FOREWORD

Thank you for purchasing this fine Icom product. The ID-E880 VHF/UHF DIGITAL TRANSCEIVER is designed with Icom’s superior technology and craftsmanship combining traditional analog technologies with the new digital technology, Digital Smart Technologies for Amateur Radio (D-STAR), for a balanced package.

With proper care, this product should provide you with years of trouble-free operation. We want to take a couple of moments of your time to thank you for making your ID-E880 your radio of choice, and hope you agree with Icom’s philosophy of “technology first.” Many hours of research and development went into the design of your ID-E880.

FEATURES

- DV mode (digital voice + low-speed data communication) operation-ready
  - Text message and call sign exchange
  - Transmitting position data with a third-party GPS receiver
- DR (D-STAR Repeater) mode and repeater list allow you to operate a D-STAR repeater simply
- Switchable VHF and UHF transceiver
- 50 W—high transmit output power
- Detachable controller for flexible installation
- Large tuning dial and band switch button

IMPORTANT

READ ALL INSTRUCTIONS carefully and completely before using the transceiver.

SAVE THIS INSTRUCTION MANUAL— This instruction manual contains important operating instructions for the ID-E880.
PRECAUTIONS

⚠️ **WARNING RF EXPOSURE!** This device emits Radio Frequency (RF) energy. Extreme caution should be observed when operating this device. If you have any questions regarding RF exposure and safety standards please refer to the Federal Communications Commission Office of Engineering and Technology’s report on Evaluating Compliance with FCC Guidelines for Human Radio frequency Electromagnetic Fields (OET Bulletin 65).

⚠️ **WARNING! NEVER** connect the transceiver to an AC outlet. This may pose a fire hazard or result in an electric shock.

⚠️ **WARNING! NEVER** operate the transceiver while driving a vehicle. Safe driving requires your full attention—anything less may result in an accident.

⚠️ **WARNING! NEVER** cut the DC power cable between the DC plug and fuse holder. If an incorrect connection is made after cutting, the transceiver may be damaged.

**NEVER** connect the transceiver to a power source of more than 16 V DC. This will damage the transceiver.

**NEVER** connect the transceiver to a power source using reverse polarity. This will damage the transceiver.

**NEVER** expose the transceiver to rain, snow or any liquids. The transceiver may be damaged.

**NEVER** operate or touch the transceiver with wet hands. This may result in an electric shock or damage the transceiver.

**NEVER** place the transceiver where normal operation of the vehicle may be hindered or where it could cause bodily injury.

**NEVER** let objects impede the operation of the cooling fan on the rear panel.

**DO NOT** push the PTT unless you actually intend to transmit.

**DO NOT** allow children to play with any radio equipment containing a transmitter.

During mobile operation, **DO NOT** operate the transceiver without running the vehicle’s engine. When the transceiver’s power is ON and your vehicle’s engine is OFF, the vehicle’s battery will soon become exhausted.

**DO NOT** use or place the transceiver in direct sunlight or in areas with temperatures below –10°C or above +60°C.

**BE CAREFUL!** The transceiver will become hot when operating it continuously for long periods.

**DO NOT** set the transceiver in a place without adequate ventilation. Heat dissipation may be affected, and the transceiver may be damaged.

**DO NOT** use harsh solvents such as benzene or alcohol to clean the radio, because they can damage the transceiver’s surfaces.

**USE** Icom microphones only (supplied or optional). Other manufacturers’ microphones have different pin assignments and may damage the transceiver if attached.
SUPPLIED ACCESSORIES

The following accessories are supplied with the transceiver.

1. DC power cable (3 m†) .................................................... 1
2. Separation cable (3.4 m†) ............................................. 1
3. Microphone (HM-133) ..................................................... 1
4. Fuse (20 A) ................................................................... 1
5. Microphone hanger....................................................... 1
6. Mounting screws, nuts and washers ......................... 1 set
7. Mobile mounting bracket ............................................... 1
8. Remote controller bracket ............................................. 1

■ Installation

◊ Precaution — magnets

⚠️ **CAUTION**
Magnets are used for the controller’s attachment to a metal object.

**NEVER** attach the controller on the main unit’s top cover, particularly around the internal speaker grill. It may cause the contents of the CPU and memory device to be deleted.

**NEVER** put the controller near a clock, television set (CRT type), magnetic compass or any magnetic/IC cards, credit cards, etc. The magnets may cause the products to malfunction or may erase the contents of magnetic storage devices.

Please note that the controller may detach and fall with impact or vibration.

◊ Installation methods

• *Single body installation*

- The supplied mounting bracket can be used for the main unit installation.
• Remote installation

- The supplied remote controller bracket and separation cable can be used for installation.
- Optional OPC-440 MICROPHONE CABLE (5.0 m) and OPC-647 (2.5 m) are available to extend the microphone cable.
- Optional OPC-441 SPEAKER CABLE (5.0 m) is available to extend the speaker cable.

◆ Location

Select a location which can support the weight of the transceiver and does not interfere with driving. We recommend the locations shown in the diagram below.

NEVER place the transceiver or remote controller where normal operation of the vehicle may be hindered or where it could cause bodily injury.

NEVER place the transceiver or remote controller where air bag deployment may be obstructed.

DO NOT place the transceiver or remote controller where hot or cold air blows directly onto it.

DO NOT place the transceiver or remote controller in direct sunlight.
**Quick Reference Guide**

**Using the mounting bracket**

1. Drill 4 holes where the mounting bracket is to be installed.
   - Approx. 5.5–6 mm when using nuts; approx. 2–3 mm when using self-tapping screws.
2. Insert the supplied screws, nuts and washers through the mounting bracket and tighten.
3. Adjust the angle for your suitable position.

**Microphone connection**

A microphone connector is available on the main unit front panel. Connect the supplied microphone connector as illustrated below.

**IMPORTANT!**

Detailed installation notes for Icom mobile transceivers to be fitted into vehicles are available. Contact your Icom dealer or distributor.
Controller’s attachment/detachment
You can attach or detach the controller to/from the main unit as below.

• Attach the controller
  ➡ Slide the controller in the direction of the arrow until the controller is locked and makes a ‘click’ sound.

• Detach the controller

![Diagram of controller attachment/detachment]

Separation cable connection
Using the supplied separation cable (3.4 m), the controller can be separated from the main unit, doubling as a remote controller.

Connect the controller and the main unit using with the supplied separation cable as follows.

![Diagram of separation cable connection]

CAUTION:
NEVER short the terminals of the single mount connectors for main unit or controller during separate operation. This will cause a transceiver malfunction or damage the transceiver.
Remote installation
The supplied remote controller bracket is used for remote installation.

These screws are not supplied.

Attach the remote controller bracket onto a flat surface using 4 self-tapping screws (2.6 mm(d)), or double-sticky tape, etc., as at left, then attach remote controller to the bracket.

When installing into your vehicle

1. Remove two screws and magnets from the remote controller.

   Magnet
   FH: Flat head
   FH M2.6 × 6 mm

   Remote controller
   FH M2.6 × 8 mm

   CAUTION: NEVER use any other than the supplied screws (FH M2.6 × 6 mm) if re-attaching the magnets to the remote controller. Otherwise the transceiver's internal board may be damaged.

2. Attach the removed magnets to the remote controller bracket.

   Remote controller bracket
   Magnet

   Remote controller bracket (with magnets)
   FH: Flat head
   FH M2.6 × 8 mm

   Remote controller

   Adjust the viewing angle for maximum visibility of the function display.

3. Attach the supplied remote controller bracket as below.

4. Attach the remote controller on to the optional MB-120 as below.
**Battery connection**

- **WARNING NEVER** remove the fuse holders from the DC power cable.
- **NEVER** connect the transceiver directly to a 24 V battery.
- **DO NOT** use the cigarette lighter socket for power connections. (See p. 1 for details)

Use a rubber grommet when passing the DC power cable through a metal plate to prevent a short circuit.

**CONNECTING TO A DC POWER SOURCE**

- **12 V battery**
- **Supplied DC power cable**
- **ID-E880**
- **Fuses 20 A**

**NOTE:** Use terminals for the cable connections.

**DC power supply connection**

Use a 13.8 V DC power supply with at least 15 A capacity.

Make sure the ground terminal of the DC power supply is grounded.

**CONNECTING TO A DC POWER SUPPLY**

See p. 163 for fuse replacement.
**Antenna installation**

- **Antenna location**
  To obtain maximum performance from the transceiver, select a high-quality antenna and mount it in a good location. It is not necessary to use radials on a magnetic mount (“mag mount”) antenna.

- **Antenna connector**
  The antenna uses a PL-259 connector.

- **PL-259 CONNECTOR**

  1. Slide the coupling ring down. Strip the cable jacket and tin.
  2. Strip the cable as shown at left. Soft solder the center conductor.
  3. Slide the connector body on and solder it.
  4. Screw the coupling ring onto the connector body.

**NOTE:** There are many publications covering proper antennas and their installation. Check with your local dealer for more information and recommendations.
Your first contact

Now that you have your ID-E880 installed in your car or shack, you are probably anxious to get on the air. We would like to take you through a few basic operation steps to make your first time “On The Air” an enjoyable experience.

1. Turning ON the transceiver

Before powering up your ID-E880, you may want to make sure the audio volume and squelch level controls are set in 9–10 o’clock positions.

Although you have purchased a brand new transceiver, some settings may be changed from the factory defaults because of the Quality Control (QC) process. Resetting the CPU is necessary to start from factory default.

While pushing and holding [S.MW] and [VFO/MHz] keys, push and hold [VOL] for 1 sec. to reset the CPU.

2. Selecting the operating frequency band

The ID-E880 can use the 2 m or 70 cm amateur bands.

Frequency band initial is displayed.

Push [BAND] then rotate [DIAL] to select the desired frequency band.
• Push [BAND] again to return to the frequency indication.

Using the HM-133

You can select the desired frequency band from the HM-133.

• 144 MHz band

Push [BAND]

• 400 MHz band

Push [BAND]
3. Tune the frequency
The tuning dial will allow you to dial in the frequency you want to use. Page 15 will instruct you on how to set the tuning speed.

Rotate [DIAL] to tune the frequency.

Using the HM-133
You can directly enter the frequency with the HM-133 keypad.

[EXAMPLE]: Setting frequency to 145.3625 MHz.
Repeater operation

1. Setting duplex
- Push [BAND] then rotate [DIAL] to select the frequency band.
- Push [BAND] again, then rotate [DIAL] to select the repeater frequency.
- Push and hold [DUP](LOW) for 1 sec. then rotate [DIAL] to select minus duplex or plus duplex.
Push [DUP](LOW) again.

2. Repeater tone
Push and hold [TONE](M/CALL) for 1 sec. then rotate [DIAL] to select “TONE,” if the repeater requires a subaudible tone to be accessed. Push [TONE](M/CALL) again.

Using the HM-133
Plus or minus duplex selection and the repeater tone setting can be done easily via the HM-133.
Push [DUP– 7(TONE)] for minus duplex; [DUP+ 8(TSQL(●))] for plus duplex selection, push [FUNC] then [DUP– 7(TONE)] to turn the repeater tone ON.
Programming memory channels

The ID-E880 has a total of 1052 memory channels (including 25 pairs scan edges and 2 call channels) for storing often-used operating frequency, repeater settings, etc.

1. Setting a frequency
In the VFO mode, set the desired operating frequency with repeater, tone and tuning steps, etc.
   ➞ Push [VFO/MHz] to select the VFO.
   ➞ Rotate [DIAL] to set the desired frequency.
   • Set other data, such as repeater tone, duplex information, tuning step), if desired.

2. Selecting a memory channel
Push [S.MW], then rotate [DIAL] to select the desired memory channel.
   • “MA” indicator and memory channel number blink.

3. Writing a memory channel
Push and hold [MW](S.MW) for 1 sec. to program.
   • 3 beeps sound.
   • Return to the VFO mode automatically after programming.
   • Memory channel number automatically increases when continuing to push [MW](S.MW) after programming.

Using the HM-133

1. Push [MR/CALL] to select the memory mode.
2. Push [ENT C(T-OFF)] first, then enter the desired memory channel via the keypad.
3. Push [VFO/LOCK] to select the VFO mode, then set the desired operating frequency, including offset direction, tone settings, etc.
   ➞ Push [VFO/LOCK] to select the VFO.
   ➞ Push [ENT C(T-OFF)] first, then enter the desired operating frequency via the keypad.
   • Set other data, such as repeater tone, duplex information, tuning step, if necessary.
4. Push [FUNC] then push and hold [CLR A(MW)] for 1 sec. to program.
   • 3 beeps sound.
   • Memory channel number automatically increases when continuing to push [CLR A(MW)] after programming.
PANEL DESCRIPTION

Main unit

1 ANTENNA CONNECTOR [ANT] (p. VII)
Connects a 50 Ω antenna with a PL-259 connector and a 50 Ω coaxial cable for transmission and reception.

2 COOLING FAN
Rotates while transmitting.
Also rotates while receiving depending on the setting in FUNC set mode (SET). (p. 128)

3 DATA JACK [DATA]
⇒ Connect a PC through the optional data communication cable OPC-1529R, for low-speed data communication in the DV mode or data cloning with the cloning software CS-80/880 (free download). (pgs. 70, 156)
⇒ Connect a GPS receiver through the optional data communication cable OPC-1529R, for GPS operation. (p. 73)

4 PACKET JACK [PACKET] (pgs. 157, 158)
Connects a TNC (Terminal Node Controller), etc. for data communications. The transceiver can support 1200/9600 bps packet communication (AFSK/GMSK).

5 EXTERNAL SPEAKER JACK [SP]
⇒ Connect an 8 Ω speaker.
• Audio output power is more than 2.0 W.
⇒ Connect an optional cloning cable OPC-478/478UC or OPC-474 for data cloning. (pgs. 155, 156)

6 POWER RECEPTACLE [DC13.8V]
Accepts 13.8 V DC ±15% with the supplied DC power cable.

NOTE: DO NOT use a cigarette lighter socket as a power source when operating in a vehicle. The plug may cause voltage drops and ignition noise may be superimposed onto transmit or receive audio.

ANTENNA INFORMATION
For radio communications, the antenna is of critical importance, to maximize your output power and receiver sensitivity. The transceiver accepts a 50 Ω antenna and a Voltage Standing Wave Ratio (VSWR) of 1.5:1 or less. High SWR values not only may damage the transceiver but also lead to TVI or BCI problems.
1 PANEL DESCRIPTION

## Front panel

1 PANEL DESCRIPTION

### 1. MENU•LOCK KEY [MENU
- Push to enter the MENU screen indication ON or OFF. (p. 116)
- Push and hold for 1 sec. to toggle the lock function ON or OFF. (p. 16)

### 2. SELECT MEMORY WRITE•MEMORY WRITE KEY [S.MW•MW] (pgs. 90, 92, 94, 96–99, 103)
- Push to enter the select memory write mode for memory channel programming.
- Push [MENU] to cancel and exit the select memory write mode.
- Push and hold to store the frequency, operating mode, etc. into the selected memory channel.

### 3. TUNING DIAL [DIAL]
Selects the operating frequency (p. 14), memory channel (pgs. 12, 88), the setting of the set mode item (p. 116) and the scanning direction (pgs. 102, 105, 106).

### 4. BAND•MODE KEY [BAND•MODE]
- Push to enter band selection state. (p. 11)
  - Rotating [DIAL] selects the band.
- Push and hold for 1 sec. to enter operating mode selection state. (p. 18)
  - Rotating [DIAL] selects the operating mode.

### 5. VFO/MHz TUNING•SCAN KEY [VFO/MHz•SCAN]
- Push to select the VFO mode. (p. 12)
- During VFO mode operation, push to select 1 MHz and 10 MHz tuning steps. (p. 14)
- Push and hold for 1 sec. to enter the scan type selection state. (pgs. 102, 105, 106, 150)
  - Cancels a scan when pushed during scan.

### 6. MEMORY/CALL•TONE KEY [M/CALL•TONE]
- Push to select memory and call channel modes. (pgs. 12, 13, 88, 89)
During FM/FM-N mode operation, push and hold for 1 sec. to enter the tone function selection state. (pgs. 23, 146)
- Rotating [DIAL] selects the tone function.
- T (Repeater tone), TSQ (↑↑), TSQL, DTCS (↑↑), DTCS, tone squelch reverse, DTCS squelch reverse or tone function OFF can be selected.

During DV mode operation, push and hold for 1 sec. to select the digital call sign squelch, digital code squelch and no digital squelch operation in sequence. (p. 151)
- Rotating [DIAL] selects the digital squelch function.
- DSQL (↑↑), DSQL, CSQL (↑↑), CSQ or digital call squelch OFF can be selected.

Push to select the DR mode. (pgs. 13, 50, 52)
- Rotating [DIAL] selects access repeater.
- The DV mode is automatically selected when other mode is selected.

During DV mode operation, push and hold for 1 sec. to enter UR call sign selection state. (pgs. 50, 52, 56–61)
- Rotating [DIAL] selects UR call sign.
- The DV mode is automatically selected when other mode is selected.

Push to display the current call sign. (p. 43)
- Rotating [DIAL] selects UR, R1 (access repeater), R2 (linked repeater) and MY (your own) call signs.
- Push and hold for 1 sec. to set the received call signs (caller and RXRPT1/2) to the current call sign. (p. 45)
- Only received caller call sign is displayed in DR mode. (p. 55)

Each push changes the output power selection. (p. 18)
- LOW, MID and HIGH (no indicator visible) are available.
- Push and hold for 1 sec. to enter the duplex operation selection state. (p. 23)
- Rotating [DIAL] selects the duplex direction.
- DUP– (minus duplex), DUP (plus duplex) and simplex (no indicator visible) are available.

Push to turn the monitor function ON or OFF. (p. 20)
- Push and hold for 1 sec. to enter DTMF set screen. (p. 142)

Varies the squelch level. (p. VIII)
- The RF attenuator activates and increases the attenuation when rotated clockwise at beyond the center position. (p. 19)

Push and hold for 1 sec. to turn power ON or OFF.

Connects the supplied or an optional microphone.

Adjusts the audio level.
1 PANEL DESCRIPTION

Function display

1 TRANSMIT INDICATOR
⇒ Appears while transmitting. (p. 17)

2 CALL SIGN TYPE INDICATORS
“MY” appears when MY call sign is selected; “UR” appears when UR station call sign is selected; “R1” appears when access repeater call sign (RPT1) is selected; “R2” appears when linked repeater call sign (RPT2) is selected.

3 FREQUENCY READOUT
Shows the operating frequency, set mode contents, etc.
• Frequency decimal point blinks while scanning. (pgs. 102, 105, 106)

4 OUTPUT POWER INDICATORS (p. 18)
“LOW” appears when low output power; “MID” appears when middle output power, no indication appears when high output power is selected.

5 OPERATING MODE INDICATOR (p. 18)
Shows the selected operating mode.
• FM, FMN (FM narrow), AM, NAM (AM narrow) and DV (Digital voice) are available.
• “DVG” or “DV A” appears when GPS transmission or GPS-A transmission is selected in the DV mode. (p. 138)

6 BUSY INDICATOR
⇒ Appears when a signal is being received or the squelch is open. (p. 17)
⇒ Blinks while the monitor function is activated. (p. 20)

7 S/RF INDICATORS (p. 17)
⇒ Shows the relative signal strength while receiving signals.
⇒ Shows the output power level while transmitting. (p. 18)
MEMORY CHANNEL NUMBER INDICATORS
- Shows the selected memory channel number. (pgs. 12, 88)
- Shows the selected bank initial. (p. 93)
- “C0” or “C1” appears when the call channel is selected. (pgs. 13, 89)

DR (D-STAR REPEATER) INDICATOR (pgs. 13, 50, 52)
Appears when the DR mode is selected.

AUTO POWER OFF INDICATOR (p. 129)
Appears when the auto power OFF function is in use.

GPS INDICATOR
Appears when a GPS receiver is connected and a valid position data is received; blinks when an invalid data is received.
- GPS indicator can be turned OFF in GPS.SET mode. (p. 138).

MEMORY INDICATOR (pgs. 12, 88)
Appears when the memory mode is selected.

PRIORITY INDICATOR (pgs. 112, 113, 115)
Appears while priority watch is activated, blinks while priority watch is paused.

SKIP INDICATOR (p. 108)
- “SKIP” appears when the displayed memory channel is specified as a skip channel.
- “P SKIP” appears when the displayed frequency is specified as a program skip frequency.

TONE INDICATOR
• During FM/FM-N mode operation:
  - “T” appears while the repeater tone is in use. (p. 23)
  - “T SQL” appears while the tone squelch function is in use. (p. 146)
  - “T SQL-R” appears while the reverse tone squelch function is in use. (p. 147)
  - “DTCS” appears while the DTCS squelch function is in use. (p. 146)
  - “DTCS -R” appears while the reverse DTCS squelch function is in use. (p. 147)
  - “(••)” appears with the “T SQL” or “DTCS” indicator while the pocket beep function is in use. (p. 146)
• During DV mode operation:
  - “D SQL” appears while the digital call sign squelch function is in use. (p. 151)
  - “CSQL” appears while the digital code squelch function is in use. (p. 151)
  - “(••)” appears with the “D SQL” or “CSQL” indicator while the pocket beep function is in use. (p. 151)

DUPLEX INDICATORS (p. 23)
“DUP” appears when plus duplex, “DUP–” appears when minus duplex (repeater) operation is selected.

KEY LOCK INDICATOR (p. 16)
Appears when the key lock function is activated.
PANEL DESCRIPTION

Function guide indicator
The function guides give you easy menu access to a variety of functions. Two function guides are available.

- Secondary function guides

<table>
<thead>
<tr>
<th>SCAN</th>
<th>TONE</th>
<th>UR</th>
<th>RX-CS</th>
<th>DUP</th>
<th>DTMF</th>
</tr>
</thead>
<tbody>
<tr>
<td>VFO/MHz</td>
<td>M/CALL</td>
<td>DR</td>
<td>CS</td>
<td>LOW</td>
<td>MONI</td>
</tr>
</tbody>
</table>

These function guides indicate the secondary functions for below the keys. Push and hold for 1 sec to activate the indicated functions. See page 2 to 3 (⑤ to ⑩).

- Set condition guides

Set condition guides appear when the transceiver enters the MENU screen, select memory write state, etc.

CLEAR KEY [CLR](DR)
- During programming state for call signs, repeater list, memory name, etc., push to erase the selected character. (pgs. 30, 32, 33, 39, 40, 94)
- During programming state for call signs, repeater list, memory name, etc., push and hold for 1 sec to erase all character following the cursor. (pgs. 30, 32, 33, 37–40, 94)

LEFT KEY [◄](CS)
- During programming state for call signs, repeater list, memory name, etc., push to move the cursor left. (pgs. 30, 32, 33, 35–40, 94)
- During MENU screen operation, push to select the upper layer. (p. 116)

RIGHT KEY [►](LOW)
- During programming state for call signs, repeater list, memory name, etc., push to move the cursor right. (pgs. 30, 32, 33, 35–40, 94)
- During MENU screen operation, push to select the lower layer. (p. 116)

ENTER KEY [►](MONI)
- During programming state for call signs, repeater list, etc., push to set or store the setting. (pgs. 30–33, 35–40, 94)
- During MENU screen operation, push to enter or exit to/from the selected set items, etc. (p. 116)

NOTE: During set condition guide indication, [BAND] key is also used instead of [◄](MONI).
## Microphone (HM-133)

### VFO/LOCK KEY [VFO/LOCK]
- Push to select the VFO mode. (p. 12)
- Push and hold for 1 sec. to turn the lock function ON or OFF. (p. 16)

### PTT SWITCH
- Push and hold to transmit; release to receive.
- Switches between transmitting and receiving while the one-touch PTT function is in use. (p. 21)

### UP/DOWN KEYS [▲]/[▼]
- Push either key to change operating frequency, memory channel, set mode setting, etc. (pgs. 12, 14, 88, 117)
- Push and hold either key for 1 sec. to start scanning. (p. 107)

### ACTIVITY INDICATOR
- Lights red while any key, except [FUNC] and [DTMF-S], is pushed, or while transmitting.
- Lights green while the one-touch PTT function is in use. (p. 21)

### KEYPAD (pgs. 8, 9)

### FUNCTION INDICATOR
- Lights orange while [FUNC] is activated—indicates the secondary function of keys can be accessed.
- Lights green when [DTMF-S] is activated—DTMF signals can be transmitted with the keypad.

### 2nd FUNCTION KEY [FUNC]

### DTMF SELECT KEY [DTMF-S] (p. 144)

### FUNCTION KEYS [F-1]/[F-2] (p. 153)
- Program and recall your desired transceiver configuration.

### BAND KEY [BAND] (p. 11)
- Push to select the operating bands.

### MEMORY/CALL KEY [MR/CALL]
- Push to select the memory mode. (p. 88)
- Push and hold for 1 sec. to select call channel. (p. 89)
## PANEL DESCRIPTION

1 PANEL DESCRIPTION

■ Optional Microphone (HM-154)

1 PTT SWITCH
Push and hold to transmit; release to receive.

2 UP/DOWN KEYS [UP]/[DN]
  ➞ Push either key to change operating frequency, memory channel, set mode setting, etc. (pgs. 12, 14, 88, 117)
  ➞ Push and hold either key for 1 sec. to start scanning. (p. 107)

3 UP/DN LOCK SWITCH
Slide to toggle [UP]/[DN] keys lock function ON and OFF.

Optional microphone (HM-103) is also available.
BASIC OPERATION

Preparation

Turning power ON/OFF

- Push and hold [ ] for 1 sec. to turn power ON or OFF.

