See Section 10-3 for daily timer information.
10-3 DAILY TIMER

(1) PROGRAMMING A DAILY TIMER

DAILY TIMER (2) SCREEN

Set the memory channel which will appear when the timer is ON.
Set the OFF time.
Set the ON time.
Set the day in a week.

DAILY TIMER (1) SCREEN

5 programmed daily timers turn the receiver ON and OFF. The programmable contents include the day, ON/OFF time and memory channel you want receive in.

1) Access the clock & timer screen:
   - Push [F-4] “TIME” when the menu 1 screen is displayed.

2) Push [F-2] “TIMER” to select the daily timer set (1) screen.

3) Push and hold [F-1] “CH” then rotate the main dial to select one of 5 timers.

4) Push [F-3] “SET” to set the timer contents on the selected timer.
   - The daily timer (2) screen appears.

5) Push and hold one of [F-1] ~ [F-4] then rotate the main dial to set your desired timer contents as shown in the diagram at left.

6) To program blank status, push and hold [F-5] “BLANK” and push the desired key: “DAY,” “OFF” or “Mch.”
   - When “DAY” is blank, the timer activates every day.
   - When “OFF” is blank, the timer functions as power ON only.
   - When “Mch” is blank, the displayed frequency appears at the timer ON.

7) Push [F-6] “SET” to return to the daily timer set (1) screen.

8) Program another daily timer (begin again from step 3) or push [F-6] “MENU” to return to the menu 1 screen.

(2) OPERATING THE DAILY TIMERS

1) Access the daily timer set (1) screen:
   - See (1) PROGRAMMING A DAILY TIMER step 1 and 2 above.

2) Push and hold [F-1] “CH” then rotate the main dial to select the desired timer.

   - The activated timer lights at a bright intensity.
   - Priority number appears in “SEL” area depending on programmed time.

4) Repeat steps 2 and 3 when activating another timer simultaneously.

5) Push IN the [TIMER] switch on the front panel.

6) Push [F-6] “MENU” to start the daily timer function.
   - After several seconds, power automatically turns OFF and will turn ON again at the programmed ON time.
   - When the sleep timer is programmed, power will turn OFF after sleep time finishes.

NOTE: To operate the daily timer together with the sleep timer, set the sleep timer before pushing IN the [TIMER] switch.
(3) FUNCTION OPERATION

- CHECKING THE OFF TIME
  The OFF time of the daily timer can be checked on the clock & timer screen. Push [F-4] "TIME" when the menu 1 screen is displayed.

- CHANGING THE OFF TIME
  The OFF time can be changed when the timer is ON without changing the programming on the daily timer (2) screen, if required.
  - Select the sleep timer screen and set the desired OFF time on the SLP 2 (Clock Timer).
  - The programmed OFF time remains at the original time.

- DAILY TIMER CANCELING
  If you wish to cancel the daily timer which has been turned ON and to operate the next programmed timer, turn the [POWER] switch OFF and then ON.
  - The receiver is turned OFF as soon as the power comes ON.

- SLEEP TIMER CANCELING
  If you wish to cancel the sleep timer when operating the sleep timer together with the daily timer, turn the [POWER] switch OFF and then ON.
  - The receiver is turned OFF as soon as the power comes ON.

</table>

### 11-2 CLEANING

If the receiver becomes dusty or dirty, wipe it clean with a dry, soft cloth.

**AVOID** the use of strong chemical agents such as benzine or alcohol, as they may damage the receiver’s surfaces.
11-3 BACKUP BATTERIES

■ CLOCK BATTERY

The IC-R9000 has two lithium batteries: one for clock and one for memory backup.

The usual life of the clock battery is approx. 2 years after shipment from the factory. If the clocks are slow or there is a numbering malfunction, replace the battery with a new one.

1) Disconnect the AC power cable.

2) Open the hatch cover on the top cover.

3) Pull up the battery latch, then remove the battery.

4) Insert a new battery (CR2032) with the proper polarity.
   - Be sure the symbol side of the battery is up.

   **CAUTION:** BE CAREFUL! Battery installation with reverse polarity will damage the internal circuit.

5) Close the hatch cover, then adjust the clock time.

■ MEMORY BACKUP BATTERY

The usual life of the memory backup battery is approx. 5 years. When the battery is exhausted, the receiver operates normally but the receiver cannot retain memory information.