Operating frequency band selection

The ID-E880 has 2 m and 70 cm bands for transmission and reception. In addition, extra frequency bands 127, 220, 350, 500 and 900 MHz band are available for wide-band receiver capability (depending on versions, see p. 164 for details).

- Push [BAND] several times to select the desired frequency band.

1. Push [FUNC] then push [MONI 1(BANK)] to enter the frequency band selection.
   - The frequency band is displayed.
2. Push [▲]/[▼] to select the desired frequency band.
3. Push [CLR A(MW)] to exit the state, and return to the frequency indication.

Note that in this manual, sections beginning with a microphone icon (as above), designate operation via the HM-133 microphone.

- Push [BAND] and rotate [DIAL] to select the desired frequency band.
  - Pushing [▲]/[▼] on the microphone also selects the band.
- Push [BAND] to return to frequency indication in the selected frequency band.
2 BASIC OPERATION

VFO mode
VFO mode is used to set the desired frequency.

Push [VFO/MHz] to select the VFO mode.

- When the VFO mode is already selected, the digits to the right of the 10 MHz will disappear. In this case, push [VFO/MHz] twice.

VFO mode indication

Push [VFO/LOCK] to select the VFO mode.

What is VFO?
VFO is an abbreviation of Variable Frequency Oscillator. Frequencies for both transmitting and receiving are generated and controlled by the VFO.

Memory mode
Memory mode is used for operation on the memory channels which store programmed frequencies.

1 Push [M/CALL] to select the memory mode.

- Push [M/CALL] several times to select Memory/Call channels in sequence.
- “MR” indicator appears when the memory mode is selected.

Memory mode indication

2 Rotate [DIAL] to select the desired memory channel.

- Only programmed memory channels can be selected.
- See p. 90 for memory programming details.

Memory mode operation

1 Push [MR/CALL] to select the memory mode.
2 Push [▲] or [▼] to select the desired memory channel.
Call channels
Call channels are used for quick recall of most-often used frequencies.

1. Push [M/CALL] several times to select call channels.
   - Memory/Call channels can be selected in sequence.
   - “C0” or “C1” appears when call channel is selected.
2. Rotate [DIAL] to select the desired channel.

   Call channel indication

DR (D-STAR Repeater) mode
DR (D-STAR Repeater) mode is used for D-STAR repeater operation. In this mode, you can select the pre-programmed repeaters and UR call sign easily.

1. Push [DR] to select the DR mode.
   - “DR” appears when the DR mode is selected.

   DR mode indication

2. Rotate [DIAL] to select the desired access repeater.
   - While rotating [DIAL], S/RF meter indicates group number.
   - Only programmed access repeaters in RPT-L menu can be selected. See p. 34 for RPT-L (repeater lists) programming details.

   NOTE: If All reset is performed, “NO RPT” indication appears. In this case, you should program the repeater list before operating the DR mode.
Using the tuning dial

① Rotate [DIAL] to set the frequency.
   • If the VFO mode is not selected, push [VFO/MHz] to select the VFO mode.
   • The frequency changes in the selected tuning steps. (p. 15)
② To change the frequency in 10 MHz (or 1 MHz) steps, push [VFO/MHz] once or twice, then rotate [DIAL].
   Push [VFO/MHz] again.
   • Pushing and holding [VFO/MHz] for 1 sec. starts scan function.
     If scan starts, push [VFO/MHz] again to cancel it.

Using the [▲]/[▼] keys

Push [▲] or [▼] to select the desired frequency.
• Pushing and holding [▲]/[▼] for 1 sec. activates a scan. If scan starts, push [▲]/[▼] or [CLR A(MW)] to cancel it.
Using the keypad

The frequency can be set directly via numeral keys on the microphone.

1. Push [VFO/LOCK] to select the VFO mode, if necessary.
2. Push [ENT C(T-OFF)] to activate the keypad for digit input.
3. Push 6 keys to input a frequency.
   - When a digit is mistakenly input, push [ENT C(T-OFF)] to clear the input, then repeat input from the 1st digit.
   - Pushing [CLR A(MW)] clears input digits and retrieves the frequency.

[EXAMPLE]: Setting frequency to 145.3625 MHz.

Tuning step selection

Tuning steps are the minimum frequency change increments when you rotate [DIAL] or push [▲]/[▼] on the microphone. Independent tuning steps for each frequency band can be set for your convenience. The following tuning steps are available.

- 5 kHz*
- 6.25 kHz*
- 8.33 kHz†
- 10 kHz
- 12.5 kHz
- 15 kHz*
- 20 kHz
- 25 kHz
- 30 kHz
- 50 kHz
- 100 kHz
- 125 kHz
- 200 kHz

*Not selectable in 900 MHz band. †Appears for VHF air band only.

**NOTE:** For convenience, select a tuning step that matches the frequency intervals of repeaters in your area.

1. Enter “TS” in MENU screen.

2. Rotate [DIAL] to select the desired tuning step.
3. Push [MENU] to exit the set mode.
2 BASIC OPERATION

Lock functions

To prevent accidental frequency changes and unnecessary function access, use the lock function. The transceiver has 2 different lock functions.

◊ Frequency lock
This function locks [DIAL] and keys electronically and can be used together with the microphone lock function.

Push and hold [MENU] for 1 sec. to turn the lock function ON or OFF.

• [PTT], [MONI] (monitor function only), [VOL] and [SQL] can be used while the channel lock function is in use. Also, TONE-1, TONE-2, DTMF tones or DTMF memory contents can be transmitted from the microphone.

Push and hold [VFO/LOCK] for 1 sec. to turn the lock function ON or OFF.

◊ Microphone keypad lock
This function locks the microphone keypad.

Push [FUNC] then [SQL ▼ D(16KEY-L)] to turn the microphone keypad lock function ON or OFF.

• [PTT], [VFO/LOCK], [MR/CALL], [BAND], [▲], [▼], [F-1], [F-2], [DTMF-S] and [FUNC] on the microphone can be used.
• All keys on the transceiver can be used.
• The keypad lock function is released when the power is turned OFF then ON again.
Receiving

① Set the audio level.
- Push [MONI] to open the squelch.
- Rotate [VOL] to adjust the audio level.
- Push [MONI] to close the squelch.
② Set the squelch level.
- Rotate [SQL] fully counterclockwise in advance, then rotate [SQL] clockwise until the noise just disappears.
  • When interference due to strong signals is received, rotate [SQL] clockwise past 13 o’clock for attenuator operation.
(p. 19)
③ Set the operating frequency. (pgs. 14, 15)
④ When receiving a signal on the selected frequency, squelch opens and the transceiver emits audio.

Appears when receiving a signal.

The audio and squelch level can also be adjusted with [VOL▲ (TONE-1)]/[VOL▼ 0 (TONE-2)] and [SQL▲ D(MUTE)]/[SQL▼ #(16KEY-L)], respectively.
  • “VOL” for audio or “SQL” for squelch appears during set.

Transmitting

CAUTION: Transmitting without an antenna may damage the transceiver.

NOTE: To prevent interference, listen on the channel before transmitting by pushing [MONI], or [MONI 1 (BANK)] on the microphone.

① Set the operating frequency. (pgs. 14, 15)
  • Select output power if desired. See the section at next page for details.
② Push and hold [PTT] to transmit.
  • “TX” appears.
  • The S/RF indicator shows the output power selection.
  • A one-touch PTT function is available. See p. 21 for details.
③ Speak into the microphone using your normal voice level.
  • DO NOT hold the microphone too close to your mouth or speak too loudly. This may distort the signal.
④ Release [PTT] to return to receive.

IMPORTANT! (for 50 W transmission):
The ID-E880 is equipped with protection circuits to protect the power amplifier circuit from high temperature. When the transceiver temperature becomes extremely high, the transceiver reduces transmit output power to 5 W (approx.) automatically.
2 BASIC OPERATION

Selecting output power

The transceiver has 3 output power levels to suit your operating requirements. Low output powers during short-distance communications may reduce the possibility of interference to other stations and will reduce current consumption.

Push [LOW] several times to select the output power.
- “LOW” appears when low output power; “MID” appears when middle output power; no indication appears when high output power is selected.
- The output power can be changed while transmitting.

<table>
<thead>
<tr>
<th>S/RF INDICATOR</th>
<th>POWER OUTPUT</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>VHF</td>
</tr>
<tr>
<td>High:</td>
<td>50 W</td>
</tr>
<tr>
<td>Mid:</td>
<td>15 W*</td>
</tr>
<tr>
<td>Low:</td>
<td>5 W*</td>
</tr>
</tbody>
</table>

*approx.

The microphone can also be used to select output power.

Push [HIGH 4(DTCS)] for high output power; [MID 5(DTCS)] for middle output power; and [LOW 6(DTMF)] for low output power.
- The output power can be changed via the microphone during receive only.

Operating mode selection

Operating modes are determined by the modulation of the radio signals. The transceiver has total 5 operating modes (FM, FM-N, AM, AM-N and DV modes). The mode selection is stored independently for each band and memory channel.

Typically, AM mode is used for the air band (118–136.995 MHz), and only receive is available.

1. Select the desired frequency band in the VFO mode, or the desired memory channel.
2. Push and hold [MODE](BAND) for 1 sec., then rotate [DIAL] to select the desired operating mode between FM, FMN, AM, NAM and DV.
   - Push [MODE](BAND) again to return to the frequency indication.

[MODE]

Selected operating mode is displayed.
Squelch attenuator

The transceiver has an RF attenuator related to the squelch level setting. Approx. 10 dB attenuation is obtained at maximum setting.

The squelch attenuator allows you to set the minimum signal level needed to open the squelch. The attenuator function can be deactivated in FUNC set mode (SET).

Rotate [SQL] clockwise past the 13 o’clock position to activate the squelch attenuator.

- Attenuation level can be adjusted up to 10 dB (approx.) between 13 o’clock and fully clockwise position.

NOTE: The squelch attenuator functions even when the monitor function is in use. We recommend setting the [SQL] control between the 10 and 13 o’clock positions when using the monitor function.

Squelch attenuator setting

1. Enter “AT-ATT” in FUNC set mode (SET).

MENU ➔ SET ➔ FUNC ➔ AT-ATT (p. 127)
(Push [MENU ➔], (Rotate [DIAL], then push [⿴](MONI).)

2. Rotate [DIAL] to turn the squelch attenuator function ON or OFF.

- Select “OFF” to deactivate the squelch attenuator function.

3. Push [MENU ➔] to exit the set mode.
## Monitor function

This function is used to listen to weak signals without disturbing the squelch setting.

- Push [MONI] to open the squelch.
  - “BUSY” blinks.
  - Push [MONI] again to cancel the function.

- Push [MONI 1(BANK)] to open the squelch.
  - Push [MONI 1(BANK)] again to cancel the function.

**NOTE:** When the [SQL] adjustment is set too far clockwise, (13–17 o’clock position) the squelch attenuator is activated. To monitor weak signals on the operating frequency, deactivate the squelch attenuator function. See page 19 for details.

## Audio mute function

This function temporarily mutes the audio without disturbing the volume setting. (microphone only)

- Push [FUNC] then [SQL▲ D(MUTE)] to mute audio signals.
  - Push [CLR A(MW)] (or any other key) to cancel the function.

Shows above indications alternately
One-touch PTT function

The PTT switch can be operated as a one-touch PTT switch (each push toggles between transmit/receive). Using this function you can transmit without pushing and holding the PTT switch.

To prevent accidental, continuous transmissions with this function, the transceiver has a time-out timer. See p. 128 for details.

1. Push [FUNC] then [PRIO 3(PTT-M)] to turn the one-touch PTT function ON.
   - The activity indicator lights green.
2. Push [PTT] to transmit and push again to receive.
   - A beep sounds when transmission is started and a long beep sounds when returning to receive.
3. Push [FUNC] then [PRIO 3(PTT-M)] to turn the one-touch PTT function OFF.
   - The activity indicator goes out.
REPEATER OPERATION

General

Repeaters allow you to extend the operational range of your radio because a repeater has much higher output power than the typical transceiver.

Usually, a repeater has independent frequencies for receive and transmit. The repeater may also require a subaudible tone for access.

Reference amateur radio handbooks and local ham magazines for details of local repeaters such as repeater input/output frequencies and locations.

Repeater example;
Receives the 434.540 MHz signal and the detected audio signals are transmitted on 439.540 MHz simultaneously.

Station A:
Tx: 434.540 MHz
Rx: 439.540 MHz

Station B:
Tx: 434.540 MHz
Rx: 439.540 MHz

• Repeater operation flow chart
  
  Step 1:
  Set the desired band to operate the repeater.

  Step 2:
  Set the desired receive frequency (repeater output frequency).

  Step 3:
  Set the duplex (shift) direction (– duplex or +duplex).
  - Set the offset frequency (amount of shift), if required.

  Step 4:
  Set the subaudible tone (repeater tone) encoder function ON.
  - Set the subaudible tone frequency, if required.

• Repeater settings can be stored into a memory channel.
Accessing a repeater

1. Set the receive frequency (repeater output frequency).
   (pgs. 14, 15)
2. Push and hold [DUP](LOW) for 1 sec. to enter the duplex setting condition.
3. Rotate [DIAL] to select minus duplex or plus duplex.
   • “DUP–” or “DUP” appears to indicate the transmit frequency for minus shift or plus shift, respectively.
   • Push [DUP](LOW) again to return to the frequency indication.
4. Push and hold [TONE](M/CALL) for 1 sec. to enter the tone setting condition.
5. Rotate [DIAL] to turn ON the subaudible tone encoder, according to repeater requirements, then push [TONE](M/CALL).
   • “T” appears
   • 88.5 Hz is set as the default; refer to p. 25 for tone frequency settings.
   • When the repeater requires a different tone system, see p. 26.
   • The displayed frequency automatically changes to the transmit frequency (repeater input frequency).
   • If “OFF” appears, confirm that the frequency offset (p. 27) is set correctly.
8. Push [MONI] to check whether the other station’s transmit signal can be received directly.
9. To return to simplex operation, push and hold [DUP](LOW) then rotate [DIAL], to clear the “DUP–” or “DUP” indicator.
   • Push [DUP](LOW) again to return to frequency indication.
10. To turn OFF the subaudible tone encoder, push and hold [TONE](M/CALL) then rotate [DIAL] until no tone indicator (OFF) appears.
    • Push [TONE](M/CALL) again to return to frequency indication.
Setting the receive frequency (repeater output frequency). (pgs. 14, 15)

2 Push [DUP– 7(TONE)] to select minus duplex; push [DUP+ 8(TSQL)] to select plus duplex.
   • “DUP–” or “DUP” appears.

3 Push [FUNC] then [DUP– 7(TONE)] to turn ON the subaudible tone encoder according to repeater requirements.
   • Refer to p. 25 for the tone frequency setting.
   • When the repeater requires a different tone system, see p. 26.

4 Push and hold [PTT] to transmit.

5 Release [PTT] to receive.

6 Push [MONI 1(BANK)] to check whether the other station’s transmit signal can be received directly.

7 Push [SIMP 9(TSQL)] to return to simplex operation.
   • “DUP+” or “DUP–” indicator disappears.

8 To turn OFF the subaudible tone encoder, push [FUNC] then [ENT C(T-OFF)].
**Subaudible tones** (Encoder function)

- **Subaudible tones**
  1. Select mode/channel for which you wish to set the subaudible tones, such as the VFO mode or a memory/call channel. (Subaudible tone is available in FM/FM-N only.)
     - The subaudible tone frequency is independently programmed into each mode, band or channel.
  2. Enter “R TONE” in DUP.T menu.

- **NOTE:** The subaudible tone encoder frequency can be set in a memory/call channel temporarily. However, the set frequency is cleared once another memory channel or the VFO mode is selected. To store the tone frequency permanently, overwrite the channel information.
3 REPEATER OPERATION

♦ DTMF tones

Push [DTMF-S], then push the keys of the desired DTMF digits.
• The function indicator lights green.
• 0–9, A–D, * (E) and # (F) are available.
• When “1” is displayed in place of the 100 MHz digit, cancel the DTMF memory encoder in advance. (p. 143)
• Push [DTMF-S] again to return the keypad to normal function control.

✔ For your convenience!
The transceiver has 16 DTMF memory channels for autopatch operation. See p. 144 for details.

♦ 1750 Hz tone

The microphone has 1750 Hz tone capability, used for ring tone when calling, etc.

1 Push [FUNC].
• The function indicator lights orange.
2 Push [*(TONE-1)] to transmit a 1750 Hz tone call signal for 0.5 sec.; push and hold [0(TONE-2)] to transmit a 1750 Hz tone call signal for an arbitrary period.
• The function indicator goes out automatically.
Frequency offset

When communicating through a repeater, the transmit frequency is shifted from the receive frequency by an amount determined by the frequency offset. Independent offset frequencies can be set for each operating frequency band.

1. Select the desired mode/channel for which you wish to set the offset frequency, such as the VFO mode or a memory/call channel.
   - The frequency offset is independently programmed into each mode, band or channel.
2. Enter “OFFSET” in DUP.T menu.
   - Enter “OFFSET” in DUP.T menu.
3. Rotate [DIAL] to set the desired frequency offset, then push [MONI].
   - Push [VFO/MHz] to turn 10 MHz or 1 MHz tuning ON or OFF

1. Push [BAND] to select the desired band.
   - Enter the desired frequency via the keypad if necessary.
2. Select the desired mode/channel for which you wish to set the offset frequency, such as the VFO mode or a memory/call channel.
   - The frequency offset can be independently programmed into each mode, band or channel.
3. Enter “OFFSET” in DUP.T menu.
   - Enter “OFFSET” in DUP.T menu.
4. Push [▲] or [▼] to set the desired offset.
   - Direct frequency entry from the keypad is not possible.
5. Push [CLR A(MW)] to exit the set mode.

NOTE: The frequency offset can be set in a memory/call channel temporarily. However, the set frequency is cleared once another memory channel or the VFO mode is selected. To store the frequency offset permanently, overwrite the channel information.
About the D-STAR system

In the D-STAR (Digital Smart Technologies for Amateur Radio) system, repeater linking via a 10 GHz backbone and/or internet gateway provides you with much wider coverage range during digital voice mode operation.

- **D-STAR system outline**

In traditional repeater operation, stations that are communicating must both be in the repeater's operating area. However, D-STAR repeaters can be linked via a 10 GHz backbone, as shown in the illustration at left. Using D-STAR, stations A and B can communicate even though they are in widely separated repeater operating areas.

Furthermore, D-STAR repeaters can be linked through an internet gateway, which can extend the communication range dramatically. For example, when station B uses the internet gateway connection, it can communicate with station C even though they are thousands of miles apart! By using the gateway connection, long distance communication is possible using 144 or 430 MHz digital voice!

In the D-STAR system, an independent repeater's operating area is called an Area and a group of linked repeaters via a 10 GHz backbone is called a Zone.

---

**About time-out timer function**

The ID-E880 has a time-out timer function for digital repeater operation. The timer limits a continuous transmission to approx. 10 min. Warning beeps will sound approx. 30 sec. before time-out and then again immediately before time-out.
**System description**

**Area:**
The Area is the communication range that is covered by a single repeater. The repeater is called an area repeater in the D-STAR system.

**Link repeater:**
The microwave (10 GHz) link repeater provides to linking with another repeater site (Area) for zone construction.

**Zone:**
The Zone is composed of several areas, that are linked by a 10 GHz microwave link. The areas 1 to 4 and 5 to 8 make up a zone at the example above.

**Gateway repeater:**
Gateway repeaters provide communications between different zones via the internet. The repeater 3 and 6 are gateway repeaters at the example above.
■ Call sign programming

Four types of current call sign memory are available; “MY” (my call sign=your own call sign) “UR” (your call sign=other station call sign) “RPT1” (access repeater call sign) and “RPT2” (linked repeater call sign). Each call sign can be programmed with up to 8 characters.

In addition, "MY" can store up to 6 call signs, and "UR" can store up to 60 call signs in the call sign memory. Up to 300 repeater call signs can be stored in the repeater list.

◇ Your own call sign programming

Your own call sign must be programmed for both digital voice and low-speed data communications (including GPS transmission).

1. Enter “MY” in call sign screen.

   Enter “MY” in call sign screen.

   MENU ♦ CALL-S ♦ MY
   (Push [MENU]), (rotate [DIAL], then push [MONI].)

   • MY call sign screen is displayed.

2. Rotate [DIAL] to select the desired call sign memory, “MY1” to “MY6.”

   Rotate [DIAL] to select the desired call sign memory, “MY1” to “MY6.”

3. Push [▶](LOW) to enter call sign programming mode.

   • The 1st digit blinks.

4. Rotate [DIAL] to select the desired character or code.

   • Push [▶](LOW) to move the cursor right; push [◀](CS) to move the cursor left.

5. Repeat the step 4 to enter your own call sign.

   • Call sign can be up to 8 digits long.
   • If an unwanted character is entered, push [▶](LOW) or [◀](CS) to select the character, then push [CLR](DR) to erase the selected character, or push and hold [CLR](DR) for 1 sec. to erase all characters following the cursor.
   • To program a note (up to 4 characters, for operating radio type, area, etc.), go to step 6, otherwise go to step 8.

6. Push [▶](LOW) several times to set the cursor beside “/” indication.
7 Repeat step 4 (at previous page) to program the desired 4 character note.

8 Push [MENU] (MONI) to store the programmed call sign with note and return to call sign screen.

9 Push [MENU] to return to frequency indication.
4 DV MODE PROGRAMMING

◊ Station call sign programming

Station call sign must be programmed to call a specific station as well as for repeater operation in both digital voice and low-speed data communications.

1. Enter “UR” in call sign screen.

   MENU ☺ CALL-S ☺ UR
   (Push [MENU], (rotate [DIAL], then push [MONI].)
   • UR call sign screen is displayed.

2. Rotate [DIAL] to select the desired call sign memory, “U01” to “U60.”

   • The 1st digit blinks.

4. Rotate [DIAL] to select the desired character or code.
   • Push [LOW] or [CS] to move the cursor right or left, respectively.

5. Repeat the step 4 to enter the desired station call sign.
   • Up to an 8 digit call sign can be set.
   • If an unwanted character is entered, push [LOW] or [CS] to select the character, then push [CLR] to erase the selected character, or push and hold [CLR] for 1 sec. to erase all characters following the cursor.

7. Push [MENU] to return to frequency indication.

✔ For your information

The ID-E880 has a call sign edit record function. When editing a call sign stored in a call sign memory (or regular memory/call channel), the default setting is to store the edited call sign into a blank channel automatically. (When all call sign memories are already programmed, the edited call sign will overwrite the selected channels call sign.) The programmed call sign can be over-written when the setting of “EDIT R” (Edit record) is set to OFF or SEL. (p. 135) However, you must manually over-write a reprogrammed call sign in regular memory/call channels (temporary operation without over-writing is possible).
◊ Current repeater call sign programming

“RPT1” or “RPT2” can store current call sign only, and repeater call signs must be stored in the repeater list (p. 34).

1. Enter “RPT1” or “RPT2” in call sign screen.

   Enter “RPT1” or “RPT2” in call sign screen.

   MENU ↪ CALL-S ↪ RPT1 or RPT2
   (Push [MENU]→(DIAL), then push [MONI].)

   • RPT1/RPT2 call sign screen is displayed.

   • Push [→](LOW) to enter call sign programming mode.
   • The 1st digit blinks.

   2. Push [→](LOW) to enter call sign programming mode.
   • The 1st digit blinks.

   3. Rotate [DIAL] to select the desired character or code.
   • Push [→](LOW) or [←](CS) to move the cursor right or left, respectively.

   4. Repeat the step 3 to enter the desired repeater call sign.
   • Call sign can be up to 8 digits long.
   • If an unwanted character is entered, push [→](LOW) or [←](CS) to select the character, then push [CLR](DR) to erase the selected character, or push and hold [CLR](DR) for 1 sec. to erase all characters following the cursor.

   5. Push [←](MONI) to store the programmed call sign and returns to call sign screen.

Repeater list

The ID-E880 can store up to 300 repeater call signs. The repeater list also stores the repeater name and access repeater setting, etc.

The outline of repeater list is follows:
1. Selection for new repeater program or changing a list
2. Selection for a programmed repeater lists
3. Repeater programming (Repeater name, Call sign, Gateway repeater call sign, Repeater group, etc.)
4. Access repeater programming (Down link frequency, Duplex direction, Frequency offset)

Repeater list contents

The following information can be programmed into repeater lists:
- R-NAME (Repeater name) (pgs. 35, 39)
- CALL-S (Repeater call sign) (pgs. 35, 39)
- GW CAL (Gateway repeater's call sign) (pgs. 36, 40)
- GROUP (Repeater group) (p. 36)
- R1 USE (RPT1 use) (p. 37)

When R1 USE is selected YES, following contents appear.
- FREQ (Repeater output frequency) (p. 37)
- DUP (Duplex direction) (p. 38)
- OFF SET (Frequency offset) (p. 38)

NOTE: Repeater lists can be erased by static electricity, electric transients, etc. In addition, they can be erased by malfunction and during repairs. Therefore, we recommend that memory data be written down or be saved to a PC using the CS-80/880 CLONING SOFTWARE (free download).
Repeater list programming

◇ New repeater list programming

1. Enter “ADD-L” in RPT-L menu.

MENU ⇄ RPT-L ⇄ ADD-L
(Push [MENU], (rotate [DIAL], then push [MONI].))

• “R-NAME” appears.

Repeater call sign programming (CALL S)

• Repeater call sign programming screen is displayed.

Repeater name programming (R-NAME)

2. Push [MONI] to enter the repeater name programming state. See p. 39 for repeater name programming details.

• Repeater name programming screen is displayed.

3. Program the repeater name, then push [MONI] to exit the state.

• Rotate [DIAL] to select the desired character, number, symbol or space.

4. Rotate [DIAL] to select the next content (repeater call sign programming).

4DV MODE PROGRAMMING
4 DV MODE PROGRAMMING

**Gateway repeater call sign programming (GW CAL)**

8 Push [ MONI ] to enter the gateway repeater call sign programming state. See p. 40 for gateway repeater call sign programming details.
- Gateway repeater call sign programming screen is displayed.
- Programmed repeater call sign is displayed and the 8th digit is automatically added or replaced to “G.”

9 When the programmed repeater has gateway capability, push [ MONI ] to exit gateway repeater setting and skip to 12. Or when the programmed repeater has a different repeater for gateway communication, follow the next step 10.
- When the repeater does not have a gateway repeater, follow the next step 10, too.

10 Program the other gateway repeater call sign, then push [ MONI ] to exit the state.
- Rotate [ DIAL ] to select the desired character, number, symbol (’/”only) or space.
- Push [ ]/[LOW]/[ ](CS) to move the cursor right or left, respectively.
- Call sign can be up to 8 digits long, but 8th digit must be set to “G.”
- When the repeater does not have a gateway repeater, but has several linked repeaters, in the same zone, assign a common name to all repeaters. (up to 7 digits). In this case, you must set the 8th digit to “ ” (blank).

11 Rotate [ DIAL ] to select the next content (repeater group programming).

**Repeater group programming (GROUP)**

The ID-E880 has a total of 10 groups (0–9). You can assign and organize up to 300 repeater lists in the 10 groups. Group selection is helpful for quick recall of the desired repeater.

12 Push [ MONI ] to enter the repeater group programming state.
- Repeater group programming screen is displayed.
- Selected group number appears and group indicator blinks.

13 Rotate [ DIAL ] to select the desired repeater group.
- Selected group number appears and group indicator blinks.

14 Push [ MONI ] to set the repeater group and exit the state.

15 Rotate [ DIAL ] to select the next content (access repeater setting).
**Access repeater setting (R1 USE)**

The programmed repeater lists are assigned to use or not to use the access repeater (RPT1) in the DR mode. To use for RPT1, repeater frequency, duplex direction and frequency offset must be programmed.

16 Push [←](MONI) to enter the access repeater programming state.

- Access repeater programming screen is displayed.

17 Rotate [DIAL] to select “YES” or “NO.”

- When “NO” is selected, the repeater cannot be selected as the access repeater (RPT1) in the DR mode.
- When “YES” is selected, the repeater can be selected as the access repeater (RPT1) in the DR mode.

18 Push [←](MONI) to exit the state.

When “NO” is selected at step 17, skip to step 31.

When “YES” is selected at step 17, rotate [DIAL] to select the access repeater (RPT1) programming. Follow the next step 19 to program the repeater.

**Frequency programming (FREQ)**

This content appears when R1 USE is selected YES.

19 Push [←](MONI) to enter the frequency programming state.

- Frequency programming screen is displayed.

20 Rotate [DIAL] to select the frequency band.

- The selected number blinks at 1st digit.
- Push [□](LOW) to move the cursor right; push [◁](CS) to move the cursor left.
- Push and hold [CLR](DR) for 1 sec. to clear the displayed frequency.

21 Repeat step 20 until the repeater frequency is set.

22 Push [←](MONI) to set the frequency and exit the state.

23 Rotate [DIAL] to select the next content (duplex direction programming).
4 DV MODE PROGRAMMING

Duplex direction setting (DUP)
This content appears when R1 USE is selected YES.

④ Push [⇨](MONI) to enter the duplex direction setting state.
  • Duplex direction setting screen is displayed.

⑤ Rotate [DIAL] to select the duplex direction.

⑥ Push [⇨](MONI) to set the duplex direction and exit the state.

⑦ Rotate [DIAL] to select the next content (frequency offset programming).

Frequency offset programming (OFF SET)
This content appears when R1 USE is selected YES.

⑧ Push [⇨](MONI) to enter the offset frequency programming state.
  • Frequency offset programming screen is displayed.

⑨ Rotate [DIAL] to select the frequency offset.
  • The selected number blinks.
  • Push [▶](LOW) to move the cursor right; push [◄](CS) to move the cursor left.
  • Push and hold [CLR](DR) for 1 sec. to clear the displayed frequency.

⑩ Push [⇨](MONI) to set the frequency offset and exit the state.

Storing the repeater list (ADD W)
⑪ Rotate [DIAL] to select the store operation.
⑫ Push [⇨](MONI) to enter storing state.
  • “ADD W OK?” appears.

⑬ Push [⇨](MONI) again to store the list.
Repeater name programming (R-NAME)

1. Push [MONI] to enter the repeater name programming state.
   - Repeater name programming screen is displayed.
   - The 1st digit blinks.

2. Rotate [DIAL] to select the desired character, number, symbol or space.
   - The selected character blinks.
   - Push [>] (LOW) to move the cursor right; push [<] (CS) to move the cursor left.
   - Push [CLR] (DR) to erase the selected character, or push and hold [CLR] (DR) for 1 sec. to erase all characters following the cursor.

3. Repeat step 2 until the desired repeater name is programmed.
   - Up to an 8 digit name can be set.
4. Push [MONI] to program the repeater name and exit the state.

Repeater call sign programming (CALL S)

1. Push [MONI] to enter the repeater call sign programming state.
   - Repeater call sign programming screen is displayed.
   - The 1st digit blinks.

2. Rotate [DIAL] to select the desired character, number or symbol ('/' only).
   - The selected character blinks.
   - Push [>] (LOW) to move the cursor right; push [<] (CS) to move the cursor left.
   - Push [CLR] (DR) to erase the selected character, or push and hold [CLR] (DR) for 1 sec. to erase all characters following the cursor.

3. Repeat step 2 until the desired repeater call sign is programmed.
   - Call sign can be up to 8 digits long.
4. Push [MONI] to program the repeater call sign and exit the state.
Gateway repeater call sign programming (GW CAL)

1. Push [↔](MONI) to enter the gateway repeater call sign programming.
   - Gateway repeater call sign programming screen is displayed.
   - Programmed repeater call sign is displayed, then the 1st character blinks.
   - The 8th digit is automatically added or replaced to “G.”

2. Rotate [DIAL] to select the desired character, number, symbol (“/” only) or space.
   - The selected character blinks.
   - Push [►](LOW) to move the cursor right; push [◄](CS) to move the cursor left.
   - Push [CLR](DR) to erase the selected character, or push and hold [CLR](DR) for 1 sec. to erase all characters following the cursor.

3. Repeat step 2 until the desired repeater call sign is programmed.
   - Call sign can be up to 8 digits long, but 8th digit must be set to “G.”

4. Push [↔](MONI) to program the gateway repeater call sign and exit the state.

Changing a repeater list

This function re-programs a repeater list’s contents. This is useful when already-programmed contents are mistaken or some contents are added to the list.

1. Enter “EDIT-L” in RPT-L menu.

   MENU ☞ RPT-L ☞ EDIT-L  
   (Push [MENU], rotate [DIAL], then push [↔](MONI).)

   • Programmed repeater name appears.

   SKIP indicator

   SKIP indicator shows the selected repeater can not be used for access repeater (RPT1) in DR mode as follow reasons.
   - “R1 USE” is set to “NO.”
   - Either “FREQ” (frequency) or “DUP” (duplex direction) has not been programmed.

2. Push and hold [BAND] for 1 sec. to enter group selection, rotate [DIAL] to select the desired group (0–9), then push [BAND].
3. Rotate [DIAL] to select the desired repeater list to be changed.
4. Push [↔](MONI) to enter the list.

5. Rotate [DIAL] to select the content to be changed, then push [↔](MONI) to enter the content and reprogram the content (see pages 35–38 for new repeater list programming details).

6. After programming is finished, rotate [DIAL] to select “ADD W” or “OVR W,” then push [↔](MONI) to store to a new list or overwrite the selected list, respectively.

When “ADD W” is selected;
• “ADD W OK?” appears.

When “OVR W” is selected;
• “OVR W OK?” appears.

7. Push [↔](MONI) again to store the list.

### Clearing a repeater list

Contents of programmed list can be cleared (erased).

1. Enter “EDIT-L” in RPT-L menu.

   [MENU] ← RPT-L ← EDIT-L
   (Push [MENU], (rotate [DIAL], then push [↔](MONI).)

   • Programmed repeater name appears.

2. Rotate [DIAL] to select the desired repeater list to be erased.
   • Push and hold [BAND] for 1 sec. to enter group selection, rotate [DIAL] to select the desired group (0–9) then push [BAND].

3. Push [↔](MONI) to enter the list.

4. Rotate [DIAL] to select “CLEAR,” then push [↔](MONI).
   • “CLEAR OK?” appears.

5. Push [↔](MONI) again to clear the list.
Digital mode operation

The ID-E880 can be operated in digital voice mode and low-speed data operation for both transmit and receive. It can also be connected to a GPS receiver (compatible with an RS-232 output/NMEA format/4800 bps/9600 bps) to transmit/receive position data.

Current call sign setting

Set the current call sign for DV operation as follows.

1. Enter “CALL-S” in MENU screen.

   MENU ➔ CALL-S
   (Push [MENU], (rotate [DIAL], then push [↔](MONI).

   • Call sign screen is displayed.

2. Rotate [DIAL] to select the desired call sign group, “UR,” “RPT1,” “RPT2” or “MY,” then push [↔](MONI).

   • Current call sign is displayed.

3. Rotate [DIAL] to select the desired call sign.

   Or push [↑](LOW) to enter the current call sign programming state (pgs. 30–33).

   • When “UR,” “RPT1” or “RPT2” is selected at step 2, push [BAND] several times to select the repeater call sign groups.

   • When repeater call sign is selected at step 2, push [M/CALL] to toggle the call sign and repeater name indications.

4. Push [↔](MONI) to set the selected call sign to the current call sign and exit the state.

5. Repeat steps 2 to 4 to set the other current call sign.

 Confirming current call sign

1. Push [CS] to enter the current call sign mode.
   - Current UR call sign is displayed.

   Appears momentarily

2. Rotate [DIAL] to select and confirm the other current call sign.
   - (“UR”), “R1,” “R2” and “MY” appears in sequence.
   - When repeater call sign is selected, push [M/CALL] to toggle the call sign and repeater name indications.

When changing the call sign

1. Push [↔](MONI) to enter the call sign selection mode.

2. Rotate [DIAL] to select the desired call sign, then push [↔](MONI).
   - When “UR,” “R1” or “R2” is selected, push [BAND] several times to select the repeater call sign groups.

Receiving a D-STAR repeater

When the ID-E880 receives a signal from a D-STAR repeater, it receives four call signs: caller’s call sign, called call sign, repeater call sign 1 (the repeater that caller accessed), and repeater call sign 2 (the linked repeater). You can copy the received call signs to current call signs, and you can also reply to a call.

Station A Station B

- Presetting
  1. Set the desired repeater frequency. (pgs. 14, 15)
  - Select output power, if desired. (p. 18)
  2. Set the shift direction of the transmit frequency. (DUP– or DUP; see p. 23 for details.)
  3. Select the DV mode. (p. 18)
  4. When signal is received, display indicates received call sign.
     See next page for information about received call signs.
5 DV MODE OPERATION

Received call sign

When a call is received in the DV mode, the calling station and the repeater call signs being used can be stored into the received call record. The stored call signs are viewable in the following manner. Up to 20 calls can be recorded.

 Desired call record indication

1. Enter RX call sign set mode.

   MENU ➔ RX CAL
   (Push [MENU ➔], (rotate [DIAL], then push [MONI]).)

   • RX call sign screen is displayed.

2. Rotate [DIAL] to select the desired record channel.

3. To confirm the received call, push [MONI] several times to select the desired call sign from CALLER, / (CALLER’s note), CALLED, RXRPT1 and RXRPT2.

   CALLER: The station call sign that made the call.
   / : 4 character note with call sign that made the call.
   CALLED: The station call sign called by the caller.
   RXRPT1: The repeater call sign used by the caller station in the same zone, or gateway repeater call sign of the down link repeater when the caller station is in a different zone.
   RXRPT2: The repeater call sign for down link repeater.

 For your information

When receiving a call, the received station call sign is automatically displayed and scrolled in sequence on the frequency display. This can be turned OFF in DV SET mode. (p.136)
One-touch reply using the call record

The stored call signs in the call record can be used to call the other station.

1. After receiving a call, push and hold [RX→CS](CS) for 1 sec.

The received call sign is displayed while pushing and holding CS.

- Set your own call sign (MY) in advance. (pgs. 30, 42, 43)
- The call sign in “CALLER” is stored as “UR,” “RXRPT1” is stored as “R2” and “RXRPT2” is stored as “R1.”
- Error beeps sound when a call sign is received incorrectly, and no call sign is set in this case.

2. Push [PTT] to transmit; release to receive.

Selecting a call record via RX CAL screen

1. Select the desired record channel in steps 1 and 2 on the previous page.
2. Push and hold [MW](S.MW) for 1 sec. to copy the record channel to current call sign.

Important!

Setting call signs with the “One-touch reply using the call record” operation as at left are for temporary operation only. Therefore, the set call signs will be over-written when another call record is used to set call signs.

- Never saved into a call sign memory.

If you want to save the set call signs, see “Copying the call record contents into call sign memory” (p. 47) for details.

For your information

When a call specifying your call sign is received, the call signs of the calling station and the repeater it is using can be automatically used for operation.

- When “CALL W (RX call sign auto write)” (p. 135) is set to “AUTO,” the station call sign in “CALLER” is set to “UR” automatically.
- When “RPT W (Repeater call sign auto write)” (p. 135) is set to “AUTO,” the repeater call sign in “RXRPT1” is stored as “R2” and “RXRPT2” is stored as “R1” automatically.

NOTE: The One-touch reply function can be used on the same network system, but it cannot be used over different network systems.
5  DV MODE OPERATION

■ Copying the call sign

♦ Copying the call sign memory contents

This function is convenient when modifying a part of the current call sign.

1. Enter the call sign menu.
   MENU ⊃ CALL-S
   (Push [MENU], rotate [DIAL], then push [MONI].)

2. Rotate [DIAL] to select “UR,” then push [MONI].

3. Rotate [DIAL] to select the desired call sign channel to be copied.
   • U01–U60 are available.

• When “AUTO” is set to “EDIT R” item

4. Push [LOW] to select the call sign programming mode.
   • The 1st digit of the selected call sign blinks.

5. Modify the selected call sign as described in “Station call sign programming” (p. 32).

6. Push [MONI] to store the modified call sign into the selected blank channel.

NOTE:
Make sure that the “EDIT R (EDIT RECORD)” item in DV set mode is set to “AUTO” or “SEL” in advance. (p. 135)

NOTE: If no blank channel is available in the station call sign memory, select the desired call sign channel number as described in step 7 of • When “SEL” is set to “EDIT R” item” below.

• When “SEL” is set to “EDIT R” item

4. Push [LOW] to select the call sign programming mode.
   • The 1st digit of the selected call sign blinks.

5. Modify the selected call sign as described in “Station call sign programming” (p. 32).

6. Push [MONI].
   • Call sign channel number blinks.

7. Rotate [DIAL] to select the desired call sign channel to store.

8. Push [MONI] to store the modified call sign into the selected channel.
Copying the call record contents into call sign memory

This is a way to copy the call record contents ("CALLER," "RXRPT1" and "RXRPT2") into call sign memory “UR” and repeater list “R-L” at the same time or individually.

1. Enter RX CAL (RX call sign) mode.

   - **MENU ↘ RX CAL**
     
     (Push [MENU], (rotate [DIAL], then push [MONI].)

   • RX call sign screen is displayed.

2. Rotate [DIAL] to select the desired record channel.

3. Push [ MONI] several times to select the desired call sign from CALLER, / (CALLER's note), CALLED, RXRPT1 and RXRPT2.

   - **CALLER**: The station call sign that made the call.
   - **/**: 4 character note with call sign that made the call.
   - **CALLED**: The station call sign called by the caller.
   - **RXRPT1**: The repeater call sign used by the caller station in the same zone, or gateway repeater call sign of the down link repeater when the caller station is in a different zone.
   - **RXRPT2**: The repeater call sign for down link repeater.

4. Push [ ] (LOW) to enter copy select mode.

   • Copy select screen is displayed.

5. Rotate [DIAL] to select the desired call sign to be copied from “C ALL,” “C UR01”–“C UR60,” “C R-L” and “CLEAR.”

   • “C ALL” selection won’t appear when either station call sign memory or repeater list has no blank channel.

6. Push [ MONI] to copy the selected record’s contents into the appropriate call sign memory or repeater lists.

   - **C ALL**: Copy the caller call sign in “CALLER” to “UR” (station call sign memory) and the repeater call sign in “RXRPT1” / “RXRPT2” to the repeater lists. This selection won’t appear when either station call sign memory or repeater list has no blank channel.

   - **C UR01—C UR60**: Copy the caller call sign in “CALLER” to “UR” (station call sign memory). This selection appears when entering the copy select mode (step 4) from “CALLER” only.

   - **C R-L**: Copy the repeater call sign in “RXRPT1” / “RXRPT2” to the repeater lists. This selection appears when entering the copy select mode (step 4) from “RXRPT1” or “RXRPT2” only.

   - **CLEAR**: Clear (erase) the selected call record contents.

7. Push [MENU] to return to frequency indication.
DR (D-STAR Repeater) mode operation

DR (D-STAR Repeater) mode is used for D-STAR repeater operation. In this mode, you can select the pre-programmed repeaters and UR call sign by using [DIAL].

• DR mode operation flow chart

**Step 1: (RPT1 selection)**
Select the access repeater.
- Access repeater scan is useful to find a repeater.

**Step 2: (UR call sign selection)**
Select UR call sign.

Calling a CQ
In the same area: CQCQCQ
To other area: Repeater name

Calling a specific station

**Step 3: (RPT2 selection)**
Select link repeater, gateway repeater or if other station is in the same area, select NOT USE.

Push PTT to transmit, release to receive.

• Access repeater scan

1. Push [DR] to select the DR mode.
   • The DV mode is selected automatically.
2. Push and hold [SCAN](VFO/MHz) for 1 sec. to start the scan.
   • Scan pauses when a signal is received.
   • Rotate [DIAL] to change the scanning direction, or resumes manually.
3. Push [SCAN](VFO/MHz) to stop the scan.

• Repeater settings can be stored into a memory channel.
**Skip setting**
Unwanted access repeater can be skipped for rapid selection or scan.

1. Enter “EDIT-L” in RPT-L menu.

   ![MENU ⊕ RPT-L ⊕ EDIT-L](image)
   
   (Push [MENU], rotate [DIAL], then push [MONI].)

   • Programmed repeater name appears.

2. Rotate [DIAL] to select the desired access repeater to be skipped.
   • Push and hold [BAND] for 1 sec. to enter group selection, rotate [DIAL] to select the desired group (0–9) then push [BAND].

3. Push [DR] to toggle the skip setting ON or OFF.
   • “SKIP” appears when the channel is set as skip channel.

   ![SKIP indicator](image)

   SKIP indicator shows the selected repeater can not be used for access repeater (RPT1) in DR mode as follow reasons.

   • “R1 USE” is set to “NO.”
   • Either “FREQ” (frequency) or “DUP” (duplex direction) has not been programmed.
5  DV MODE OPERATION

■ Calling CQ

STEP 1 (RPT1 selection)
① Push [DR] to enter the DR mode.
② Select the repeater group.

Selecting the repeater group
① Push and hold [BAND] for 1 sec., then rotate [DIAL] to select the desired repeater group.
- Only assigned groups from GRP 1–GRP 9 and GRP 0 are selectable.
② Push [BAND] again to release the group selection.

③ Rotate [DIAL] to select the access repeater.
- Only repeaters that have access repeater settings programmed are selectable.
- Group indicator appears momentarily when rotating [DIAL].
- Access repeater scan can be used for the selection. (p. 48)

STEP 2 (UR call sign selection)
④ Push and hold [UR](DR) for 1 sec. to enter the your call sign selection.
⑤ Select the group as step ②.
- Only assigned GRP 1–GRP 9, GRP 0, GRP UR and GRP CQ are selectable.
- UR call signs are selectable in GRP UR.
- “CQCQCQ” is selectable in GRP CQ.
- Push [BAND] several times to select “GRP UR,” “GRP CQ” and “GRP RP”
Calling CQ in the same area (Area CQ)

- Calling CQ in the same zone (Zone CQ)

- Calling CQ in another zone (Different zone CQ)

Calling CQ in another area (Zone CQ/Different zone CQ)

- Calling CQ in the same zone (Zone CQ)

- Calling CQ in another zone (Different zone CQ)

Push [BAND] several times to select “GRP RP” in advance.

Calling CQ in the same zone (Zone CQ)

- Calling CQ in another zone (Different zone CQ)
[52]

5 DV MODE OPERATION

■ Calling a specific station

STEP 1 (RPT1 selection)

1. Push [DR] to enter DR mode.

![Image of DR mode]

2. Select the repeater group.

Selecting the repeater group

1. Push and hold [BAND] for 1 sec., then rotate [DIAL] to select the desired repeater group.
   - Only assigned groups from GRP 1–GRP 9 and GRP 0 are selectable.

![Image of group selection]

3. Rotate [DIAL] to select the access repeater.
   - Only repeaters that have access repeater settings programmed are selectable.
   - Group indicator appears momentarily when rotating [DIAL].
   - Access repeater scan can be used for the selection. (p. 48)

![Image of access repeater selection]

STEP 2 (UR call sign selection)

4. Push and hold [UR] (DR) for 1 sec. to enter UR call sign selection.

![Image of UR selection]

5. Rotate [DIAL] to select a specific station call sign.
   - Push [BAND] several times to select “GRP UR” in advance.
Calling a specific station in the same area
(Area call)

MY call sign: JA3YUA
Station call sign: JG3YMK
Repeater ①: NARA43 (JP3YHL)

Calling a specific station in the same zone
(Zone call)

MY call sign: JA3YUA
Repeater ①: NARA43 (JP3YHL)
Repeater ④: IKOMA43 (JP3YHJ)
Station call sign: JG3YMK

Continued instructions from step ⑤ on page 52.

STEP 3 (RPT2 selection)

⑥ Push and hold [UR](DR) for 1 sec. to enter the linked repeater (RPT2) selection.

⑦ Rotate [DIAL] to select “NOT USE.”

⑧ Push [UR](DR) to exit the linked repeater selection.
⑨ Push [PTT] to transmit; release to receive.

STEP 3 (RPT2 selection)

⑥ Push and hold [UR](DR) for 1 sec. to enter the linked repeater (RPT2) selection.

⑦ Rotate [DIAL] to select the linked repeater in the same zone.
• Only repeaters that have programmed same gateway repeater appear.

⑧ Push [UR](DR) to exit the linked repeater selection.
⑨ Push [PTT] to transmit; release to receive.
5 DV MODE OPERATION

♦ Calling a specific station in another zone (Different zone call)

NOTE: If the other station has accessed the repeater at least once, the D-STAR system will connect to the repeater automatically even you don’t know where the station is (possible in the same area as you, or in the same zone or a different zone). In this case, you select “GW” as the RPT2 selection. The Auto gateway setting “GW SET” is helpful (p. 136).

Continued instructions from step 5 on page 52.

**STEP 3 (RPT2 selection)**

6 Push and hold [UR](DR) for 1 sec. to enter the linked repeater (RPT2) selection.

7 Rotate [DIAL] to select the preset gateway repeater “GW.”
   • Only repeaters that have programmed same gateway repeater appear.

8 Push [UR](DR) to exit the linked repeater selection.

9 Push [PTT] to transmit; release to receive.
Confirming the setting

1. Push [CS] to enter the setting confirmation screen.
   - Either “UR,” “R1,” or “R2” call sign is displayed.

2. Rotate [DIAL] to select and confirm the other current call sign.
   - “UR,” “R1,” “R2,” “MY,” and “FRQ” appears in sequence.

   - Name indication is available only for repeater call signs that have programmed repeater names.

4. Push [CS] again to exit the setting confirmation screen.

One-touch reply using the call record in the DR mode

The stored call signs in the call record can be used to the call. See p. 45 for “One-touch reply using the call record” (except the DR mode) for reference.