   **CAUTION:** Memory backup battery replacement must be done by an authorized Icom Dealer or Service Center.

11-4 COVER REMOVAL

   **WARNING:** DISCONNECT the AC power cable from the receiver before performing any work on the receiver.

1) Turn OFF the [POWER] switch.

2) Disconnect the AC power cable.

3) Remove the mounting handles and rear stands, if they are attached.

4) Unscrew the 10 screws from the top cover and 8 screws from the bottom cover as shown in the diagram at left.

5) Remove the top cover slowly and unplug the speaker connector.

6) Remove the bottom cover.
11-5 FUSE REPLACEMENT

The IC-R9000 has 3 fuses for receiver protection:
- AC power input (2 A)
- Regulator circuit (4 A)
- 13.8 V output jack (0.5 A)

If the fuse blows or the receiver stops functioning, find the source of the problem, if possible, and replace the damaged fuse with a new, rated fuse.

**WARNING:** DISCONNECT the AC power cable from the receiver before performing any work on the receiver.

The AC power input fuse is held in the [FUSE] holder. Unscrew the [FUSE] holder using a phillips head screwdriver, then replace the damaged fuse with a new, rated one.

**REPLACEMENT FUSE:** FGB 2 A
(FGMS 2 A for German version.)

The regulator circuit fuse is located under the RF-A unit.

1) Disconnect the AC power cable, then remove the top and bottom covers.
   - See Section 11 - 4 COVER REMOVAL.

2) Unscrew 1 screw holding the RF-A unit on each side (a total of 2 screws).

3) Lift up the RF-A unit to the front side as shown in the diagram at left.
   - The REG unit is located under the RF-A unit.

4) Replace the damaged regulator circuit fuse with a new, rated one.

**REPLACEMENT FUSE:** FGB 4 A

When an external connection via the [DC OUTPUT JACK] or the [ACC] socket has a problem, the fuse may blow. If the fuse blow, the receiver operates normally. However, the above jacks do not output 13.8 V DC.

1) Disconnect the AC power cable, then remove the top and bottom covers.
   - See Section 11 - 4 COVER REMOVAL.

2) Set the receiver upside down.

3) Replace the damaged fuse with a new, rated one.
   - The 13.8 V output fuse is located near the [LINE MIX] switch on the rear panel.
   - Refer to p. 66 for detailed location.

**REPLACEMENT FUSE:** FGB 0.5 A
11 MAINTENANCE

11-6 CPU RESETTING

(1) LOGIC CHECK SCREEN

The CRT display may occasionally display erroneous information (e.g., when first applying power). This may be caused externally by static electricity or other factors.

If this problem should occur, turn OFF power. Wait a few seconds and turn ON again. If the problem continues, check the internal CPU and RAM IC chips using the logic check screen.

The logic check screen tests a main CPU, sub CPU and RAM IC chips for correct functioning.

1) Turn OFF the [POWER] switch.

2) Push and hold the [SPEECH] switch then turn the [POWER] switch ON. Then release the [SPEECH] switch.
   - The logic check screen appears approx. 10 sec. after power is ON.

3) When the screen shows "Passed" to all check point, push [F-6] "MENU."
   - The menu 1 screen is displayed.

4) If another comment is displayed on the screen, push [F-1] "RESET."

**CAUTION:** When pushing [F-1] "RESET," all memory information is erased.

The receiver checks the following items on the logic check screen:

<table>
<thead>
<tr>
<th>INDICATOR</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAM MAIN</td>
<td>8 k bytes RAM for MAIN CPU.</td>
</tr>
<tr>
<td>V-RAM</td>
<td>128 k bytes V-RAM for CRTC.</td>
</tr>
<tr>
<td>SUB CONTROL</td>
<td>Control line between MAIN CPU and SUB CPU.</td>
</tr>
<tr>
<td>SUB DATA</td>
<td>Data transferring between MAIN CPU and SUB CPU.</td>
</tr>
<tr>
<td>SUB INTERRUPT</td>
<td>Interrupt data line to SUB CPU.</td>
</tr>
<tr>
<td>Mch No.</td>
<td>Indicating memory channel number.</td>
</tr>
<tr>
<td>DATA</td>
<td>The decimal and width of all memory channels.</td>
</tr>
</tbody>
</table>

The internal CPU can be reset without displaying the logic check screen. Use direct CPU resetting when you wish to erase all memory channels.

1) Turn [POWER] OFF.

2) Push and hold the [CLEAR] switch then turn [POWER] ON.