1. After receiving a call, push and hold [RX→CS](CS) for 1 sec. to select the desired call record.

   - The call sign in “CALLER” is stored as “UR.”
   - Error beeps sound when a call sign is received incorrectly, and no call sign is set in this case.

2. Push [PTT] to transmit; release to receive.

3. Push [DR] to return to the previous setting.
   - Push and hold [RX→CS](CS) also returns to the previous setting.

NOTE: If you want to save this temporary setting, push and hold [MW](S.MW) for 1 sec., then rotate [DIAL] to select the desired memory channel, call channel or VFO. Then push and hold [MW](S.MW) again to store the setting. (If you push and hold [MW](S.MW) for 2 sec. at first pushing, the setting is stored to the VFO automatically.)
Simplex operation in the VFO

Sending CQ

① Set the desired frequency. (pgs. 14, 15)
- Select output power, if desired. (p. 18)
② Set the current MY call sign to your own call sign. (p. 42)
③ Set the current UR call sign. (p. 42)

UR call sign selection
① Push and hold [UR](DR) for 1 sec. to enter UR call sign selection mode.
- Push [BAND] several times to select “GRP CQ” (CQCQCQ) “GRP UR” (UR call sign memories) and “CS” (current call sign).
- The DV mode is automatically selected.
② Rotate [DIAL] to select “CQCQCQ.”
③ Push [UR](DR) to return to frequency indication mode.

④ Push and hold [PTT] to transmit and speak into the microphone at normal voice level.
- “TX” appears and the RF meter shows the output power.
- “CQCQCQ” is displayed and scrolled in sequence on the frequency display depending on “TX CS” setting (p. 136).

⑤ Release [PTT] to return to receive.
- The other station’s call sign will be received.
- Received call signs can be stored into the received call record automatically. See page 44 for details.

Current call sign setting example (Simplex CQ)

Confirmation
① Push [CS] to enter the current call sign mode.
- Current UR call sign is displayed.
② Rotate [DIAL] to select and confirm the other current call sign.
- (“UR”), “R1,” “R2” and “MY” appears in sequence.
**Calling a specific station**

1. Set the desired frequency. (pgs. 14, 15)
   - Select output power, if desired. (p. 18)
2. Set the current MY call sign to your own call sign. (p. 42)
3. Set the current UR call sign. (p. 42)

**UR call sign selection**

1. Push and hold [UR](DR) for 1 sec. to enter UR call sign selection mode.
   - Push [BAND] several times to select “GRP CQ” (CQCQCQ) “GRP UR” (UR call sign memories) and “CS” (current call sign).
   - The DV mode is automatically selected.
2. Rotate [DIAL] to select the specific station call sign.
3. Push [UR](DR) to return to frequency indication mode.

4. Push and hold [PTT] to transmit and speak into the microphone at normal voice level.
   - “TX” appears and the RF meter shows the output power.
   - UR call sign is displayed and scrolled in sequence on the frequency display depending on “TX CS” setting (p. 136).

5. Release [PTT] to return to receive.
   - The other station’s call sign will be received.
   - Received call signs can be stored into the received call record automatically. See page 44 for details.

**Current call sign setting example (Simplex call)**

**NOTE:** The digital mode operation is vastly different from the FM mode. One of the differences is that in digital mode the squelch does not function as in the FM mode. Changing the squelch setting will not open it to hear the hiss of “white noise.” It only activates for digital squelch functions such as CSQL (Digital code squelch) or D SQL (Digital call sign squelch).
Repeater operation in the VFO

° Calling CQ in the same area (Area CQ)

1. Set the desired repeater's frequency, offset and shift direction (pgs. 14, 15, 23, 27), then select the DV mode (p. 18).

   Your own call sign (step 2) and station call sign (step 3) can also be set as same as repeater call signs in current call sign mode (step 4).

2. Set the current MY call sign to your own call sign.
   • See pgs. 42, 43 for current call sign setting details.

3. Set the current station call sign as follows:
   ➔ Push and hold [UR](DR) for 1 sec. to enter UR call sign selection mode.
   • Push [BAND] several times to select “GRP CQ,” then “CQCQCQ” is selected automatically. Push [UR](DR) again.

4. Set the current repeater's call sign as follows:
   1. Push [CS] to enter the current call sign mode.
      • UR call sign is displayed.
      • Push [M/CALL] to toggle the call sign and repeater name indications.
   2. Rotate [DIAL] to select “R1,” access repeater's call sign, then push [←→](MONI) to enter the current call sign selection mode.
   3. Rotate [DIAL] to select the desired access repeater's call sign, then push [←→](MONI) to set the call sign for “RPT1.”
      • Return to the current call sign mode.

   Pushing and holding [BAND] for 1 sec. selects the repeater group when in selection mode.

4. Rotate [DIAL] to select “R2,” linked repeater's call sign, then push [←→](MONI) to set the current call sign selection mode.
   • “RPT2” call sign screen is displayed.

5. Rotate [DIAL] to select “NOT USE,” then push [←→](MONI).
   • Return to the current call sign mode.

° Current call sign setting example

Pushing and holding [BAND] for 1 sec. selects the repeater group when in selection mode.
Calling specific station in the same area (Area call)

1. Set the desired repeater’s frequency, offset and shift direction (pgs. 14, 15, 23, 27), then select the DV mode (p. 18).

Your own call sign (step 2) and station call sign (step 3) can also be set as same as repeater call signs in current call sign mode (step 4).

2. Set the current MY call sign to your own call sign.
   • See pgs. 42, 43 for current call sign setting details.

3. Set the current station call sign as follows:
   1. Push and hold [UR](DR) for 1 sec. to enter UR call sign selection mode.
   2. Rotate [DIAL] to select the desired station call sign.
      • Push [BAND] several times to select “GRP UR” in advance.
   3. Push [UR](DR) again to return to frequency indication.

4. Set the current repeater’s call sign as follows:
   1. Push [CS] to enter the current call sign mode.
      • UR call sign is displayed.
      • Push [M/CALL] to toggle the call sign and repeater name indications.
   2. Rotate [DIAL] to select “R1,” access repeater’s call sign, then push [⇔](MONI) to enter the current call sign selection mode.
   3. Rotate [DIAL] to select the desired access repeater’s call sign, then push [⇔](MONI) to set the call sign for “RPT1.”
      • Return to the current call sign mode.

   4. Rotate [DIAL] select “R2,” linked repeater’s call sign, then push [⇔](MONI) to set the current call sign selection mode.
      • “RPT2” call sign screen is displayed.
   5. Rotate [DIAL] to select “NOT USE,” then push [⇔](MONI).
      • Return to the current call sign mode.

5. Push [PTT] to transmit; release to receive.
   • UR call sign is displayed and scrolled in sequence on the frequency display depending on “TX CS” setting (p. 136).

• Current call sign setting example

Pushing and holding [BAND] for 1 sec. selects the repeater group when in selection mode.
DV MODE OPERATION

Calling CQ in the same zone (Zone CQ)

1. Set the desired repeater’s frequency, offset and shift direction (pgs. 14, 15, 23, 27), then select the DV mode (p. 18).

Your own call sign (step 2) and station call sign (step 3) can also be set as same as repeater call signs in current call sign mode (step 4).

2. Set the current MY call sign to your own call sign.
   • See pgs. 42, 43 for current call sign setting details.

3. Set the current station call sign as follows:
   ➔ Push and hold [UR](DR) for 1 sec. to enter UR call sign selection mode.
   • Push [BAND] several times to select “GRP CQ,” then “CQC QCQ” is selected automatically. Push [UR](DR) again.

4. Set the current repeater’s call sign as follows:
   1. Push [CS] to enter the current call sign mode.
      • UR call sign is displayed.
      • Push [M/CALL] to toggle the call sign and repeater name indications.
   2. Rotate [DIAL] to select “R1,” access repeater’s call sign, then push [ITO](MONI) to enter the current call sign selection mode.
   3. Rotate [DIAL] to select the desired access repeater’s call sign, then push [ITO](MONI) to set the call sign for “RPT1.”
      • Return to the current call sign mode.

5. Push [PTT] to transmit; release to receive.
   • “CQC QCQ” is displayed and scrolled in sequence on the frequency display depending on “TX CS” setting (p. 136).

• Current call sign setting example

Pushing and holding [BAND] for 1 sec. selects the repeater group when in selection mode.
Calling a specific station in the same zone (Zone call)

1. Set the desired repeater’s frequency, offset and shift direction (pgs. 14, 15, 23, 27), then select the DV mode (p. 18).

   Your own call sign (step 2) and station call sign (step 3) can also be set as same as repeater call signs in current call sign mode (step 4).

2. Set the current MY call sign to your own call sign.
   - See pgs. 42, 43 for current call sign setting detail.

3. Set the current station call sign as follows:
   1. Push and hold [UR](DR) for 1 sec. to enter UR call sign selection mode.
   2. Rotate [DIAL] to select the desired station call sign.
      - Push [BAND] several times to select “GRP UR” in advance.
   3. Push [UR](DR) again to return to frequency indication.

4. Set the current repeater’s call sign as follows:
   1. Push [CS] to enter the current call sign mode.
      - UR call sign is displayed.
      - Push [M/CALL] to toggle the call sign and repeater name indications.
   2. Rotate [DIAL] to select “R1,” access repeater’s call sign, then push [←](MONI) to enter the current call sign selection mode.
   3. Rotate [DIAL] to select the desired access repeater’s call sign, then push [←](MONI) to set the call sign for “RPT1.”
      - Return to the current call sign mode.
   4. Rotate [DIAL] to select “R2,” linked repeater’s call sign, then push [↔](MONI) to set the current call sign selection mode.
      - “RPT2” call sign screen is displayed.

5. Rotate [DIAL] to select the desired repeater call sign in the same zone, then push [↔](MONI).

Pushing and holding [BAND] for 1 sec. selects the repeater group when in selection mode.
5 DV MODE OPERATION

♦ Calling CQ in another zone (Different zone CQ)

1 Set the desired repeater’s frequency, offset and shift direction (pgs. 14, 15, 23, 27), then select the DV mode (p. 18).
2 Set the current MY call sign to your own call sign.
   • See pgs. 42, 43 for current call sign setting detail.
3 Set the current station call sign and repeater call signs as follows:
   1 Push [CS] to enter the current call sign mode.
      • UR call sign is displayed.
      • Push [M/CALL] to toggle the call sign and repeater name indications.
   2 Push [.MONI] to enter the current call sign selection mode.
   3 Rotate [DIAL] to select the desired repeater call sign, then push [MONI] to set the call sign for “UR.”
      • Return to the current call sign mode.
   4 Rotate [DIAL] to select “R1,” access repeater’s call sign, then push [MONI] to enter the current call sign selection mode.
   5 Rotate [DIAL] to select the desired access repeater’s call sign, then push [MONI] to set the call sign for “RPT1.”
      • Return to the current call sign mode.
   6 Rotate [DIAL] to select “R2,” linked repeater’s call sign, then push [MONI] to enter the current call sign selection mode.
      • “RPT2” call sign screen is displayed.

Pushing and holding [BAND] for 1 sec. selects the repeater group when in selection mode.

7 Rotate [DIAL] to select the specified gateway repeater call sign in the same zone, then push [MONI].
   • Return to the current call sign mode.
8 Push [MENU] to return to frequency indication.
4 Push [PTT] to transmit; release to receive.
   • UR call sign is displayed and scrolled in sequence on the frequency display depending on “TX CS” setting (p. 136).

• Current call sign setting example
Calling a specific station in another zone (Different zone call)

1. Set the desired repeater’s frequency, offset and shift direction (pgs. 14, 15, 23, 27), then select the DV mode (p. 18).
2. Set the current MY call sign to your own call sign.
   - See pgs. 42, 43 for current call sign setting detail.
3. Set the current station call sign and repeater call signs as follow:
   1. Push [CS] to enter the current call sign mode.
      - UR call sign is displayed.
      - Push [M/CALL] to toggle the call sign and repeater name indications.
   2. Push [↔](MONI) to enter the current call sign selection mode.
   3. Rotate [DIAL] to select the desired station call sign, then push [↔](MONI) to set the call sign for “UR.”
      - Return to the current call sign mode.
   4. Rotate [DIAL] to select “R1,” access repeater’s call sign, then push [↔](MONI) to enter the current call sign selection mode.
   5. Rotate [DIAL] to select the desired access repeater’s call sign, then push [↔](MONI) to set the call sign for “RPT1.”
      - Return to the current call sign mode.
   6. Rotate [DIAL] to select “R2,” linked repeater’s call sign, then push [↔](MONI) to enter the current call sign selection mode.
      - “RPT2” call sign screen is displayed.
7. Rotate [DIAL] to select the specified gateway repeater call sign in the same zone, then push [↔](MONI).
   - Return to the current call sign mode.
4. Push [PTT] to transmit; release to receive.
   - UR call sign is displayed and scrolled in sequence on the frequency display depending on “TX CS” setting (p. 136).

Current call sign setting example

Pushing and holding [BAND] for 1 sec. selects the repeater group when in selection mode.
## Message operation

### TX message programming

TX messages are available for up to 5 channels and each channel can be programmed with a message of up to 20 characters.

1. Enter “TX MSG” in MESSAG (message) screen.
   
   **MENU ☞ MESSAG ☞ TX MSG**  
   (Push [MENU], (Rotate [DIAL], then push [MONI].)

   • TX MSG screen is displayed.

2. Rotate [DIAL] to select the desired transmit message channel.
   • TM1 to TM5 and OFF are available.
   • Previously message is displayed if programmed.

   • The 1st digit of the message blinks.

4. Rotate [DIAL] to select the desired character or symbol.
   • If an unwanted character is entered, push [LOW] or [CS] to select the character, then push [CLR](DR) to erase the selected character, or push and hold [CLR](DR) for 1 sec. to erase all characters following the cursor.
   • Push [LOW] to move the cursor right; push [CS] to move the cursor left.

5. Repeat the step 4 to enter the desired message.
   • Up to 20 character messages can be set.

7. Push [MENU] to return to frequency indication.

### Available characters

- (A) (B) (C) (D) (E) (F) (G) (H) (I) (J) (K) (L) (M)  
- (N) (O) (P) (Q) (R) (S) (T) (U) (V) (W)

- (:)($)(%)(&)(‘)  
- (;)(<)(=)(>)(?)( ( )( ) )  
- (?)(%)(&)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)(‘)
Message Transmission

You can toggle the message transmission function ON (TM1–TM5) and OFF. When a message channel is selected, the transceiver transmits a pre-programmed text message. (default: OFF)

1. Set the operating frequency, call signs and other settings, such as repeater operation, as desired.
2. Enter “TX MSG” in MESSAG (message) screen.
3. Rotate [DIAL] to select the desired transmit message channel.
   - TM1 to TM5 are available.
   - The message is transmitted each time when [PTT] is pushed.
   - The message is transmitted each 30 sec. automatically during continuous transmission.

When the reply call with a message is received, the call sign and the message scrolls at the frequency display.

Appears

Scrolls the received message.

For your information

The automatic received call sign and/or message indication can be turned OFF in DV SET mode, if desired.
- RX CS (RX Call sign) (p. 136)
- RX MSG (RX Message) (p. 136)

NOTE: Only one message can be stored in the ID-E880. The received message is cleared by turning power OFF, or overwritten when another message is received.
RX message indication

The received message can also be checked in MESSAG (message) screen.

① Select “RX MSG” in MESSAG (message) screen.

MENU ← MESSAG ← RX MSG
(Push [MENU], rotate [DIAL], then push [–](MONI).)

• The received message is displayed.
• Push [△](LOW) or [▼](CS) to scroll the message.

② Rotate [DIAL] to display the station call sign (caller).

③ Push [–](MONI) several times to return to RX MSG screen.

• Push [△](LOW) or [▼](CS) to scroll the call sign.

④ Push [MENU] to return to frequency indication.

Automatic reply function

The automatic reply function replies to calls by a station that specified your call sign.

Automatic reply function setting

① Enter “REPLY” in DV SET mode.

MENU ← DV SET ← REPLY (p. 134)
(Push [MENU], rotate [DIAL], then push [–](MONI).)

• REPLY (auto reply) screen is displayed.

② Rotate [DIAL] to turn the automatic reply function ON or OFF.

OFF: Deactivate the automatic reply function. (default)
ON : Reply to the call with your own call sign.

③ Push [–](MONI).

• Returns to DV SET mode automatically.

④ Push [MENU] to return to frequency indication.

The Automatic replay function is turned OFF automatically, when a manual transmission (pushing [PTT]) is performed.
### EMR communication

The EMR (Enhanced Monitor Receive) communication mode is available for digital mode operation. In the EMR communication mode, no call sign setting is necessary. When an EMR communication mode signal is received, the audio (voice) will be heard at the specified level even if the volume setting level is set to minimum level, or digital call sign/digital code squelch is in use.

1. Enter “EMR” in DV SET mode.
   - Enter “EMR” in DV SET mode.
   - **MENU + DV SET + EMR**
     (Push [MENU]), (rotate [DIAL], then push [MONI].)
   - EMR screen is displayed.

2. Rotate [DIAL] to turn the EMR communication mode ON or OFF.
   - OFF : EMR communication is set OFF. (default)
   - ON : EMR communication is set ON.
   - When “ON” is selected, “EMR” appears instead of memory channel indication.

3. Push [MONI].
   - Returns to DV SET mode.

**NOTE:** The EMR communication function is turned OFF automatically when turning transceiver's power OFF.
5  DV MODE OPERATION

## Break-in communication

The break-in function allows you to break into a conversation, where the two original stations are communicating with call sign squelch enabled.

1. While receiving an another station’s communication, push and hold [RX→CS](CS) for 1 sec. to set the communicating station's call sign.
   - When a call sign has not been received correctly, error beeps sound and no call sign is set. Try to set the call sign of a communicating signal again, or set the call sign manually.

2. Enter “BK” in DV SET mode.

```
<table>
<thead>
<tr>
<th>MENU</th>
<th>DV SET</th>
<th>BK</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Push [MENU]), (rotate [DIAL], then push <a href="MONI">leftrightarrow</a>.)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```

- BK screen is displayed.

3. Rotate [DIAL] to turn the Break-in function ON or OFF.
   - When "ON" is selected, "BK" appears instead of memory channel indication

4. Push [leftrightarrow](MONI).
   - Returns to DV SET mode.

5. Push [MENU] to return to frequency indication.

```
| 430.800 | BK |
```

- “BK” appears

6. When both stations are in standby, push [PTT] to transmit a break-in call.
   - The programmed call sign station receives the break-in call as well as your call sign.

7. Wait for the reply call from the station who receives the break-in call.

8. After receiving the reply call, communicate normally.

9. To cancel the break-in function, turn the Break-in function OFF in the DV SET mode as steps 2 to 5.

### NOTE:
The break-in function is turned OFF automatically when turning transceiver’s power OFF.
**How to use break-in?**

While operating with the digital call sign squelch (p. 151), the squelch never opens (no audio sounds) even if a call is received, unless your own call sign (“MY”) is specified. However, when the call including the “BK ON” signal (break-in call) is received, the squelch will open and audio sounds even if the call is specified for another station.

**Station C calling to Station A with “BK OFF”**

Station A and B are communicating using the digital call sign squelch.

Station B never hears that Station C is calling Station A.

**Station C calling to Station A with “BK ON”**

Station A and B are communicating using the digital call sign squelch.

Station B also hears that Station C is calling Station A.
Low-speed data communication

In addition to the digital voice communication, low-speed data communication is available. Use the optional OPC-1529R DATA COMMUNICATION CABLE with third-party serial data communication software.

**NOTE:** Turn OFF "GPS-TX" (p. 138) in advance to operate the low-speed data communication.

**Connection**
Connect the transceiver to your PC using with the optional OPC-1529R as illustrated below.

---

**Low-speed data communication application setting**
Configure the serial data communication software as follows.

- **Port**: The COM port into which you plugged the OPC-1529R
- **Baud rate**: 9600/4800 bps (p. 129)
- **Data**: 8 bit
- **Parity**: None
- **Stop**: 1 bit
- **Flow control**: Xon/Xoff

**Low-speed data communication operation**

**NOTE:** Confirm that when in AUTO, the computer controls [PTT] to send data. In AUTO you should not have to push [PTT] to send data.

1. Set the current call signs, etc. as described in “Current call sign setting” (p. 42), “Simplex operation in the VFO” (p. 56) and “D-STAR repeater operation in the VFO” (p. 58).
2. Follow the instructions for the data communication software.
3. To transmit data
   - At the same time as your voice audio, push and hold [PTT] to transmit while sending data from the PC. Release [PTT] to receive.
   - Under computer control, see Transmission condition setting at right.
Transmission condition setting

1. Enter “DATATX” in DV SET mode.

MENU → DV SET → DATATX
(Push [MENU], rotate [DIAL], then push [MONI].)

2. Rotate [DIAL] to select “PTT” or “AUTO.”
   - PTT: The input data from [DATA] are transmitted when pushing [PTT]. (default)
   - AUTO: The input data from [DATA] are transmitted automatically when the data are input.

3. Push [MONI] to return to DV SET mode, and push [MENU] to return to frequency indication.
5 DV MODE OPERATION

Other functions in the DV mode

◊ DV auto detect

The “DV” mode indicator and “FM” mode indicator blink when a non-DV signal is received during DV mode operation. When a signal other than the DV mode is received, the ID-E880 DV automatic detection switches to monitor in the FM mode.

1. Enter “DV DET” in DV SET mode.

MENU ⊕ DV SET ⊕ DV DET (p. 135)
(Push [MENU  ], (rotate [DIAL], then push [ ](MONI).)

2. Rotate [DIAL] to turn the DV automatic detect function ON or OFF.

OFF: “DV” blinks then “FM” also blinks, but the transceiver receives in the DV mode even if non-DV mode signals are received.

ON: “DV” blinks then “FM” also blinks, when the transceiver monitors the receiving signal in other than DV mode, the signal is in FM mode.

3. Push [ ](MONI) to return to DV SET mode.

4. Push [MENU  ] to return to frequency mode.

◊ Packet loss indication

While operating voice communication or low-speed data communication via the internet network from one zone to another zone, some packets may be lost due to network error (poor data throughput performance). In such a case, the ID-E880 displays “P-LOSS” instead of frequency indication on the display to indicate Packet Loss has occurred.

Appears

NOTE: The received FM audio may be distorted when receiving an FM signal with DV automatic detect function.
GPS operation

You can display GPS data when in FM, FM-N, WFM, AM and DV* modes. You can also transmit GPS data when in DV mode. To receive GPS data, connect a third-party GPS receiver that has an RS-232C output and NMEA data format. Third-party GPS receivers connect to the ID-E880 [DATA] jack.

In addition, the GPS message transmission is also available in GPS mode operation.

*Set “GPS-TX” to “DVG” or “DVA” at step 2 of next page if you want to use a 3rd party GPS receiver in DV mode.

• When connecting the GPS receiver

![Diagram of GPS receiver connection]

- OPC-1529R (optional)
- to RS-232C port (null modem adapter is required)
6 GPS/GPS-A OPERATION

Sentence formatter setting

1. Enter “GPS-TX” in GPS mode.

MENU ⊳ GPS ⊳ GPS-TX
(Push [MENU] (MENU), (rotate [DIAL], then push [DIAL] (MONI)).)

• GPS-TX screen is displayed.

2. Rotate [DIAL] to select “DVG.”
4. Rotate [DIAL] to select the desired GPS sentence, then push [DIAL] (MONI).
   • A total of 6 sentences, RMC, GGA, GLL, GSA, VTG and GSV are available.
5. Rotate [DIAL] to select to turn the sentence usage ON or OFF.
6. Push [DIAL] (MONI) to return to GPS sentence screen.
7. Repeat the steps 4 to 6 to set another GPS sentence usage.
   • Up to 4 GPS sentences are usable at the same time.

NOTE:
Set the GSV sentence to OFF when sending the GPS message to conventional digital transceivers (IC-E2820, IC-E91, IC-V82, IC-U82, IC-2200H).
The GSV sentence is incompatible with them. Those transceivers will not display GPS messages properly if sent as a GSV sentence from the ID-E880.
GPS message programming

1. Enter “TX GPS” in MESSAG screen.

   MENU  MESSAG  TX GPS  
   (Push [MENU], (rotate [DIAL], then push [MONI].)

   • TX GPS screen is displayed.

   • The 1st digit of the message blinks.

3. Rotate [DIAL] to select the desired character or symbol.

4. Push [MONI] to select 2nd digit, then rotate [DIAL] to select the desired character or code.
   • Push [MONI] to move the cursor right; push [MONI] to move the cursor left.
   • 2nd digit blinks (1st digit stops blinking).

5. Repeat step 4 to enter the desired message.
   • Up to 20-character messages can be set.

7. Push [MENU] to return to frequency indication.

GPS message automatic transmission

1. Enter “GPS.ATX” in GPS mode.

   MENU  GPS  GPS.ATX  
   (Push [MENU]), (rotate [DIAL], then push [MONI].)

   • GPS AUTO TX screen is displayed.

2. Rotate [DIAL] to select the desired position data transmitting interval from 5 sec., 10 sec., 30 sec., 1 min., 3 min., 5 min., 10 min., 30 min. or OFF.
   • The GPS message is also transmitted if programmed.

   NOTE: Your own call sign (“MY”) must be set to activate the GPS automatic transmission.

   NOTICE: “5SEC” cannot be selected when 4 GPS sentences are selected.

   • Only use GPS message automatic transmission in simplex mode.
   • Automatic GPS message transmission through a repeater may interfere with other communications.
6 GPS/GPS-A OPERATION

◊ Received GPS message indication

1. Enter “RX GPS” in MESSAG screen.

   **MENU ➔ MESSAG ➔ RX GPS**
   (Push [MENU], (rotate [DIAL], then push [MONI]).)

   • RX GPS screen is displayed.

2. Push [MONI] several times to scroll the message.

◊ Position indication

1. Enter “GPS.POS” in GPS mode.

   **MENU ➔ GPS ➔ GPS.POS**
   (Push [MENU], (rotate [DIAL], then push [MONI]).)

   • GPS POS screen is displayed.

2. Rotate [DIAL] to select the position data indication.

   • **MY POS**: Displaying own latitude and longitude.
   • **RX POS**: Displaying (caller) other station latitude and longitude.
   • **ELEVAT**: Displaying own elevation.
   • **TIME**: Displaying the time.
   • **DISTAN**: Displaying distance from (caller) other station.
   • **CALLER**: Displaying the call sign of (caller) other station.

4. Push [MONI] to return to the “GPS.POS” screen. See “MY POS” and “RX POS” operations at next page.

   • “CALLER” indication also scrolls.

5. Push [MENU] to return to frequency indication.

**NOTE:** Depending on the receiving conditions of the GPS signals, your position/elevation may change even though you are stationary.
### Selectable items

- **My position**
  - Possible indications: N 35° 45.00' MYP, S 35° 45.00' MYP

- **Received position**
  - Possible indications: N 35° 45.00' RXP, S 35° 45.00' RXP

- **Elevation**
  - Possible indications: 38 m ELE

- **Time**
  - Possible indications: 14:12:24 TIM

- **Distance**
  - Possible indications: 850 km DIS

- **Caller**
  - Possible indications: JG3 YMK LER

### Position indication

- **My position**
  - Possible indications: N 35° 45.00' MYP, S 35° 45.00' MYP

- **Elevation**
  - Possible indications: 38 m ELE

- **Time**
  - Possible indications: 14:12:24 TIM

- **Distance**
  - Possible indications: 850 km DIS

- **Caller**
  - Possible indications: JG3 YMK LER

Depending on the connected GPS receiver, “TIME” indication is not available.

These sample indications assume that “P FORM” is selected “mm.mm” and “UNITS” is selected “m.” (p. 138)
6 GPS/GPS-A OPERATION

✧ Saving own/received position data

1. Enter “GPS.POS” in GPS mode.

   MENU ➔ GPS ➔ GPS.POS
   (Push [MENU ➔], rotate [DIAL], then push [⇆](MONI).)
   • GPS POS screen is displayed.

2. Rotate [DIAL] to select the position data indication.
   • MY POS : Displaying own latitude and longitude.
   • RX POS : Displaying (caller) other station latitude and longitude.

3. Push [↔](MONI) to enter the selection.

4. Push and hold [MW](S.MW) for 1 sec. to save the selected position data to GPS memory (G00).
   • The M-CH number advances automatically in case the next M-CH already contains information.
   • 50 GPS M-CH are available.
   • Push [M/CALL] to display stored position data.

✧ Displaying direction and forward

Displaying own direction, received station’s direction and set position and direction in the GPS memory.

1. Enter “D/F” in GPS mode.

   MENU ➔ GPS ➔ D/F
   (Push [MENU ➔], rotate [DIAL], then push [↔](MONI).)
   • D/F (Direction/Forward) screen is displayed.

2. Rotate [DIAL] to select “RX,” “MY” and “GPS.M” [Indication items]

   • MY : Displays own direction, elevation and the time.
   • RX : Displays other station’s direction and distance from own position.
   • GPS.M : Displays the direction and distance from own position of alarm setting for the memorized position in the GPS memory.

3. Push [↔](MONI) to enter the selection.
   • 16 compass points are available.

4. Push [↔](MONI) several times to select other information.

5. Push [MENU ➔] to return to frequency indication.
• Direction indication example

- **N**
  - NNW
  - NNE
- **W**
  - WNW
  - (W--) NW
- **E**
  - NE (NE--)
  - ENE
  - ESE
- **S**
  - SW
  - (SW--) SW
  - SSW
  - SSE
  - (S--) S

- **MY**
  - **RX**
  - **GPS.M**
6 GPS/GPS-A OPERATION

◊ GPS data addition

1. Enter “GPS.MEM” (GPS memory) in GPS mode.

MENU ➔ GPS ➔ GPS.MEM
(Push [MENU ≦], (rotate [DIAL], then push [←](MONI).)

- GPS memory selection screen is displayed.

2. Push [←](MONI) to enter the new GPS memory channel programming state.

3. Rotate [DIAL] to select the desired items, “NAME,” “TIME,” “LAT” (LATITUDE) or “LON” (LONGITUDE), then push [↑](LOW) to edit the selected item.

4. Rotate [DIAL] to select the desired character or number.

- Push [↑](LOW) to move the cursor right; push [↓](CS) to move the cursor left.

5. Repeat step 4 to enter the desired latitude data, then push [←](MONI) to program the item.

6. Repeat steps 3 to 5 to program the other items.

- The name may contain up to 6 characters.

7. Push [←](MONI) to store the GPS data.

GPS alarm setting

GPS alarm sounds when your own position is close the specified position. This function can be set to use information from the received channel, a specified GPS memory channel or all GPS memory channels.

1. Enter “ALM-CH” in GPS mode.

MENU ↔ GPS ↔ ALM-CH
(Push [MENU], (rotate [DIAL], then push [MONI]).)

• Alarm setting screen is displayed.

2. Rotate [DIAL] to select “RX,” “CH,” “ALL” or “OFF.”
   • “RX,” “ALL”, one of the memory channel can be selected.
   • Skip next step 3 when RX, ALL or OFF is selected.

3. Push [MONI], then rotate [DIAL] to select the desired memory channel.
    • Memory name or channel number appears when the channel is selected.

4. Push [MONI] to set the alarm function and return to ALM-CH (GPS memory) screen.

5. Push [MENU] to return to frequency indication.

✓ For your information!
- When “ALL” is selected in step 2, the alarm function depends on “ALM1” setting in GPS mode (p. 84).
- When “RX” or “CH” is selected in step 2, the alarm function depends on “ALM2” setting in GPS mode (p. 85).
6 GPS/GPS-A OPERATION

â""GPS alarm setting in GPS memory channel
GPS alarm setting for a specified GPS memory channel is available on GPS memory channel indication.

1. Enter “GPS.MEM” in GPS mode.

MENU ⊗ GPS ⊗ GPS.MEM
(Push [MENU], (rotate [DIAL], then push [MONI].)

• GPS memory selection screen is displayed.

2. Rotate [DIAL] to select the desired memory channel.
   • Memory name or channel number appears when the channel is selected.

3. Push [M/CALL] to switch the alarm function ON or OFF.
   Alarm mark appers.

5. Push [MENU] to return to frequency indication.

✔ For your information!
• When the alarm setting is set to a memory channel, the alarm function depends on “ALM2” setting in GPS mode (p. 84).
GPS memory clearing

• Clear all memory channels
1. Enter “GPS.MEM” in GPS set mode.
   - MENU ◄ GPS ◄ GPS.MEM
     (Push [MENU ◄], rotate [DIAL], then push [◄](MONI).)
   • GPS memory selection screen is displayed.

2. Rotate [DIAL] to select “CLEAR ALL,” then push [◄](MONI).
   • “CLEAR OK?” appears.

3. Push [◄](MONI) again to clear all memory channels.
   • 2 beep sounds, then all memory channels are cleared.
   • Push and hold [CLR](DR) for 1 sec. also clears all memory
     channels when “CLEAR ALL” is displayed.

4. Push [◄](CS) to return to GPS.MEM (GPS memory)
   screen.

5. Push [MENU ◄] to return to frequency indication.

• Clear desired memory channel to be cleared
1. Enter “GPS.MEM” in GPS set mode as described at left.
2. Rotate [DIAL] to select the desired GPS memory channel
   to be cleared.

3. Push and hold [CLR](DR) for 1 sec. to clear the list.
   • 2 beep sounds, then the selected memory channel is cleared.
   • Remaining channels scroll up.

4. Push [◄](CS) to return to GPS.MEM (GPS memory)
   screen.

5. Push [MENU ◄] to return to frequency indication.
6  GPS/GPS-A OPERATION

◆ Alarm area 1

Sets GPS alarm active range from 00.08’ to 59.99’ in 00.01’ steps. (default: 00.25’)

1. Enter “ALM1” in GPS set mode.

MENU ⊕ GPS ⊕ ALM1
(Push [MENU][]), (rotate [DIAL], then push [←](MONI).)

- ALM1 setting screen is displayed.

When “P FORM” (position format) (p. 138) is selected “mm.mm.”

- Rotate [DIAL] to set the desired alarm area.
  - Push [▶](LOW) to move the cursor right; push [◀](CS) to move the cursor left.

2. Push [←](MONI) to set the area.

- The alarm area 1 function is available when the “GPS ALARM” function ALL is ON.

**Example:**

<table>
<thead>
<tr>
<th>Your position</th>
<th>ALM AREA1 setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>35°N/135°E</td>
<td>00.25’ (default)</td>
</tr>
</tbody>
</table>

When the target position comes into the alarm area shown above, the GPS alarm sounds.

These sample indications assume that “P FORM” is selected “mm.mm.” (p. 138)
Diamond Alarm area 2
Selects GPS alarm active range from “BOTH,” “EXTEND” and “LIMIT” when “CH” or “RX” is selected at GPS alarm setting.

1. Enter “ALM2” in GPS mode.

MENU ⊗ GPS ⊗ ALM2
(Push [MENU] ⊗ GPS ⊗ ALM2, (rotate [DIAL], then push [MONI]).)

• ALM2 setting screen is displayed.

2. Rotate [DIAL] to select the desired alarm setting, then push [MONI] (MONI) to set.

• BOTH : GPS alarm† will sound when a target position enters both 500 m* (547 Y)* and 1 km* (1094 Y)* range. (default)
• EXTEND : GPS alarm‡ will sound when a target position enters 1 km* (1094 Y)* range.
• LIMITE : GPS alarm‡ will sound when a target position enters 500 m* (547 Y)* range.

*Approximate
† One beep sounds when coming within 1 km (1094 Y) and three beep sounds when coming within 500 m (547 Y).
‡ Three beep sounds.

Example:
The target position definitions for Alarm area 2.

Alarm indication
When a target position comes into the alarm area, below indication appears.

Appears
Shows above indications alternately.

• Push any key to return to frequency indication, but “(•)” indicator continues to blink in the area.
6 GPS/GPS-A OPERATION

**GPS-A operation**

◊ **GPS-A function**
Set the following to activate the GPS-A function.
1. Select the DV mode operation (p. 18)
2. Select “GPS-TX” (GPS transmission mode) to DVA. (p. 138)
3. Set “GPS.ATX” (GPS auto transmission timer). (p. 141)
4. Set the GPS-A set items. (pgs. 139–141)

◊ **GPS-A code details**
In GPS-A operation, the following codes are transmitted to the PC connected to the ID-E880. GPS-A code is based on APRS® code. (APRS®: Automatic Position Reporting System)

**• GPS-A code details**

- Your own call sign
- Unproto address
- Time stamp h; H.M.S (Hour/Minute/Second)
- Time stamp z; D.H.M (Day/Hour/Minute)
- Latitude
- Longitude
- Data extension
- Comment
- GPS-A symbol (Car)

JA3YUA-1>API880,DSTAR*:002338h3437.38N/13534.24E>000/000/I am here! Can you watch me?
General description

The transceiver has 1050 memory channels, and 2 call channels. Memory channels include 50 scan edge memory channels (25 pairs) for storage of often-used frequencies. Also, 26 memory banks, A to Z, are available in each band for storing groups of frequencies, etc. Up to 100 channels can be assigned to a bank.

Memory channel contents

The following information can be programmed into memory channels:

- Operating frequency (pgs. 14, 15)
- Operating mode (p. 18)
- Duplex direction (+DUP or –DUP) with a frequency offset (p. 23)
- Subaudible tone encoder (p. 23), tone squelch or DTCS squelch ON/OFF (p. 146)
- Subaudible tone frequency (p. 25), tone squelch frequency or DTCS code with polarity (pgs. 147–149)
- Scan skip information (p. 108)
- Memory bank (p. 92)
- Memory name (p. 94)
- Tuning step (p. 15)
- Call sign squelch or Digital code squelch (p. 151)
- Station call sign (p. 32)
- RPT1/RPT2 call sign (p. 33)

NOTE:
Memory data can be erased by static electricity, electric transients, etc. In addition, they can be erased by malfunction and during repairs. Therefore, we recommend that memory data be written down or be saved to a PC using the CS-80/880 CLONING SOFTWARE (free download software).
Selecting a memory channel

Using the tuning dial

1. Push [M/CALL] several times to select the memory mode.
   • “MR” indicator appears.
2. Rotate [DIAL] to select the desired memory channel.
   • Only programmed memory channels can be selected.

Using the keypad

1. Push [MR/CALL] to select the memory mode.
2. Push [ENT C(T-OFF)] to activate the keypad for numeral input.
3. Push 3 appropriate digit keys to input a channel number.
   - Blank channel can be selected.
   - Push only 1 or 2 appropriate digit key(s), [VOL ▲ 0(TONE-2)] to [SIMP 9(16-KEY-L)] then push [VOL ▼ * (TONE-1)] or [SQL ▼ # (16KEY-L)] to select scan edge channels. “*” and “#” can be used for “A” and “B” respectively.

Using the [▲]/[▼] keys

1. Push [MR/CALL] to select the memory mode.
2. Push [▲] or [▼] to select and set the desired memory channel.
   • Pushing and holding [▲]/[▼] for 1 sec. activates a scan.
   • If scan is activated, push [▲]/[▼] again or push [CLR A(MW)] to stop it.
Selecting a call channel

Call channel is a pre-programmed memory channel that can be accessed by simply pushing call channel button.

(GUI) Push [M/CALL] several times to select the call channel mode, then rotate [DIAL] to select the desired call channel.

- “C0” or “C1” appears instead of memory channel number.

(GUI) Push and hold [MR/CALL] for 1 sec. to select the call channel mode then push [↑]/[↓] to select the desired call channel.

- “C0” or “C1” appears

(GUI) Push [MR/CALL] to select the memory mode, or push [VFO/LOCK] to select the VFO mode.
Memory channel programming

1. Push [VFO/MHz] to select the VFO mode.
2. Set the desired frequency:
   - Select the desired band with [BAND].
   - Set the desired frequency with [DIAL].
   - Set other data (e.g. frequency offset, duplex direction, tone squelch, current call signs, etc.), if desired.
3. Push [S.MW] to enter the select memory write mode.
   - “MW” indicator and the memory channel number blink.
4. Rotate [DIAL] to select the desired channel.
   - Call channels (C0, C1), VFO and scan edge channels (0A/0B to 24A/24B), as well as regular memory channels, can be programmed in this way.
5. Push and hold [MW] for 1 sec. to program.
   - 3 beeps sound.
   - Memory channel number automatically increases when continuing to push [MW] after programming.

**NOTE:** Push [MENU] to cancel to program and exit the select memory write mode before memory programming is finished.

**FOR YOUR CONVENIENCE**
Memory programming can be performed in various ways e.g. memory channel to the different memory channel, memory channel to the call channel, etc.

**EXAMPLE:** Programming 145.870 MHz into memory channel 20 (blank channel).

![Diagram of memory channel programming](image)
The microphone can also be used to program memory channels.

1. Set the desired frequency in the VFO mode.
   - Push [VFO/LOCK] to select the VFO mode.
   - Push [ENT C(T-OFF)], then set the frequency using the keypad.
   - Set other data (e.g. frequency offset, duplex direction, tone squelch, current call signs, etc.), if desired.
2. Push [MR/CALL] to enter the memory mode.
3. Push [ENT C(T-OFF)], then set the desired memory channel using the keypad.
4. Push [VFO/LOCK] to select the VFO mode.
5. Push [FUNC] then push and hold [CLR A(MW)] for 1 sec. to program.
   - 3 beeps may sound and the VFO contents (including the subaudible tone frequency, etc.) are programmed.
   - Memory channel number increases when continuing to push [CLR A(MW)] after programming.

[EXAMPLE]: Programming 145.870 MHz into memory channel 20 (blank channel).
Memory bank setting

The ID-E880 has a total of 26 banks (A to Z). Regular memory channels, 0 to 999, are assigned to any desired bank for easy memory management.

1. Push [S.MW] to enter the select memory write mode.
   - “MR” indicator and the memory channel number blink.
2. Rotate [DIAL] to select the desired memory channel.
3. Push [←] (MONI) to select “BANK” setting.
4. Push [←] (MONI) again.
   - Bank group and channel number are displayed if the selected memory channel has already been assigned to a bank.
5. Rotate [DIAL] to select the desired bank group from “A” to “Z”.
6. Push [▶](LOW) to select the bank channel digit, then rotate [DIAL] to select the bank channel number from “00” to “99.”
   - Push [◄](CS) to return to the bank group selection, if desired.
7. Push [←](MONI) to set the bank initial and channel number.
8. Push and hold [MW](S.MW) for 1 sec. to assign the channel to the bank.
   - Return to the previous indication before entering the select memory write mode.
Memory bank selection

1. Push [M/CALL] several times to select the memory mode.
2. Push [BAND] to enter the bank selection state.
3. Rotate [DIAL] to select the desired memory bank group, then push [BAND] again.
   - Only programmed banks are displayed.
   - Also regular memory channel can be selected.
4. Rotate [DIAL] to select the bank channel.
   - Only programmed banks are displayed.

- Regular memory channel is displayed.
- Bank channel is displayed.

1. Push [MR/CALL] to select the memory mode, if desired.
2. Push [FUNC] then [MONI 1(BANK)] to select memory bank condition.
   - Memory channel blinks
3. Push [▲]/[▼] to select the desired bank, A to Z.
   - Only programmed memory bank can be selected.
4. Push [CLR A(MW)] to set the bank.
   - Bank initial and bank channel stops blinking.
5. Push [▲]/[▼] to select the desired contents in the bank.
6. To return to regular memory condition, push [FUNC], [MONI 1(BANK)] then push [▼] several times to select memory channel number indication.

## Programming memory/bank/scan name

Each memory channel can be programmed with an alphanumeric channel name for easy recognition and can be indicated independently by channel. Memory and scan names can be a maximum of 8 characters, and bank name can be a maximum of 6 characters.

**NOTE:** Scan name indication can be turned ON or OFF in DISP set mode (SET). (p. 131)

1. **Push** [M/CALL] **to select the memory mode.**
   - To program a call channel name, push [M/CALL] to select the call channel mode.

2. **Rotate** [DIAL] **to select the desired memory channel.**
   - Select scan edge channels (0A/0B to 24A/24B) to program a scan name.

3. **Push** [S.MW] **to enter the select memory write mode.**
   - “WR” indicator and the memory channel number blink.

4. **Push** [↔](MONI).

5. **Rotate** [DIAL] **to select “B NAME,” “M NAME” or “S NAME” when programming the bank name, the memory name or the scan name, respectively.**

6. **Push** [↔](MONI).
   - A cursor blinks for the first character.

7. **Rotate** [DIAL] **to select the desired character.**
   - The selected character blinks.
   - Push [▼](LOW) to move the cursor right; push [▲](CS) to move the cursor left.
   - Push [CLR](DR) to erase the selected character, or push and hold [CLR](DR) for 1 sec. to erase all characters following the cursor.

8. **Repeat step 7** until the desired channel name is programmed.

9. **Push** [↔](MONI).

10. **Push and hold** [MW](S.MW) for 1 sec. to set the name and exit channel name programming state.
    - 3 beeps sound.

**NOTE:** Only one bank name can be programmed into each bank. Therefore, the previously programmed bank name will be displayed when bank name indication is selected. Also, the programmed bank name is assigned for the other bank channels automatically.

Selecting memory/bank name indication

During memory mode operation, either the programmed memory name or bank name can be displayed.