3) The CPU is now reset and the menu 1 screen is displayed.
12-1 FREQUENCY CALIBRATION

A very accurate frequency counter is necessary to calibrate the frequency of the IC-R9000. However, a simple calibration may be performed by receiving radio station WWV, or other standard frequency signals.

The calibration adjusts the reference oscillator. Each band calibration is therefore unnecessary.

1) Set USB mode.

2) Set the operating frequency to the standard frequency station minus 1 kHz.
   • Use a standard frequency below 30 MHz.

   EXAMPLE:
   When using WWV (10.00000 MHz), adjust the operating frequency to 9.99900 MHz.
   10.00000 MHz − 0.00100 MHz (1 kHz) = 9.99900 MHz

3) Turn ON the [CALIBRATOR] switch.

4) Adjust the [CALIBRATOR] pot for a zero beat.
   • Zero beat means that two signals are exactly the same frequency, resulting in a single audio tone being emitted.

   When you can receive a very accurate station above 1 GHz, calibration can also be performed using the spectrum scope screen. Use FM or AM mode when using the spectrum scope screen.

The tension of the main dial may be adjusted to suit your operating needs.

1) Use a philips head screw driver.

2) The brake adjustment screw is located on the bottom of the receiver cabinet below the main dial.

3) Turn the brake adjustment screw to a comfortable tension level while turning the main dial continuously and evenly in one direction.

12-2 MAIN DIAL BRAKE ADJUSTMENT

The diagram shows the receiver is set upside down.
12-3 OPTIONAL VOICE SYNTHESIZER UNIT

■ UNIT INSTALLATION

An optional UT-36 VOICE SYNTHESIZER UNIT announces the operating frequency when the [SPEECH] switch is pushed or when scanning stops.

1) Disconnect the AC power cable.
2) Open the hatch cover on the top cover.
3) Connect 2 connectors (3 pins and 5 pins) inside the IC-R9000 to the UT-36.
4) Remove the protective paper attached to the bottom of the UT-36 to expose the adhesive strip.
5) Attach the UT-36 properly as shown in the diagram at left.
6) Set the language, speech speed and speech level as shown in the diagram at left.
7) Close the hatch cover.

■ VOICE SYNTHESIZER OPERATION

The UT-36 announces a synthesized voice through the speaker or jacks depending on the switch positions. Set the switches to the desired positions.

  10 dB S/N for SSB, CW, FSK and AM.
  12 dB SINAD for FM and Wide-FM

  Maximum sensitivity values are indicated in the chart above.

- Audio output power: More than 2.5 W at 10% distortion with an 8 Ω load
- Audio impedance: 4 ~ 8 Ω
- Power supply requirement: 100 ~ 120 V AC (U.S.A. version)
  220 ~ 240 V AC (Australia, Europe and France versions)
  220 V (German version)
- Antenna impedance: 50 Ω (unbalanced)
- Power consumption: Less than 1.10 VA
- Usable temperature range: −10°C ~ +50°C (+14°F ~ +122°F)
- Frequency stability: 0.1 ~ 30 MHz ± 25 Hz
  30 ~ 1999.8 MHz ± 0.25 ppm
  (0°C ~ +50°C; +32°F ~ +122°F)
- Dimensions: 424(W) x 150(H) x 365(D) mm
- Weight: 20.0 kg (44.1 lb)

All stated specifications are subject to change without notice or obligation.
**SP-20 EXTERNAL SPEAKER WITH AUDIO FILTERS**
An external speaker with audio filters. Received audio quality can be changed with the filters. Size and style match the IC-R9000.

**HP-2 COMMUNICATION HEADPHONES**
Provides clean audio and privacy in noisy environments.

**UT-36 VOICE SYNTHESIZER UNIT**
Announces the displayed frequency in English or Japanese. Speech speed can be changed in 2 steps.

**CT-16 SATELLITE INTERFACE UNIT**
Easy tuning for instant satellite communications.

**CT-17 CI-V LEVEL CONVERTER**
For remote receive control using a personal computer equipped with an RS-232C I/O port. You can change operating frequencies, memory channels, etc., with your computer keyboard.

**AH-7000 SUPER WIDEBAND OMNIDIRECTIONAL ANTENNA**
Frequency coverage:
25 ~ 1300 MHz (Receive)
50, 144, 430, 900, 1200 MHz bands (Transmit).
Count on us!