1. Enter “NAME” in DISP menu.
   - Enter “NAME” in DISP menu.
   - Press [MENU SET DISP NAME] (p. 131)
   - (Push [MENU SET DISP NAME], rotate [DIAL], then push [ MONI ].)

2. Rotate [DIAL] to select the memory display type.
   - OFF : Displays the frequency.
   - MEMORY : Displays the memory name.
   - BANK : Displays the bank name.

3. Push [(MONI)] to return to DISP menu.

4. Push [MENU] to return to the previous indication before entering the DISP menu.

**NOTE:** The programmed scan name is displayed during the programmed scan selection.

*1 B NAME can be set for bank assigned channels only.
*2 S NAME can be set for scan edge channels only.
7 MEMORY/CALL CHANNELS

Copying memory/call contents

This function copies a memory channel's contents to the VFO (or another memory/call channel). This is useful when searching for signals around a memory channel frequency and for recalling the frequency offset, subaudible tone frequency etc.

◇ Memory/call → VFO

1. Select the memory (call) channel to be copied.
   ➤ Push [M/CALL] several times to select the memory mode or call channel mode, then rotate [DIAL] to select the desired channel.
2. Push and hold [MW](S.MW) for 1 sec. write the selected channel contents to the VFO mode.
   • Returns to the VFO mode automatically.

[EXAMPLE]: Copying memory channel 11 to VFO.

Front panel operation:

HM-133 operation:
Memory/call → call/memory

1. Select the memory (call) channel to be copied.
   - Push [M/CALL] several times to select the memory mode or call channel mode, then rotate [DIAL] to select the desired channel.

2. Push [S.MW] to enter the select memory write mode.
   - “MR” indicator and the memory channel number blink.
   - Do not hold [S.MW](MW) for more than 1 sec., otherwise the memory contents will be copied to the VFO.

3. Rotate [DIAL] to select the target memory (call) channel.
   - Scan edge channels, 0A/0B to 24A/24B can also be selected.

4. Push and hold [MW](S.MW) for 1 sec. to write the selected channel contents to the target channel.
   - The targeted memory and copied contents are indicated.

[EXAMPLE]: Copying memory channel 11 contents to channel 15.
Memory clearing

Contents of programmed memories can be cleared (erased), if desired.

1. Push [S.MW] to enter the select memory write mode.
   - "MR" indicator and the memory channel number blink.
   - Do not hold [S.MW](MW) for more than 1 sec. in the VFO mode otherwise the selected memory channel will be overwritten.

2. Rotate [DIAL] to select the desired memory channel to be cleared.

3. Push and hold [CLR](DR) for 1 sec. to clear the contents.
   - 3 beeps sound, then the frequency is cleared.
   - "MR" indicator and the memory channel number blink continuously.

[EXAMPLE]: Clearing memory channel 14.

4. Push [MENU] to the previous indication before entering the select memory write mode.

**NOTE:** Be careful! — the contents of cleared memories CANNOT be recalled.
Erasing/transferring bank contents

The bank contents of programmed memory channels can be cleared or reassigned to another memory bank.

**INFORMATION:** Even if the memory bank contents are cleared, the memory channel contents still remain programmed.

1. Select the desired bank contents to be transferred or erased from the bank. (p. 93)
   - Push [M/CALL] several times to select the memory mode.
   - Push [BAND], then rotate [DIAL] to select the desired memory bank group, then push [BAND] again.
   - Rotate [DIAL] to select the bank channel.
     - Bank initial and bank channel stops blinking.

2. Push [S.MW] to enter the select memory write mode.
   - Displays the original memory channel number automatically, and then “MR” indicator and the memory channel number blink.
   - Do not hold [S.MW](MW) for more than 1 sec., otherwise the memory contents will be copied to the VFO.

3. Push [↔](MONI) to select “BANK” setting, then push [↔](MONI) again.

4. Push [►](LOW) to select the bank channels selection, or push [◄](CS) to select the bank group selection to be transferred.

5. Rotate [DIAL] to select the desired bank group or channel.
   - Push [CLR](DR) or select “– – – –” indication when erasing the contents from the bank.

6. After editing, push [↔](MONI) to select “BANK” setting.

7. Push [MW](S.MW) for 1 sec. to erase/transfer the bank contents.
SCAN OPERATION

Scan types

Scanning searches for signals automatically and makes it easier to locate new stations for contact or listening purposes.

**FULL SCAN** (p. 102)  
Repeatedly scans all frequencies over the entire band. Some frequency ranges are not scanned according to the frequency coverage of the transceiver's version.

**SELECTED BAND SCAN** (p. 102)  
Repeatedly scans all frequencies over the entire selected band.

**PROGRAMMED SCAN** (p. 102)  
Repeatedly scans between two user-programmed frequencies. Used for checking for frequencies within a specified range such as repeater output frequencies, etc.

**FREQUENCY/MEMORY SKIP FUNCTION** (p. 108)  
Skips unwanted frequencies or channels that inconveniently stop scanning. This setting can be turned ON or OFF for each memory channel.

**PROGRAMMED LINK SCAN** (pgs. 102, 124)  
Repeatedly programmed scans user-programmed frequencies selected at P-LINK items in the SCAN menu screen.
MEMORY (SKIP) SCAN (pgs. 105, 108)
Repeatedly scans memory channels except those set as skip channel. This setting can be turned ON or OFF for each memory channel.

ALL/SELECTED BANK SCAN (p. 106)
Repeatedly scans all bank channels or selected bank channels. The skip scan is also available.

BAND MEMORY (SKIP) SCAN (p. 105)
Repeatedly scans memory channels in the same band as displayed band.

MODE MEMORY (SKIP) SCAN (p. 105)
Repeatedly scans memory channels in the same mode as displayed mode.

BANK-LINK SCAN (pgs. 106, 124)
Repeatedly scans bank channels selected at BANK-LINK items in the SCAN menu screen.
Full/band/programmed scan

1. Push [VFO/MHz] to select the VFO mode.
   - Select the desired frequency band with [BAND] and [DIAL], if desired.
2. Set the squelch level.
3. Push and hold [SCAN](VFO/MHz) for 1 sec. to enter the scanning type selection.
4. Rotate [DIAL] to select the desired scanning type.
   - “ALL” for full scan; “BAND” for band scan, “P-LINK x (or program scan link name if programmed)” for programmed link scan (x = 0 to 9), “PROGxx (or scan name if programmed)” for programmed scan (xx = 0 to 24; only programmed scan edge numbers are displayed), “DUP” (appears only when duplex operation is set) for duplex scan, “TONE” (appears only when the subaudible tone, tone squelch or DTCS squelch is set) for tone scan.
5. Push [SCAN](VFO/MHz) to start the scan.
   - Scan pauses when a signal is received.
   - Rotate [DIAL] to change the scanning direction. This also causes the transceiver to resume scanning.
   - Push [SCAN](VFO/MHz) to stop the scan.

About the scanning steps: The selected tuning step in each frequency band (in the VFO mode) is used during scan.

Duplex scan function: Repeatedly scans two frequencies (transmission/reception) during duplex scan operation.

Scan name can be displayed instead of “P-LINK x” for program link scan (x = 0 to 9), “PROGxx” for programmed scan (xx = 0 to 24) when scan name is programmed and set to ON in DISP set mode.

Scan name is not displayed during scan.
Scan edges programming

Scan edges can be programmed in the same manner as memory channels. Scan edges are programmed into scan edges, 0A/0B to 24A/24B, in memory channels.

1. Push [VFO/MHz] to select the VFO mode.
2. Set the desired frequency:
   - Select the desired band with [BAND].
   - Set the desired frequency with [DIAL].
   - Program different frequencies in “**A” and “**B” respectively.
   - Set other data (e.g. frequency offset, duplex direction, tone squelch, etc.), if desired.
3. Push [S.MW](MW) to enter the select memory write mode.
   - “MR” indication and memory channel number blink.

[EXAMPLE]: Programming 145.300 MHz into scan edges 4A.

4. Rotate [DIAL] to select the desired programmed scan edge channel from 0A to 24A.
5. Push and hold [MW](S.MW) for 1 sec.
   - 3 beeps sound.
   - The other scan edge channel “B,” 0B to 24B, is automatically selected when continuing to push [MW](S.MW) after programming.
6. To program a frequency for the other pair of scan edges, 0B to 24B, repeat steps 2 and 5.
   - If the same frequency is programmed into a pair of scan edges, programmed scan will not function.

Push and hold [MW] for 1 sec. to program [DIAL]

Return to the VFO mode.
Programming scan edges via the microphone

1. Push [MR/CALL] to select the memory mode.
2. Select scan edge channel, 0A to 24A using [△]/[▼] or keypad.
   • Push [ENT C(T-OFF)] then push only 1 or 2 appropriate digit key(s), [VOL ▲ 0(TONE-2)] to [SIMP 9(16-KEY-L)] then push [VOL ▼ * (TONE-1)] or [SQL ▼ # (16KEY-L)] to select scan edge channels. “*” and “#” can be used for “A” and “B” respectively.
3. Set the desired frequency in the VFO mode.
   ➡ Push [VFO/LOCK] to select the VFO mode.
   ➡ Set the frequency via the keypad or [△]/[▼].
4. Push [FUNC], then push and hold [CLR A(MW)] for 1 sec. to program.
   • 3 beeps sound and the VFO is automatically selected.
   • Memory channel number advances to the next scan edge channel, 0B to 24B when continuing to push [CLR A(MW)] after programming.
5. To program a frequency for the other scan edge channels, repeat steps 1 to 4.

[EXAMPLE]: Programming 145.800 MHz into scan edges 4A.
Memory scan

**IMPORTANT:** To perform memory scan, 2 or more memory channels MUST be programmed, otherwise the scan will not start.

1. Push [M/CALL] several times to select the memory mode.
2. Set the squelch level.
3. Push and hold [SCAN](VFO/MHz) for 1 sec. to enter the scanning type selection.
4. Rotate [DIAL] to select the desired scanning type.
   - “ALL” for all memory scan; “BAND” for band memory scan, “MODE” for mode scan, “DUP” (appears only when duplex operation is set) for duplex scan, “TONE” (appears only when the subaudible tone, tone squelch or DTCS squelch is set) for tone scan.

5. Push [SCAN](VFO/MHz) to start the scan.
   - Scan pauses when a signal is received.
   - Rotate [DIAL] to change the scanning direction. This also causes the transceiver to resume scanning.
   - Push [SCAN](VFO/MHz) to stop the scan.

**Band memory scan function:** Repeatedly scans all memory channels programmed with any frequencies of the band programmed in the memory channel selected for scanning.

**Mode scan function:** Repeatedly scans all memory channels in which the same operating mode as the selected memory channel has been programmed.

**Duplex scan function:** Repeatedly scans two frequencies (transmission/reception) during duplex scan operation.
8 SCAN OPERATION

Memory bank scan

**IMPORTANT:** To perform memory bank scan, 2 or more bank channels MUST be programmed, otherwise the scan will not start.

1. Select memory bank mode.
   - Select the memory mode with **[M/CALL]**.
   - Enter the bank selection state with **[BAND]**.
   - Set the desired bank (A to Z) with **[DIAL]**, then push **[BAND]**.

2. Set the squelch level.

3. Push and hold **[SCAN]**(VFO/MHz) for 1 sec. to enter the scanning type selection.

4. Rotate **[DIAL]** to select the desired scanning type.
   - “ALL” for all bank scan; “B-LINK” for bank link scan or “BANK-x” for bank scan (x= A to Z; programmed bank groups are only displayed.), “DUP” (appears only when duplex operation is set) for duplex scan, “TONE” (appears only when the subaudible tone, tone squelch or DTCS squelch is set) for tone scan.

5. Push **[SCAN]**(VFO/MHz) to start the scan.
   - Scan pauses when a signal is received.
   - Rotate **[DIAL]** to change the scanning direction. This also causes the transceiver to resume scanning.
   - Push **[SCAN]**(VFO/MHz) to stop the scan.

During all bank/bank link scan
![All bank scan](image1)

During bank scan
![Bank scan](image2)

- The bank-link setting can be changed in SCAN set mode. See page 124 for details.

- **Duplex scan function:** Repeatedly scans two frequencies (transmission/reception) during duplex scan operation.

- Memory bank scan skips any memory channels in the selected bank that are set to “SKIP” or “PSKIP.”

- Memory bank scan stops at the first channel when all channels in a bank are set to “SKIP” or “PSKIP.”
Scan start/stop via the microphone

1. Push [VFO/LOCK] to select the VFO mode for full/band/programmed scan; push [MR/CALL] to select the memory mode for memory scan.
   - Push [FUNC] + [MONI 1 (BANK)] then push [▲]/[▼] to select a bank for memory bank scan. Push [CLR A (MW)].

2. Push [SCAN 2 (T-SCAN)].

3. Push [▲]/[▼] to select the desired scanning type.
   - For full/band/programmed scan
     “ALL” for full scan; “BAND” for band scan, “P-LINK x (or program scan link name if programmed)” for programmed link scan (x= 0 to 9), “PROGxx (or scan name if programmed)” for programmed scan (xx= 0 to 24; only programmed scan edge numbers are displayed), “DUP” (appears only when duplex operation is set) for duplex scan, “TONE” (appears only when the subaudible tone, tone squelch or DTCS squelch is set) for tone scan.
   - For memory scan
     “ALL” for all memory scan; “BAND” for band memory scan, “MODE” for mode scan, “DUP” (appears only when duplex operation is set) for duplex scan, “TONE” (appears only when the subaudible tone, tone squelch or DTCS squelch is set) for tone scan.

4. Push [SCAN 2 (T-SCAN)] again to start the scan.
5. To stop the scan push [SCAN 2 (T-SCAN)] or [CLR A (MW)].
   - Push [▲]/[▼] also stops the scan.

6. For memory bank scan
   “ALL” for all bank scan; “B-LINK” for bank link scan or “BANK-x” for bank scan (x= A to Z; programmed bank groups are only displayed.), “DUP” (appears only when duplex operation is set) for duplex scan, “TONE” (appears only when the subaudible tone, tone squelch or DTCS squelch is set) for tone scan.
7. Push [VFO/LOCK] to select the VFO mode for full scan; push [MR/CALL] to select the memory mode for memory scan.
   - Push [FUNC] + [MONI 1 (BANK)] then push [▲]/[▼] to select a bank for memory bank scan. Push [CLR A (MW)].
8. Push and hold [▲]/[▼] to start the scan.
9. Push [▲]/[▼] to stop the the scan.
### Skip channel/frequency setting

Memory channels can be set to be skipped during memory skip scan. In addition, memory channels can be set to be skipped during both memory skip scan and frequency skip scan. This is useful to speed up the scan rate.

1. Select a memory channel:
   - Push [M/CALL] to select the memory mode.
   - Rotate [DIAL] to select the desired channel to be a skip channel/frequency.

2. Push [S.MW](MW) to enter the select memory write mode.
   - “MR” indicator and the memory channel number blink.

3. Push [↔](MONI).

4. Rotate [DIAL] to select “SKIP,” then push [↔](MONI).

5. Rotate [DIAL] to select the skip condition from “SKIP,” “PSKIP” or “OFF” for the selected channel.
   - PSKIP: The channel is skipped during memory/bank scan and the programmed frequency is skipped during VFO scan, such as programmed scan.
   - SKIP: The channel is skipped during memory or bank scan.
   - OFF: The channel is scanned during any scan.

6. Push [↔](MONI), then push and hold [MW](S.MW) for 1 sec. to store the skip condition into the memory.
   - “SKIP” or “PSKIP” appears, according to the skip selection in the step 6.

---

**Program skip setting**

“SKIP” appears

**Skip channel setting**

“PSKIP” appears

**Skip channel setting**

“OFF” appears

**Program skip setting**
## Scan resume condition

### Scan pause timer

The scan pauses when receiving signals according to the scan pause time. It can be set from 2 to 20 sec. or unlimited.

1. Enter “PAUSE” in SCAN set mode.
2. Rotate [DIAL] to select the desired scan pausing time from 2–20 sec. (2 sec. steps) or “HOLD.”
   - “2SEC”–“20SEC” : Scan pauses for 2–20 sec. while receiving a signal.
   - “HOLD” : Scan pauses on a received signal until it disappears.

### Scan resume timer

The scan restarts after the signal disappears according to the resume time. It can be set from 0–5 sec. or unlimited.

1. Enter “RESUME” in SCAN set mode.
2. Rotate [DIAL] to select the desired scan resume time from 0–5 sec. (1 sec. steps) and “HOLD.”
   - “0SEC” : Scan restarts immediately after the signal disappears.
   - “1SEC”–“5SEC” : Scan restarts 1–5 sec. after the signal disappears.
   - “HOLD” : Scan remains paused on the received signal according to the scan pause timer even if it disappears. Rotate [DIAL] to resume manually.

Scan resume timer must be set shorter than the scan pause timer, otherwise this timer does not activate.
SCAN OPERATION

Skip channel/frequency setting (continued)

Setting Pause timer via the microphone

1. Push [BAND] to select the desired band.
2. Enter “PAUSE” in SCAN menu.
   - MENU  SCAN  PAUSE (p. 123)
   - (Push [SET B(D-OFF)] to enter MENU screen),
   - (Push [▲] or [▼], then push [SET B(D-OFF)].)
3. Push [▲]/[▼] to select the scan resume condition, then push [SET B(D-OFF)].
   - See step 2 at previous page for scan pause timer details.
4. Push [CLR A(MW)] to exit set mode.

Setting Resume timer via the microphone

1. Push [BAND] to select the desired band.
2. Enter “RESUME” in SCAN menu.
   - MENU  SCAN  RESUME (p. 123)
   - (Push [SET B(D-OFF)] to enter MENU screen),
   - (Push [▲] or [▼], then push [SET B(D-OFF)].)
3. Push [▲]/[▼] to select the scan resume condition, then push [SET B(D-OFF)].
   - See step 2 at previous page for scan resume timer details.
4. Push [CLR A(MW)] to exit set mode.
Priority watch types

Priority watch checks for signals on the frequency every 5 sec. while operating on a VFO frequency or scanning (except DR mode watch). The transceiver has 4 priority watch types to suit your needs.

The watch resumes according to the selected scan resume condition. See page 109 for details.

**NOTE:** If the pocket beep function is activated, the transceiver automatically selects the tone squelch function when priority watch starts.

◊ **About priority beep function**
When receiving a signal on the priority frequency, you can be alerted with beeps and a blink “(*)”. This function can be activated when setting the priority watch function ON.

---

**MEMORY/CALL CHANNEL WATCH**
While operating on a VFO frequency, priority watch checks for a signal on the selected channel every 5 sec.
• A memory channel with skip information can be watched.

**MEMORY SCAN WATCH**
While operating on a VFO frequency, priority watch checks for signals on each memory channel in sequence.
• The memory skip function and/or memory bank scan is useful to speed up the scan.

**VFO SCAN WATCH**
While scanning in the VFO mode, priority watch checks for signals on the selected channel every 5 sec.

**DR MODE WATCH**
While operating in the DR mode, priority watch checks for a signal on the VFO frequency every 5 sec.
• The access repeater scan is also available during priority watch.
Priority watch operation

Memory/call channel and memory scan watch
1. Select the VFO mode; then, set an operating frequency.
2. Select the channel(s) to be watched.

For memory channel watch:
Select the desired memory channel.

For call channel watch:
Select the desired call channel.

For memory scan watch:
- Select the memory mode, or the desired bank group.
- Push and hold [SCAN](VFO/MHz) for 1 sec. to enter the scan type selection.
- Rotate [DIAL] to select the desired scan type, then push [SCAN](VFO/MHz) again to start memory/bank scan.

3. Enter “PRIO” in SCAN set mode.

MENU ⊗ SCAN ⊗ PRIO (p. 123)
(Push [MENU], (rotate [DIAL], then push [MONI].)

4. Rotate [DIAL] to select “ON.”
   • Select “BELL” if the priority beep function is desired.
5. Push [MENU] to exit SCAN set mode and start the watch.
   • “PRIO” indicator appears.
   • The transceiver checks the memory/bank channel(s) or call channel every 5 sec.
   • The watch resumes according to the selected scan resume condition. (p. 109)

- During priority watch

![Image of VFO frequency](image1)

Monitors VFO frequency for 5 sec.

![Image of Memory Channel](image2)

Pauses on a memory or call channel when a signal is received.

- During priority watch with priority beep

![Image of VFO Frequency](image3)

Emits beep and blinks “(•)” indicator when a signal is received on a memory or call channel.
VFO scan watch

1. Select the channel(s) to be watched.
   
   **For memory channel watch:**
   Select the desired memory channel.
   
   **For call channel watch:**
   Select the desired call channel.
   
   **For memory scan watch:**
   - Select the memory mode, or the desired bank group.
   - Push and hold [SCAN] (VFO/MHz) for 1 sec. to enter the scan type selection.
   - Rotate [DIAL] to select the desired scan type, then push [SCAN] (VFO/MHz) again to start memory/bank scan.
   
2. Enter “PRIO” in SCAN set mode.
   
   ![MENU ✦ SCAN ✦ PRIO (p. 123)](Push [MENU], (rotate [DIAL], then push [MONI]).)

3. Rotate [DIAL] to select “ON.”
   • Select “BEL” if the priority beep function is desired.

4. Push [MENU] to exit SCAN set mode and start the watch.
   • “PRIO” indicator appears.

5. Push and hold [SCAN] (VFO/MHz) for 1 sec. to enter scan type selection.

6. Rotate [DIAL] to select the desired scan type from “ALL,” “BAND” “P-LINK x (x= 0–9)” and “PROGxx (xx= 0–24),” “DUP.”

7. Push [SCAN] (VFO/MHz) to start the VFO scan watch.
   • The transceiver checks the memory/bank channel(s) or call channel every 5 sec.
   • The watch resumes according to the selected scan resume condition. (p. 109)

### During priority watch

Searches VFO frequencies for 5 sec.

Pauses on a memory or call channel when a signal is received.

### During priority watch with priority beep

Emits beep and blinks “(●)” indicator when a signal is received on a memory or call channel.
Memory/call channel and memory scan watch via the microphone

1. Select the VFO mode; then, set the desired frequency.
2. Set the watched channel(s).

For memory channel watch:
Push [MR/CALL] then [▲] or [▼] to select the desired memory channel.

For memory scan watch:
❖ Select the memory mode, or desired bank group.
❖ Push [SCAN 2(T-SCAN)] to enter the scan type selection.
❖ Push [▲] or [▼] to select the desired scan type, then push [SCAN 2(T-SCAN)] to start the memory scan.

For call channel watch:
Push [MR/CALL] for 1 sec. then push [▲] or [▼] to select the call channel.
3. Push [PRIO 3(PTT-M)] to start the watch.
   • The transceiver checks the memory or call channel every 5 sec.
   • The watch resumes according to the selected scan resume condition. (p. 109)
   • To resume the watch manually when paused, push [PRIO 3(PTT-M)].
4. To stop the watch, push [CLR A(MW)].

VFO scan watch via the microphone

1. Select the VFO mode; then, set the desired frequency.
2. Set the watched channel(s).

For memory channel watch:
Push [MR/CALL] then [▲] or [▼] to select the desired memory channel.

For memory scan watch:
❖ Select the memory mode, or desired bank group.
❖ Push [SCAN 2(T-SCAN)] to enter the scan type selection.
❖ Push [▲] or [▼] to select the desired scan type, then push [SCAN 2(T-SCAN)] to start the memory scan.

For call channel watch:
Push [MR/CALL] for 1 sec. then push [▲] or [▼] to select the call channel.
3. Push [PRIO 3(PTT-M)] to start the watch.
   • The transceiver checks the memory or call channel every 5 sec.
   • The watch resumes according to the selected scan resume condition. (p. 109)
   • To resume the watch manually when paused, push [PRIO 3(PTT-M)].
4. Push [SCAN 2(T-SCAN)] to enter scan type selection.
5. Push [▲] or [▼] to select the desired scan type from “ALL,” “BAND” “P-LINK x (x= 0–9)” and “PROGxx (xx= 0–24),” “DUP.”

Continues to the next page
VFO scan watch via the microphone (Continued)

6 Push [SCAN 2(T-SCAN)] to start the VFO scan watch.
   • The transceiver checks the memory/bank channel(s)
     or call channel every 5 sec.
   • The watch resumes according to the selected scan
     resume condition. (p. 109)
7 To stop the watch, push [CLR A(MW)].

DR mode/VFO watch
1 Select the VFO mode; then, set an operating frequency.
2 Push [DR] to enter the DR mode.
3 Select the access repeater to be watched.
   For a specific repeater watch:
   Select the desired access repeater.
   For repeater scan watch:
   Push and hold [SCAN](VFO/MHz) for 1 sec. to start the
   access repeater scan.
4 Enter “PRIO” in SCAN set mode.
   MENU ↩ SCAN ↩ PRIO (p. 123)
   (Push [MENU]), (rotate [DIAL], then push [(MONI)].)
5 Rotate [DIAL] to select “ON.”
   • Select “BELL” if the priority beep function is desired.

6 Push [MENU] to exit SCAN set mode and start the
   watch.
   • “PRIO” indicator appears.
   • The transceiver checks the VFO mode every 5 sec.
   • The watch resume according to the selected scan resume con-
     dition. (p. 109)
7 Push [VFO/MHz] to cancel the watch.

• During priority watch

Monitors DR mode for 5 sec.
Pauses on a VFO mode when a signal is received.

• During priority watch with priority beep

Emits beep and blinks “(••)” indicator when a signal is
received on a VFO mode.
### General

MENU screen is used for programming infrequently changed values or conditions of functions.

- **Entering MENU screen and operation**

  [EXAMPLE]: Set “KEY B” (Key-touch beep) to OFF.

   - One of “TS,” “DUP.T,” “SCAN,” “SET,” “DV SET,” “CALL-S,” “RX CAL,” “MESSAG,” “RPT-L” or “GPS” appears.
2. Rotate [DIAL] to select “SET,” then push [MONI].*
   - Push [CS] to select the previous indication.
3. Rotate [DIAL] to select “SOUNDS,” then push [MONI].*
   - Push [CS] to select the previous indication.
4. Rotate [DIAL] to select “KEY B,” then push [MONI].*
   - Push [CS] to select the previous indication.
5. Rotate [DIAL] to select “OFF,” then push [MONI].*
6. Push [MENU] to return to the indication before entering MENU screen.

* [MONI] ↔ [BAND] or [LOW]

Entering MENU screen via the microphone

The microphone can also be used to set the MENU screen settings.

1. Push [SET B(D-OFF)] to enter MENU screen.
   - One of “TS,” “DUP.T,” “SCAN,” “SET,” “DV SET,” “CALL-S,” “RX CAL,” “MESSAG,” “RPT-L” or “GPS” appears.
2. Push [▲] or [▼] to select “SET,” then push [SET B(D-OFF)].
   - Push [ENT C(T-OFF)] to select the previous indication.

3. Push [▲] or [▼] to select “SOUNDS,” then push [SET B(D-OFF)].
   - Push [ENT C(T-OFF)] to select the previous indication.
4. Push [▲] or [▼] to select “KEY B,” then push [ENT C(T-OFF)].
   - Push [ENT C(T-OFF)] to select the previous indication.
5. Push [▲] or [▼] to select “OFF,” then push [ENT C(T-OFF)].
6. Push [CLR A(MW)] to return to the indication before entering MENU screen.

DUP.T mode items

- **Frequency offset**
  Sets the frequency offset for duplex (repeater) operation within a 0 to 159.995 MHz range.

  ![Image of frequency offset](attachment:image)

  During 1 MHz step setting

  Push [VFO/MHz] each time to selecting the 10 MHz, 1 MHz step and the setting with the tuning step, selected in the VFO mode, in sequence.
  - The default value may differ according to the selected frequency band (before accessing DUP.T mode) and transceiver version.

  The selected tuning step in the VFO mode is used when setting the frequency offset.

- **Repeater tone frequency**
  Selects subaudible tone frequency for accessing a repeater, etc. 50 tone frequencies (67.0–254.1 Hz) are available.
  (default: 88.5)

  ![Image of repeater tone frequency](attachment:image)

- **TSQL frequency**
  Selects tone frequency for tone squelch or pocket beep operation from one of 50 available frequencies (67.0–254.1 Hz).
  (default: 88.5)

  ![Image of TSQL frequency](attachment:image)

  The transceiver has 50 tone frequencies and consequently their spacing is narrow compared with units having 38 tones. Therefore, some tone frequencies may receive interference from adjacent tone frequencies.
10 MENU SCREEN OPERATION

◊ DTCS code
Selects DTCS (both encoder/decoder) code for DTCS squelch operation. Total of 104 codes (023–754) are available. (default: 023)

• Available DTCS codes

| Code | 023 | 025 | 026 | 031 | 032 | 036 | 043 | 047 | 051 | 053 | 125 | 131 | 132 | 134 | 143 | 145 | 146 | 152 | 155 | 156 | 158 | 162 | 165 | 172 | 245 | 251 | 252 | 255 | 261 | 263 | 265 | 271 |
|------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|

◊ Digital code
Sets the desired digital code for digital code squelch operation. Total of 100 codes (00–99) are available. (default: 00)

◊ DTMF speed
Select the desired DTMF transmission speed from 100 msec, 200 msec, 300 msec, 500 msec.
• 100 : 100 msec. interval; 5.0 characters per second (default)
• 200 : 200 msec. interval; 2.5 characters per second
• 300 : 300 msec. interval; 1.6 characters per second
• 500 : 500 msec. interval; 1.0 character per second
SCAN mode items

◊ Priority watch

Activates priority watch or priority watch with alert (Bell).

- OFF: The priority watch is turned OFF. (default)
- ON: The transceiver checks the memory channel frequency every 5 sec.
- BELL: The transceiver checks the memory channel frequency every 5 sec. You can be alerted with beeps and blinking “(••)’."

◊ Scan pause timer

Selects the scan pause time. When receiving signals, the scan pauses according to the scan pause time.

- 2–20SEC: Scan pauses for 2–20 sec. on a received signal in 2 sec. steps. (default: 10 sec.)
- HOLD: Scan pauses on a received signal until it disappears.

◊ Scan resume timer

Selects the scan resume time from a pause after the received signal disappears.

- 0SEC: Scan resumes when a received signal disappears.
- 1–5SEC: Scan pauses 1–5 sec. after a received signal disappears. (default: 2 sec.)
- HOLD: Scan remains paused on the received signal according to the scan pause timer even if it disappears. Rotate [DIAL] to resume manually.

◊ Program skip scan

Sets programmed skip scan function ON (default) and OFF for VFO scan (full scan, programmed scan, etc.) operation.
10 MENU SCREEN OPERATION

◇ Memory bank link function

Sets the memory bank link function ON or OFF (default). The link function provides continuous bank scan, scanning all contents in the selected banks during bank scan.

• Bank link setting

1. Rotate [DIAL] to select the bank that you want to change.

2. Push [◄](MONI) to enter bank setting.
3. Rotate [DIAL] to select the setting.

4. Push [◄](MONI) to set and return to the BANK selection screen.
5. Rotate [DIAL] to select next bank and repeat steps 2 to 4, or push [MENU ➥] to exit MENU screen operation.

◇ Program scan link function

Sets the program scan link function. The link function provides continuous program scan in the selected program scan number during program scan. Default setting for P-LINK P0 to P-LINK P9: PROG 0 to PROG 24 are linked.

• Confirming program scan link

1. Rotate [DIAL] to select the program scan link number that you want to confirm.

2. Push [◄](MONI) to enter program scan link setting.
3. Rotate [DIAL] to select “LINK.”

4. Push [◄](MONI), then rotate [DIAL] to confirm the linked program scan.
5. Push [◄](MONI) to exit.
• **Program scan link name programming**

1. Rotate [DIAL] to select the program scan link number for which you want to program a name.

   ![P-LINK PO](image)

2. Push [↩](MONI) to enter program scan link setting.
3. Rotate [DIAL] to select “NAME.”
4. Push [↩](MONI) to enter the name programming state.

   ![NAME PO](image)

5. Rotate [DIAL] to select the desired character, number, symbol or space; push [↑](LOW) or [↓](CS) to move the cursor right or left, respectively.
6. Push [↩](MONI) to program the repeater name and exit the state.
7. Push [MENU](MENU) to exit MENU screen operation.

• **Program scan link setting (ADD)**

1. Rotate [DIAL] to select the program scan link number that you want to add.

   ![P-LINK PO](image)

2. Push [↩](MONI) to enter program scan link setting.
3. Rotate [DIAL] to select “ADD.”

   ![ADD PO](image)

4. Push [↩](MONI) then rotate [DIAL] to select the desired programmed scan number to be linked.

   ![PROG](image)

   - Only programmed scan numbers that have not linked in the selected program link number are displayed.
   - Push [↓](CS) to cancel the selection.
   - Push [↩](MONI) to add the selected programmed scan.
   - Return to the previous indication as step 3.
5. Repeat steps 3 to 5 to continue the program scan link setting or push [MENU](MENU) to exit MENU screen operation.
10 MENU SCREEN OPERATION

• Program scan link setting (CLEAR)

1. Rotate [DIAL] to select the program scan link number that you want to delete.

2. Push [MONI] to enter program scan link setting.
3. Rotate [DIAL] to select “CLEAR.”

4. Push [MONI] then rotate [DIAL] to select the desired programmed scan number to be deleted from the link.

• Only programmed scan numbers that have linked in the selected program link number are displayed.
• Push [CS] to cancel the selection.
5. Push [MONI] to delete the setting.
• Return to the previous indication as step 3.
6. Repeat steps 3 to 5 to continue the program scan link setting or push [MENU] to exit MENU screen operation.
SET mode — FUNC items

◊ Squelch delay timer

Selects squelch delay from short and long to prevent repeated opening and closing of the squelch during reception of the same signal.
- SHORT : Short squelch delay. (default)
- LONG : Long squelch delay

◊ Attenuator

Turns the attenuator (squelch attenuator) function ON or OFF.
- ON : The attenuator (squelch attenuator) activates when [SQL] control is set between 13 o’clock and fully clockwise position. (default)
- OFF : The attenuator (squelch attenuator) does not function.

◊ Mic sens level

Selects the microphone sensitivity from HIGH and LOW to suit your preference.
- HIGH : The attenuator (squelch attenuator) activates when [SQL] control is set between 13 o’clock and fully clockwise position. (default)
- LOW : The attenuator (squelch attenuator) does not function.

◊ ALC

Sets the ALC (Automatic Level Control) function ON or OFF (default).
The ALC function reduces the microphone gain automatically when the transmission audio is distorted. This function is available in the FM/FM-N mode only.

◊ PTT lock

Turns the PTT lock function ON or OFF.
Transmission with [PTT] is inhibited when ON is selected to prevent accidental transmission, etc. (default: OFF)
10 MENU SCREEN OPERATION

◊ Busy lockout
Turns the busy lockout function ON or OFF. This function inhibits transmission while receiving a signal or when the squelch is open. (default: OFF)

◊ Time-out timer
To prevent accidental prolonged transmission, etc., the transceiver has a time-out timer. This function cuts transmission OFF after 1, 3, 5, 10, 15 or 30 min. of continuous transmission. This timer can be cancelled.
  • OFF : The time-out timer is turned OFF. (default)
  • 1 to 30 MIN : The transmission is cut OFF after the set period elapses.

◊ Fan control
Selects the cooling fan control condition from AUTO, FAST, MID and SLOW.
  • SLOW : The fan continuously rotates at low speed.
  • MID : The fan continuously rotates at medium speed.
  • FAST : The fan continuously rotates at fast speed.
  • AUTO : The fan rotates during transmit and for 30 sec. after transmission, or when the internal temperature of the transceiver exceeds the preset value until the temperature drops. (default)

◊ Active band
Allows continuous frequency selection of the operating frequency across all bands.
  • SINGLE : A single operating frequency can be selected within the current band. Push [BAND] for band selection in this case.
  • ALL : The operating frequency can be selected continuously. (default)
◊ Mic UP/DN

Sets the assigning function to the [UP]/[DN] keys on the optional HM-103/HM-154.

Assignable functions:

<table>
<thead>
<tr>
<th>Function</th>
<th>Assignment</th>
</tr>
</thead>
<tbody>
<tr>
<td>UP* (default)</td>
<td>DOWN† (default)</td>
</tr>
<tr>
<td>MENU (as [MENU])</td>
<td>DR (as [DR])</td>

<tr>
<td>M/CALL (as [M/CALL])</td>
<td></td>
</tr>
</tbody>
</table>

*Available for “MIC-UP” only; †Available for “MIC-DN” only

◊ Packet speed

Selects the data transmission speed for packet operation from 1200 bps (default) and 9600 bps.

◊ Data speed

Selects the data speed of [DATA] jack between 1200 bps and 9600 bps (default) for low-speed data communication in the DV mode or GPS receiving.

This setting does not change the cloning speed.

◊ Auto power OFF

The transceiver can automatically turn itself OFF after a specified time period. Activating any control restarts the time-out period. The transceiver beeps before it turns OFF.

30 min., 60 min, 90 min, 120 min and OFF (default) can be specified. The specified time period is retained even when the transceiver is turned OFF by the auto power OFF function. To cancel the function, select “OFF” in this item.
10 MENU SCREEN OPERATION

■ SET mode — DISP items

◇ Display dimmer

Sets backlighting brightness.
The levels 1 (dark) to 4 (bright: default) are available.

◇ Auto dimmer

Sets backlighting brightness when no operation is performed for approx. 5 sec.

- OFF : The backlight brightness will not be changed. (default)
- AT–OFF : The backlight will be turned OFF when no operation is performed for approx. 5 sec.
- AT–D1 to D3 : Brightness level 1 to 3 is selected when no operation is performed for approx. 5 sec.

◇ Display color

The display color can be set to amber, yellow or green (default).

◇ LCD contrast

The contrast of the LCD can be selected from 9 levels.

- 1 (Low contrast) to 9 (High contrast) (default: 4)
◊ **Name indication type**

Selects name indication type from MEMORY, BANK and OFF during memory mode operation.

- **OFF** : The programmed frequency is displayed.
- **MEMORY** : The programmed memory name is displayed. However, the programmed frequency is displayed if no memory name is programmed. (default)
- **BANK** : The bank name, that the selected memory channel is assigned to, is displayed. However, the programmed frequency is displayed if no bank name is programmed.

◊ **Scan name**

The programmed scan, programmed link scan or bank name is displayed during the scan type selection.

- **OFF** : The programmed scan number, programmed link scan number or bank initial is displayed during selection.
- **ON** : The programmed scan, programmed link scan or bank name is displayed. However, the programmed scan number, programmed link scan number or the default bank initial is displayed if no name is programmed. (default)

◊ **Opening message**

The opening message indication that is displayed at power ON is selectable from “ICOM” logo, my call sign or skipped.

- **OFF** : Opening message indication is skipped.
- **LOGO** : “ICOM” is displayed at power ON. (default)
- **CALL** : The set my call sign is displayed at power ON.
10 MENU SCREEN OPERATION

■ Set mode — SOUNDs items

◊ Noise filter
- Appears only when the FM/N or AM/N mode is selected.
The noise filter selects audio signal filter width to reduce high-pitch noise in analog mode (FM/N, AM/N) operation— clear voice audio reception is provided. Selects the noise filter from AUTO, F1–F3.
  • AUTO : Selects the suitable audio filter width according to the received signal strength. When a weak signal is received, selects a narrow audio filter width to reduce noise audio. (default)
  • F1 : The widest audio filter width.
  • F2 : Middle audio filter width.
  • F3 : The narrowest audio filter width.

◊ Audio filter
- Appears only when AM/N mode is selected.
The AF filter suppresses high-pitch tone during AM mode operation.
  • OFF : The AF filter is deactivate. (default)
  • ON : The AF filter is activate.

◊ Beep output level
Adjusts the key-touch beep tone level to the desired level within 9 levels. (default: 7)

The key-touch beep (following item) must be set to ON to have a beep tone.
Key-touch beep
Turns the key-touch beep ON or OFF. (default: ON)

Scan stop beep
Turns the scan stop beep function ON or OFF. (default: OFF)

Standby beep
Turns the beep emission capability ON or OFF when the communicating station finishes transmitting or the receive signal disappears during DV mode operation. (default: ON)

Band edge beep
Turns the beep emission capability ON or OFF when the frequency is changed over the band edge. (default: OFF)
DV SET mode items

◊ Auto reply

Use this function to reply a station calling when you are away from the transceiver.
After a manual transmission (pushing [PTT]), the Auto Reply setting returns to OFF automatically.

- OFF : No reply is performed even if a call is received. (default)
- ON  : Sets the caller’s call sign and replies to the call with the programmed own call sign.

◊ DV data TX

During low-speed data operation, auto data transmission function is available. This function activates to transmit automatically when the PC software sends data to the ID-E880 via the [DATA] jack.

- PTT : Data from [DATA] transmits when [PTT] is pushed. (default)
- AUTO : Data from [DATA] transmits automatically.

◊ Digital monitor

Selects the desired monitoring mode during DV mode operation between “Auto,” “Digital” and “Analog.”

- AUTO : The transceiver sets monitoring mode to the FM and DV according to the received signal. (default)
- DIGI : Monitors in the DV mode.
- ANALOG : Monitors in the FM mode.

◊ Digital repeater setting

When accessing a D-STAR repeater that has a call sign different than the transceiver’s current call sign, the repeater call sign can be stored into “RPT1” automatically by reading the repeater’s downlink signal. The previously stored repeater’s call sign can be recalled when selecting the repeater call sign.

(default: ON)
RX call sign auto write
When your own individual station call is received, the calling station call sign can be automatically set in “UR” of the current call sign. (default: OFF)

Repeater call sign auto write
When your own individual station call is received via the D-STAR repeater, the repeater call sign can be set into “RPT1” and/or “RPT2” automatically by reading the repeater’s down-link signal. (default: OFF)

DV auto detect
When a signal other than the DV mode is received during DV mode operation, the transceiver can automatically select the FM mode.
- OFF : Operating mode is fixed in DV. (default)
- ON : The transceiver automatically selects the FM mode for temporary operation.

The received audio may be distorted with the auto detection “ON” setting for FM demodulation.

Call sign edit record
Selects call sign programming when the call sign is edited.
- OFF : The edited or corrected call sign overwrites the pre-programmed channel. A different channel cannot be selected.
- SEL : The edited or corrected call sign is programmed into the selected call sign memory.
- AUTO : The edited or corrected call sign is programmed into a blank channel automatically. (default)
10 MENU SCREEN OPERATION

◊ Auto gateway setting

Turn the gateway auto set function ON or OFF for calling a specific station in the DR mode. This function enables the transceiver to set the pre-programmed gateway repeater as the linked repeater “RPT2” automatically.

- OFF : After selecting a specific station, the transceiver sets the same RPT2 as previous time. (default)
- AUTO : After selecting a specific station, the transceiver sets the pre-programmed gateway repeater as RPT2 automatically.

◊ RX call sign display

When a call is received, the calling station call sign can be displayed automatically. (default: AUTO)

◊ TX call sign display

Selects call sign display function from YOUR, MY and OFF. When this setting is set to YOUR or MY, the transceiver automatically displayed the set station or your own call sign during DV mode transmission. (default: YOUR)

◊ RX message display

Sets auto received message display function AUTO or OFF. When this setting is set to AUTO, the transceiver automatically displays and scrolls the received message. (default: AUTO)

◊ Scroll speed

Set the displayed message, call sign, etc. scrolling speed.

- SLOW : Scroll speed is set to slow.
- FAST : Scroll speed is set to fast. (default)
◊ **Break-in function**

The break-in function allows you to break into a conversation where the two original stations are communicating with call sign squelch enabled. See pages 68, 69 for details.

- **OFF**: The break-in function is set to OFF. (default)
- **ON**: The break-in function is set to ON.
  - “BK” appears on the display.

**NOTE:** The break-in function is turned OFF automatically when turning transceiver’s power OFF

◊ **EMR function**

The EMR communication mode is available for digital mode operation. In the EMR communication mode, no call sign setting is necessary. When an EMR communication mode signal is received, the audio (voice) will be heard at the specified level even if the volume setting level is set to minimum level, or digital call sign/digital code squelch is in use. See page 67 for details.

- **OFF**: The EMR function is set to OFF. (default)
- **ON**: The EMR function is set to ON.
  - “EMR” appears on the display.

**NOTE:** The EMR communication function is turned OFF automatically when turning transceiver’s power OFF
## GPS mode items

### GPS set

The following individual settings are available in GPS set. Set them to suit your GPS operation.

- **Position format**
  Selects the displaying position format from “mm.mm” (default) and “mm.SS.”

<table>
<thead>
<tr>
<th>mm.m</th>
<th>m.m</th>
<th>FOM</th>
<th>FOM</th>
</tr>
</thead>
</table>

- **Units**
  Selects display units for distance and elevation to “m” or “Ft/ml.” (default: m)

<table>
<thead>
<tr>
<th>m</th>
<th>Ft/ml</th>
<th>UNI</th>
<th>UNI</th>
</tr>
</thead>
</table>

- **UTC offset**
  Sets time difference from UTC (Universal Time Coordinated) from –12:00 to +12:00 range in 5 min. steps. (default: 0:00)

<table>
<thead>
<tr>
<th>0:00 UTC</th>
<th>+ 9:00 UTC</th>
</tr>
</thead>
</table>

### GPS indication

Sets the GPS indicator ON or OFF. (default: ON)

- OFF : “GPS” indicator does not appear.
- ON : “GPS” indicator appears on the display when a GPS receiver is connected and a valid position data is received; blinks when an invalid data is received.

### GPS TX mode items

Sets the transmission of data from a connected GPS receiver ON or OFF.

When the position information is received from a connected GPS receiver and “GPS.ATX” (GPS Auto TX Timer) setting (p. 141) is set to a specific time, the transceiver automatically transmits the current position and message at the set interval.

- OFF : Transmitting position data is disabled. (default)
- DVG : Transmitting position data in GPS mode.
- DVA : Transmitting position data in GPS-A mode.
Sentence formatter setting

1. Select “DVG” in GPS transmission item, then push \[\text{[\leftarrow]}\] (MONI) to enter the sentence formatter selection.
2. Rotate [DIAL] to select the desired sentence formatter.
   - RMC, GGA, GLL, GSA, VTG and GSV are selectable.

3. Push \[\text{[\leftarrow]}\] (MONI) to enter the desired sentence formatter selection.
4. Rotate [DIAL] to select ON/OFF.

Default setting for sentence formatter

<table>
<thead>
<tr>
<th>Sentence formatter</th>
<th>Default</th>
<th>Sentence formatter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>RMC</td>
<td>OFF</td>
<td>GSA</td>
<td>OFF</td>
</tr>
<tr>
<td>GGA</td>
<td>ON</td>
<td>VTG</td>
<td>OFF</td>
</tr>
<tr>
<td>GLL</td>
<td>OFF</td>
<td>GSV</td>
<td>OFF</td>
</tr>
</tbody>
</table>

5. Push \[\text{[\leftarrow]}\] (MONI) to store the selection.
6. Rotate [DIAL] to select next sentence and repeat steps 2 to 5, or push \[\text{[MENU]}\] to return to frequency indication.
   - No more than four sentence formatters can be activate simultaneously.

GPS-A set mode

Enter GPS-A set mode by selecting “DVA” in GPS TX mode, then push \[\text{[\leftarrow]}\] (MONI). This set mode is available to set unproto address, data extension, time stamp, GPS-A symbol and comment.

- Unproto address

56 characters address can be entered for unproto address.

1. Rotate [DIAL] to select “UNPROT” then push \[\text{[\leftarrow]}\] (MONI) to enter the unproto address edit mode.
2. Rotate [DIAL] to select the desired character.
   - “API880,DSTAR∗” is preset as the default.
   - The first character blinks.
   - Push \[\text{[\uparrow]}\] (LOW) to move the cursor right; push \[\text{[\downarrow]}\] (CS) to move the cursor left.
   - Push [CLR] (DR) to erase the selected character, or push and hold [CLR] (DR) for 1 sec. to erase all characters following the cursor.

3. Repeat step 2 until the desired unproto address is programmed.
4. Push \[\text{[\leftarrow]}\] (MONI) to program the unproto address and return to the unproto address edit mode.
5. Push \[\text{[\leftarrow]}\] (CS) to return to GPS-A set mode item indication.
10 MENU SCREEN OPERATION

- **DATA extension**
  Sets the data extension capability to “CUR.SPD” or OFF (default).
  The transceiver’s course and speed information is additionally transmitted with position data when “CUR.SPD” is selected.

- **NOTE:** When “CUR.SPD” is selected, number of character for “COMMENT” is limited to 36.

- **Time stamp**
  Selects transmitting time stamp type from DHM, HMS and OFF. This function transmits UTC (Universal Time Coordinated) time only.
  - **OFF**: No time stamp is transmitted. (default)
  - **DHM**: Time stamp in the format of Day, Hour and Minute is transmitted.
  - **HMS**: Time stamp in the format of Hour, Minute and Second is transmitted.

- **GPS-A symbol**
  Selects the desired GPS-A symbol.
  Available symbols: AMBU (Ambulance), BUS (Bus), FIRE (Fire Truck), BICYCL (Bicycle), YACHT (Yacht), HELI (Helicopter), AIRCRA (Small Aircraft), SHIP (Power Boat), CAR (Car: default), MCYCLE (Motorcycle), BALLOO (Balloon), JEEP (Jeep), RV (Recreational Vehicle), TRUCK (Truck), VAN (Van) and OTHER (Other).

If “OTHER” is selected, set the desired symbol code as follows:

1. Push [MONI] (MONI) to begin programming.
   - 1st character blinks.
   - “-“ blinks at the 1st character and “-“ appears at the 2nd character if no symbol is programmed previously.

2. Rotate [DIAL] to select the 1st character from “\” and “/.”
3. Push [LOW] (LOW) to select the 2nd digit.
4. Rotate [DIAL] to select the 2nd digit character.
   - A–Z (capital letters), 0–9, !, #, $, %, &, (, ), *, +, -, _, /, :, <, =, >, ?, @, [, \, ]^ and space are available for 2nd character.
Push \([\downarrow](\text{MONI})\) to program the symbol code, then exit programming.

Push \([\uparrow](\text{CS})\) to return to GPS-A set mode screen.

When “OTHER” is selected, check the symbol codes of APRS® and set it correctly.

**Comment**

Program up to a 43-character* comment. The programmed comment is transmitted with the GPS position data.

*Only 36 character are available when “CUR.SPD” (COURSE/SPEED) is selected in DT EXT (data extension).

1. Push \([\downarrow](\text{MONI})\) to enter programming.
2. Rotate [DIAL] to select the desired character.
   - The selected character blinks.
   - Push \([\downarrow]\)(LOW) to move the cursor right; push \([\uparrow](\text{CS})\) to move the cursor left.
   - Push \([\text{CLR}](\text{DR})\) to erase the selected character, or push and hold \([\text{CLR}](\text{DR})\) for 1 sec. to erase the characters following the cursor.
3. Repeat step 2 until the desired comment is programmed.

4. Push \([\downarrow](\text{MONI})\) to program the comment and exit comment programming.
5. Push \([\uparrow](\text{CS})\) to return to GPS-A set mode screen.

**GPS auto transmission**

Selects the desired interval for automatic position transmission function from OFF (default), 5, 10, 30 second, 1, 3, 5, 10 and 30 minutes.

![GPS auto transmission options]

**NOTE:** When four sentence formatters are activated at the same time (“Sentence formatter setting” on page 139), “5SEC” cannot be selected.
Programming a DTMF tone sequence

DTMF tone sequences are used for autopatching, accessing repeaters, controlling other equipment, etc. The transceiver has 16 DTMF memory channels (d0–d9, dA, dB, dC, dD, dE, dF) for storage of often-used DTMF tone sequences of up to 24 digits.

1. Push and hold [DTMF](MONI) for 1 sec. to enter the DTMF set screen.
2. Rotate [DIAL] to select “DTMF-M,” then push [ ]] (MONI).
3. Rotate [DIAL] to select the desired memory channel, then push [ ]] (MONI).
   - Previously programmed DTMF code is displayed if programmed.

4. Rotate [DIAL] to select the desired code.
5. Push [ ](LOW) to select the next digit.
   - Pushing [ ](CS) moves the cursor backward.
6. Repeat steps 4 and 5 until the desired DTMF tone sequence is input, then push [ ]] (MONI).
   - Up to 24 digit can be programmed.
7. Push [ ]] (MONI) to program the DTMF tone sequence and exit the programming mode.

[EXAMPLE]: Programming “5428AB453” into DTMF memory channel “d4.”

Push and hold [DTMF] for 1 sec. 

Enter DTMF memory.

Rotate [DIAL] to select “DTMF-M,” then push [ ]. 

Repeat the previous step until the desired tone sequence is entered.
Transmitting a DTMF tone sequence

Automatic transmission (DTMF memory)

1. Push and hold [DTMF](MONI) for 1 sec. to enter the DTMF set screen.
2. Rotate [DIAL] to select “DTMF-M,” then push [⏪](MONI) to enter DTMF memory screen.
3. Rotate [DIAL] to select the desired DTMF memory channel to be transmitted then push [⏪](CS).
   • Returns to the DTMF set screen.
4. Rotate [DIAL] to select “DTMFTX,” then push [⏪](MONI).
5. Rotate [DIAL] to select “ON,” then push [⏪](MONI).
   • “COD” appears in place of 100 MHz digit.
7. Push [PTT] to transmit the selected DTMF memory content.
8. To cancel the DTMF tone sequence automatic transmission, select “OFF” in step 5.
   • When the DTMF encoder is turned ON continuously, each push of the PTT transmits the previously selected DTMF tone sequence.

1. Push [FUNC] then [Low 6(DTMF)] to turn the DTMF memory encoder ON.
   • “COD” appears in place of 100 MHz digit.
2. Push [PTT] to transmit the previously selected DTMF memory.
3. Push [FUNC] then [SET B(D-OFF)] to cancel the DTMF memory encoder.
   • When the DTMF encoder is turned ON continuously, each push of the PTT transmits the previously selected DTMF tone sequence.
DTMF MEMORY ENCODER

Transmitting a DTMF memory directly

1. Push [FUNC] then [Low 6(DTMF)] to turn the DTMF memory encoder ON.
   • “#” appears in place of 100 MHz digit.
2. Push [DTMF-S] to turn the DTMF memory direct selection ON.
   • The function indicator (microphone) lights green.
3. Push the desired DTMF channel.
   • “0” to “9,” “A” to “D,” “*” and “#” are available for DTMF memory channels.
   • The selected DTMF tone sequence is automatically transmitted without pushing PTT.

   NOTE: When no DTMF tone sequence programmed channel number is pushed, it transmits the relative DTMF tone sequence as the manual transmission described as at right.

5. Push [FUNC] then [SET B(D-OFF)] to cancel the DTMF memory encoder.

Manual transmission

1. Deactivate the DTMF memory encoder by pushing [FUNC] then [SET B(D-OFF)].
2. Push [DTMF-S] to turn the DTMF direct selection ON.
   • The function indicator (microphone) lights green.
3. Push one of “0” to “9” and “A” to “F” keys momentarily, then push the desired DTMF keys, 0–9 and A to F.
   • A: [CLR A(MW)] B: [SET B(D-OFF)], C: [ENT C(T-OFF)] D: [SQL Y(D(MUTE))], E: [VOL (TONE-1)] F: [SQL (16KEY-L)]
   • Automatically transmits without pushing PTT.
   • The first code entering may not be transmitted due to start transmitting takes 400 msec. Thus the DTMF code transmission starts from the 2nd code.
DTMF speed

The rate at which DTMF values in memory send individual DTMF characters can be set to accommodate operating needs.

Enter “DTMF-S” in DUP.T menu.

1. Push [MENU], (rotate [DIAL], then push [MONI]).

2. Rotate [DIAL] to select and set the desired speed as shown in the table below, then push [MONI].

3. Push [MENU] again to exit DUP.T menu and return to the frequency screen.

<table>
<thead>
<tr>
<th>DISPLAY</th>
<th>INTERVAL</th>

<td>300 msec.</td>
<td>1.6 cps</td>
</tr>
<tr>
<td>500</td>
<td>500 msec.</td>
<td>1.0 cps</td>
</tr>
</tbody>
</table>

cps=characters/sec

Clearing a DTMF memory

An unwanted DTMF memory can be cleared (erased).

1. Push and hold [DTMF](MONI) for 1 sec. to enter the DTMF set screen.
2. Rotate [DIAL] to select “DTMF-M,” then push [MONI].
3. Rotate [DIAL] to select the desired DTMF memory channel to be cleared, then push [MONI].
4. Rotate [DIAL] to select “--,” then push [MONI] to clear the selected DTMF memory channel.

When entering DTMF programming mode.

5. Push [MENU] to exit the DTMF set screen.
1 Set the desired operating frequency and the desired operating mode.
2 Set the desired CTCSS tone or DTCS code. See pages 147–149.
3 Push and hold [TONE] (M/CALL) for 1 sec. to enter the tone selection state.
4 Rotate [DIAL] to select the desired squelch system, then push [TONE] (M/CALL) again.
   • “T SQL”: Tone squelch with pocket beep, “T SQL”: Tone squelch, “T(D)”DTCS”: DTCS squelch with pocket beep, “DTCS”: DTCS squelch

5 When a signal with the correct tone or code is received, the transceiver’s mute is released and received audio sounds.
   • Emits beep tones for 30 sec. and blinks “T SQL” if pocket beep is selected in step 4.
6 Push [PTT] to answer or push [CS] to stop the beeps and blinking.

NOTE:
- The tone/DTCS code squelch opens sometimes when other stations communicate using an adjacent tone frequency or in a DTCS code.
- The tone/DTCS code squelch can be operated on the FM or FM-N mode only.
diamond Reverse tone/DTCS squelch

The reverse tone/DTCS squelch is convenient if you want to ignore a specific signal.

1. Set the desired operating frequency and the desired operating mode.
2. Set the desired CTCSS tone or DTCS code.
3. Push and hold [TONE](M/CALL) for 1 sec. to enter the tone selection state, then push [TONE](M/CALL) again.
4. Rotate [DIAL] to select the desired squelch system.
5. When a signal with unmatched tone or code is received, the transceiver’s mute is released and the received audio sounds.
   The transceiver mutes the squelch when a signal with the matched tone or code is received.

diamond Setting tone squelch frequency

1. Enter “C TONE” in the DUP.T menu.

   MENU ⋆ DUPT ⋆ C TONE (p. 121)
   (Push [MENU])
   (Push [MENU])
   (Push [MENU])

2. Rotate [DIAL] to select and set the desired CTCSS tone frequency, then push [MONI].
   - Each operating band and each memory channel have independent settings.
   - See the table on page 148 for available tone frequencies.
12 TONE SQUELCH AND POCKET BEEP

◊ Setting DTCS code

1. Enter “CODE” (DTCS code) in the DUP.T menu.

MENU ☰ DUP.T ☰ CODE (p. 122)
(Push [MENU], (rotate [DIAL], then push [➡](MONI).)

[ MENU ]
[DIAL] [➡]

[CODE]

2. Rotate [DIAL] to select and set the desired DTCS code, then push [➡](MONI).
   - Each operating band and each memory channel have independent settings.
   - See the table at right for available DTCS codes.

DTCS phase can be selected in “DTCS-P” (DTCS polarity) item. (p. 122)

• Available tone frequencies

</table>
■ DTCS polarity setting

① Enter “DTCS-P” (DTCS polarity) in the DUP.T menu.

MENU ↔ DUP.T ↔ DTCS-P (p. 122)
(Push [MENU], (rotate [DIAL], then push [MONI]).)

② Rotate [DIAL] to select and set the desired DTCS polarity, then push [MONI].

- BOTH N : Normal phase is used for both TX and RX. (Default)
- TN-RR : Normal phase is used for TX; Reverse phase for RX.
- TR-RN : Reverse phase is used for TX; Normal phase for RX.
- BOTH R : Reverse phase is used for both TX and RX.

③ Push [MENU] to exit the DUP.T menu.

1 Enter “DTCS-P” (DTCS polarity) in DUP.T menu.

MENU ↔ DUP.T ↔ DTCS-P (p. 122)
(Push [SET B(D-OFF)] to enter MENU screen),
(Push [▲] or [▼], then push [SET B(D-OFF)].)

2 Push [▲] or [▼] to select the desired polarity, then push [SET B(D-OFF)].

3 Push [CLR A(MW)] to exit the DUP.T menu screen.
12 TONE SQUELCH AND POCKET BEEP

Tone scan

By monitoring a signal that is being operated with pocket beep, tone or DTCS squelch function, you can determine the tone frequency or DTCS code necessary to open the squelch.

1. Set the desired operating frequency and the desired operating mode.
2. Push and hold [TONE](M/CALL) for 1 sec. to enter the tone selection state.
3. Rotate [DIAL] to select either “TONE,” “TSQL” or “DTCS” to be scanned, then push [TONE](M/CALL) again.
4. Push and hold [SCAN](VFO/MHz) to enter scan selection state.
   • To change the scanning direction, rotate [DIAL].
5. Rotate [DIAL] to select “TONE,” then push [SCAN](VFO/MHz) again to start the tone scan.

   ![Diagram of Tone Scan]

   During repeater tone scan
   During CTCSS frequency scan
   During DTCS code scan

6. When the CTCSS tone frequency or 3-digit DTCS code is matched, the squelch opens and the tone frequency is temporarily programmed into the selected feature, such as memory or call channel.
   • The tone scan pauses when a CTCSS tone frequency or 3-digit DTCS code is detected.
   • The decoded CTCSS tone frequency or 3-digit DTCS code is used for the tone encoder or tone encoder/decoder, depending on the selected tone condition or type in step 3.
     - “TONE” : Tone encoder for repeater operation
     - “TSQL” : CTCSS tone encoder/decoder
     - “DTCS” : DTCS tone encoder/decoder
7. Push [SCAN](VFO/MHz) to stop the scan.

1. Set the frequency or memory channel to be checked for a tone frequency.
2. Selects the tone type to be scanned.
   • Push [FUNC] then push; [SIMP 9(TSQL)] for tone squelch; [HIGH 4(DTCS)] for DTCS squelch.
3. Push [FUNC] then [SCAN 2(T-SCAN)] to start the tone scan.
4. When the tone frequency is matched, the squelch opens and the tone frequency is programmed into the selected mode, such as memory or call channel.
5. Push [CLR A(MW)] to stop the scan.

NOTE: The decoded tone frequency is programmed temporarily when a memory or call channel is selected. However, this will be cleared when the memory/call channel is re-selected.
Digital squelch

**NOTE:** Use digital code squelch when operating with two or more stations, because the digital call sign squelch function recognizes “MY” (your own call sign). Thus the digital call sign squelch function can be used when operating with only one station.

1. Set the desired operating frequency in the DV mode.
2. Set the current call signs, “MY” (your own call sign) and “UR” (other station call sign) and/or Digital code. See next page.
3. Push and hold [TONE](M/CALL) for 1 sec. to enter the tone selection state.
4. Rotate [DIAL] to activate the digital code or digital call sign squelch, then push [TONE](M/CALL) again.

5. When the received signal includes a matching call sign/code, the squelch opens and the signal can be heard.
   - When the received signal’s call sign/code does not match, digital call sign/digital code squelch does not open; however, the S-indicator shows signal strength.
   - Emits beep tones for 30 sec. and blinks “(···)” if pocket beep is selected in step 4.

![Digital call sign pocket beep](image1)
![Digital code pocket beep](image2)

![Digital call sign squelch](image3)
![Digital code squelch](image4)
12 TONE SQUELCH AND POCKET BEEP

◇ UR and MY call signs setting

1. Enter “UR” in call sign screen.

MENU ⊗ CALL-S ⊗ UR
(Push [MENU], (rotate [DIAL], then push [MONI]).)

2. Rotate [DIAL] to select the desired call sign.
   - Input the call sign if the desired call sign has not stored in the call sign memory. See p. 32 for details.

3. Push [MONI] to set the selected call sign to the current UR call sign.

4. Rotate [DIAL] to select “MY” in call sign screen, then push [MONI].

5. Rotate [DIAL] to select the desired call sign.
   - Input the call sign if the desired call sign has not stored in the call sign memory. See p. 30 for details.

6. Push [MONI] to set the selected call sign to the current MY call sign.

◇ Digital code setting

1. Enter “D CODE” (DTCS CODE) in the DUP.T menu.

MENU ⊗ DUP.T ⊗ D CODE (p. 122)
(Push [MENU], (rotate [DIAL], then push [MONI]).)

2. Rotate [DIAL] to select and set the desired digital code (00–99), then push [MONI].
   - Each operating band and each memory channel have independent settings.

Microphone keys

The supplied HM-133’s [F-1] and [F-2] keys memorize the transceiver conditions. The [UP]/[DN] keys of the standard or an optional microphone (other than the HM-133) can be assigned functions like the function keys on the transceiver’s front panel.

[F-1]/[F-2] keys on the HM-133

The following conditions can be memorized into [F-1] and [F-2] keys, independently.

- Operating frequency, Operating mode selection (FM/FM-N/AM/AM-N/DV), Repeater setting (offset direction and frequency offset, tone ON/OFF and tone frequency), Tuning step, Tone/DTCS squelch (ON/OFF, frequency/code and polarity), Call signs (station and repeater1/2), Call sign/digital code squelch (ON/OFF and digital code)

The set mode settings or transmit output power level can additionally be memorized with [FUNC]+[F-1]/[F-2] key operation, independently.

- SCAN set mode settings (except program scan link settings), FUNC set mode settings (except Mic UP/DN settings), DISP set mode settings, SOUNDS set mode settings, DV SET mode settings (except BK or EMR settings), GPS.SET settings, GPS alarm areas (ALM1, ALM2), Sentence formatter settings, GPS-A set mode settings, Transmit output power level

Programming the band condition

Set the desired contents of each condition, then push and hold [F-1]/[F-2] for 1 sec.
- 3 beeps sound.

Recalling the band condition

Programming the bands condition ([FUNC]+)

After setting the desired contents of each condition, push [FUNC] then push and hold [F-1]/[F-2] for 1 sec.
- 3 beeps sound.

Recalling the bands condition ([FUNC]+)

[UP]/[DN] keys on a microphones

(other than the HM-133)

The following functions are assigned to the [UP]/[DN] keys on the other microphones (HM-103/HM-154) in set mode.

- Default setting

[UP] : channel up; push and hold to start scan, push again to stop scan.
[DN] : channel down; push and hold to start scan, push again to stop scan.

See page 129 for assignable function details.
13 OTHER FUNCTIONS

■ All reset

The function display may occasionally display erroneous information (e.g. when first applying power). This may be caused externally by static electricity or by other factors.

If this problem occurs, turn power OFF. After waiting a few seconds, turn power ON again. If the problem persists, perform the following procedure.
- Partial reset is also available. See right for details.

**IMPORTANT!**:
Resetting the CPU CLEARS all programmed contents to their default settings.

1. Push and hold [C] for 1 sec. to turn power OFF.
2. Push and hold simultaneously [MENU] and [S.MW], then turn power ON to reset the CPU.

■ Partial reset

If you want to initialize the operating conditions (VFO frequency, VFO settings, menu group’s contents) without clearing the memory contents, call sign memories or repeater lists, a partial reset function is available.

1. Push and hold [C] for 1 sec. to turn power OFF.
2. Push and hold simultaneously [S.MW] and [VFO/MHz], then turn power ON to reset the CPU.
**Data cloning**

Diamond **Cloning between transceivers**
The ID-E880 has transceiver-to-transceiver data cloning capability. This function is useful when you want to copy all of the programmed contents from one ID-E880 to another.

- A optional OPC-474 CLONING CABLE is required.

1. Connect the optional OPC-474 cloning cable to the [SP] jack of the master and sub-transceivers.
   - The master transceiver is used to send data to the sub-transceiver.

2. While pushing and holding [M/CALL], turn power ON to enter cloning mode (master transceiver only—power on only for sub-transceiver).
   - “CLONE” appears and the transceivers enter the clone standby condition.

   - “CL OUT” appears in the master transceiver’s display and the bar meter shows that data is being transferred to the sub-transceiver.
   - “CL IN” appears automatically in the sub-transceiver’s display and the bar meter shows that data is being received from the master transceiver.

4. When cloning is finished, turn power OFF, then ON to exit cloning mode.
   - “CL END” appears automatically in the sub-transceiver’s display after the cloning is completed.
13 OTHER FUNCTIONS

◊ Cloning using a personal computer

The CS-80/880 CLONING SOFTWARE (free download) is also available to clone/edit contents with a PC (for Microsoft® Windows® 2000/XP or Windows Vista®) using ICF format files. To connect the transceiver and a PC, either the optional data communication cable; OPC-1529R or cloning cable; OPC-478/478UC is required.

• Using the OPC-1529R

![Diagram of OPC-1529R connection]

• Using the OPC-478/478UC

![Diagram of OPC-478/478UC connection]

**NOTE:** If you want to clone by connecting the optional data communication cable (OPC-1529R) to the [DATA] jack, set "DATATX" (DV data TX) to "PTT" (p. 134). Otherwise data cloning may not work properly.

◊ Cloning error

**NOTE:** DO NOT push any key on the transceiver (to be cloned) during cloning. This will cause a cloning error.

When the display appears as below, a cloning error has occurred.

If this happens, turn the transceiver (to be cloned) power OFF then ON again and cloning must be repeated.
## Auto power OFF

The transceiver can be set to automatically turn OFF after a specified period with a beep when no switch is pushed.

120 min., 90 min., 60 min., 30 min. and OFF can be specified. The specified period is retained even when the transceiver is turned OFF by the auto power-off function. To cancel the function, select “OFF” in the auto power-off item in set mode.

This can be selected with “AP OFF” in FUNC set mode (SET).

MENU ☞ SET ☞ FUNC ☞ AP OFF (p. 129)
(Push [MENU], (rotate [DIAL], then push [MONI].)

---

## Time-out timer

To prevent accidental prolonged transmission, etc., the transceiver has a time-out timer. This timer cuts a transmission OFF after 1, 3, 5, 10, 15 or 30 min. of continuous transmission. This timer can be cancelled (default).

Approx. 10 sec. before the time-out timer is activated, the transceiver emits a beep tone as a warning.

This can be selected with “TOT” in FUNC set mode (SET).

MENU ☞ SET ☞ FUNC ☞ TOT (p. 128)
(Push [MENU]], (rotate [DIAL], then push [MONI].)

---

## Packet operation

### Data speed

For packet operation, the transceiver can be set to one of two data speeds: 1200 bps (default) or 9600 bps.

1. Enter “PACKET” in the FUNC set mode (SET).

MENU ☞ SET ☞ FUNC ☞ PACKET (p. 129)
(Push [MENU]], (rotate [DIAL], then push [MONI].)

2. Rotate [DIAL] to select the desired data transmission speed from 1200 bps (default) and 9600 bps, then push [MONI].

3. Push [MENU] to exit the FUNC set mode.

- The microphone signal is automatically cut. Therefore, it is not necessary to disconnect the microphone plug from the connector in this case.
- When pushing [PTT] during data transmission, data transmission is interrupted and voice signals have priority.
13 OTHER FUNCTIONS

◇ Packet jack pin assignment

![Packet jack pin assignment diagram]

1. DATA IN
   Input terminal for data transmit. See previous page for details on how to toggle data speed between 1200 (AFSK) and 9600 bps (G3RUH, GMSK).

2. GND
   Common ground for DATA IN, DATA OUT and AF OUT.

3. PTT P
   PTT terminal for packet operation only. Connect ground to transmit data.

4. DATA OUT
   Data out terminal for 9600 bps operation only.

5. AF OUT
   Data out terminal for 1200 bps operation only.

6. P SQL
   Output is high (+5 V) when the transceiver receives a signal which opens the squelch.
   • To avoid unnecessary TNC transmission, connect squelch to the TNC to inhibit transmission when receiving signals.
   • Keep audio output at a normal level, otherwise a “P SQL” signal will not be output.

◇ 1200 bps packet operation

1. Connect the transceiver and a TNC as illustrated below.

![1200 bps packet operation diagram]

2. Set the TNC for transmit.
3. Set transmit delay on the TNC to 50–100 msec., if available.
4. Adjust the TNC frequency deviation if necessary.
   • **When using a deviation meter:**
     Adjust the output of the TNC so that frequency deviation is in the range ±3 to ±4 kHz.
   • **When NOT using a deviation meter:**
     A receiver or transceiver is needed to monitor the transmission—compare the received audio output level when receiving a TNC modulated signal with high level voice signals using the microphone. Then adjust the TNC modulated signal to a lower level than the voice modulated signal.
• Read the instructions supplied with your TNC carefully before attempting packet operation with the transceiver.
• Pin 5 AF OUT is for 1200 bps operation only. This pin cannot be used for 9600 bps operation.
• Over modulation may degrade signal quality. If you find that many transmissions are failing, re-adjust the modulation level.
13 OTHER FUNCTIONS

♦ 9600 bps high speed packet operation
The transceiver supports 2 modes of 9600 bps packet operation: G3RUH and GMSK.

1. Connect the transceiver and a TNC as illustrated below.

   ![Diagram](image)

2. G3RUH mode can handle 16 kinds of modulated wave forms in order to maintain a communication link.
3. Set transmit delay on the TNC to 50–100 msec., if available.
4. Adjust the TNC frequency deviation if necessary (see next page).

   • When using the PTT-P terminal for packet operation, no voice signals are transmitted from the microphone.
   • When pushing [PTT] during data transmission, data transmission is interrupted and the voice signal takes priority.
   • Read the instructions supplied with your TNC carefully before attempting packet operation with the transceiver.
   • Pin 4 DATA OUT is for 9600 bps operation only. This pin cannot be used for 1200 bps operation.
Adjusting the transmit signal output from the TNC

When setting data transmission speed to 9600 bps, the data signal coming from the TNC is applied exclusively to the internal limiter circuitry to automatically maintain band width.

NEVER apply data levels from the TNC of over 0.6 V p-p, otherwise the transceiver will not be able to maintain the band width and may possibly interfere with other stations.

1. When using a level meter or oscilloscope, adjust the TX audio output level (DATA IN level) from the TNC as follows.
   - 0.4 V p-p (0.2 V rms) : recommended level
   - 0.2 V p-p–0.5 V p-p (0.1–0.25 V rms) : acceptable level

2. When NOT using a measuring device.
   ① Connect the transceiver to a TNC.
   ② Enter a test mode ("CALL", etc.) on the TNC, then transmit some test data.
   ③ When the transceiver fails to transmit the test data or transmits sporadically (TX indicator doesn't appear or flashes):
      - Decrease the TNC output level until the transmit indicator lights continuously.
      When transmission is not successful even though the TX indicator lights continuously:
      - Increase the TNC output level.
## Troubleshooting

If your transceiver seems to be malfunctioning, please check the following points before sending it to a service center.

<table>

### Fuse replacement

If the fuse blows or the transceiver stops functioning, find the source of the problem if possible, and replace the blown fuse with a new, properly rated one (FGB 20 A) as shown at right.
## Specifications

### GENERAL

- **Frequency coverage** *(unit: MHz)*
  - **Version** | **TX** | **RX**
  - EUR-1 | 144–146, 430–440 | 144–146, 430–440

  ¹Guaranteed 144–146 MHz only, ²Guaranteed 430–440 MHz only
  ³Guaranteed 430–434 MHz only, ⁴Guaranteed 435–438 MHz only
  ⁵Not guaranteed

- **Type of emission** : FM, AM (Receive only), DV
- **Number of memory channels** : 1052 (incl. 50 scan edges and 2 calls)
- **Frequency resolution** : 5‡, 6.25‡, 8.33‡, 10, 12.5, 15‡, 20, 25, 30, 50, 100, 125, 200 kHz
  ‡Selectable depending on the operating frequency band.
- **Operating temperature range** : –10°C to +60°C
- **Frequency stability** : ±2.5 ppm (–10°C to +60°C)
- **Power supply requirement** : 13.8 V DC ±15%
- **Current drain (at 13.8 V DC: approx.)**
  - Transmit at 50 W VHF: 11.5 A
  - Transmit at 50 W UHF: 12.5 A
  - Receive standby: 0.9 A
  - Receive max. audio: 1.2 A
- **Antenna connector** : SO-239 (50 Ω)
- **Dimensions (proj. not included)** : 150(W) × 40(H) × 199.2(D) mm
- **Weight (approx.)** : 1.3 kg (not incl. cable)

### TRANSMITTER

- **Modulation system** :
  - FM
  - DV (Digital)
- **Output power** :
  - 50/15/5 W (approx.)
- **Max. frequency deviation** :
  - ±5.0 kHz (wide)
  - ±2.5 kHz (narrow)
- **Spurious emissions** : Less than –60 dB
- **Microphone connector** : 8-pin modular (600 Ω)

### RECEIVER

- **Receive system** : Double conversion superheterodyne
- **Intermediate frequencies** :
  - 1st: 46.35 MHz, 2nd: 450 kHz
- **Sensitivity (amateur bands only)** :
  - FM (12 dB SINAD) Less than 0.18 μV
  - DV (BER 1%) Less than 0.35 μV
- **Squelch sensitivity† (threshold)** : Less than 0.13 μV
- **Selectivity† (typical)** :
  - Wide More than 10 kHz/6 dB
  - Narrow More than 6 kHz/6 dB
  - DV More than 20 kHz/60 dB
- **Spurious and image rejection†** : More than 60 dB
- **AF output power† (at 13.8 V DC)** : More than 2.0 W at 10% distortion with an 8 Ω load
- **Ext. speaker connector** : 3-conductor 3.5 (d) mm /8 Ω

†Guaranteed 144–146 MHz and 430–440 MHz ranges only.

All stated specifications are subject to change without notice or obligation.

16 OPTIONS

CS-80/880 CLONING SOFTWARE (free download)
Use this software to program settings such as memory channels and set mode contents quickly and easily via your PC’s RS-232C terminal (using OPC-1529R or OPC-478), or USB port (OPC-478UC). Either OPC-1529R, OPC-478 or OPC-478UC is required.
This software can be downloaded from the Icom home page via the Internet. Access the following URL to download the software and the manual.
http://www.icom.co.jp/world/support/index.html

HM-133 REMOTE-CONTROL MICROPHONE
Remote control microphone with key backlight. Same as that supplied with the transceiver.

HM-103/HM-154 HAND MICROPHONE

OPC-347/1132 DC POWER CABLES
OPC-347 : 7.0 m
OPC-1132 : 3.0 m
Same as that supplied with the transceiver.

OPC-440/647 MIC EXTENSION CABLE
OPC-440: 5.0 m
OPC-647: 2.5 m

OPC-441 SPEAKER EXTENSION CABLE
5.0 m

OPC-474 CLONING CABLE
Used for data cloning between transceivers.

OPC-478/OPC-478UC CLONING CABLE
Used for data cloning between transceiver and PC with CS-80/880 (free download software).
OPC-478 : RS-232C type
OPC-478UC : USB type

OPC-589 MIC ADAPTOR CABLE
Allows you to connect a regular 8-pin microphone.

OPC-1529R DATA COMMUNICATION CABLE (RS-232C type)
Allows low-speed data communication in the DV mode and data cloning operation with CS-80/880 (free download software).

SP-10 EXTERNAL SPEAKERS
For all-round mobile operation. Cable length: 1.5 m

MB-120 MOUNTING BASE
Mounts the remote controller on to a variety of places in vehicle. Remote controller bracket is required for mounting.
CE Versions of the ID-E880 which display the ‘CE’ symbol on the serial number seal, comply with the essential requirements of the European Radio and Telecommunication Terminal Directive 1999/5/EC.

This warning symbol indicates that this equipment operates in non-harmonised frequency bands and/or may be subject to licensing conditions in the country of use. Be sure to check that you have the correct version of this radio or the correct programming of this radio, to comply with national licensing requirements.
