OPERATOR WARNING

Radio Ocean requires the radio operator to meet the requirements for Radio Frequency Exposure. Unauthorized changes or modifications to this equipment may void compliance with ETSI rule. Any change or modification must be approved in writing by Radio Ocean Corp.

This equipment has been tested and licensed to comply with the limits for Class D Digital Marine Devices. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment can generate or radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications and human body. Never transmit before you make sure the antenna is properly located.

This device is only an aid to navigation. Its performance can be affected by many factors including equipment failure or defects, environmental condition and improper handling or use. It is the user's responsibility to exercise common prudence and navigational judgement, and this device should not be relied upon as a substitute for such prudence and judgement. Your Radio Ocean VHF radio generates and radiates radio frequency (RF) electromagnetic energy (EME), this equipment must be installed and operated in accordance with the instructions contained in this handbook. Failure to do so can result in personal injury and/or product malfunction.

1 Equipment Description

1.1 INTRODUCTION

Congratulations on your purchase of Radio Ocean’s RO 4700 marine band radio. Base Station Radio with output power of 25/1 watt. It should be powered by a 13.8VDC power supply.

The radio can support DSC (Digital Selective Calling) operation with specially designed DSC unit, which meets the standard of ITU-R, M493-10. When being connected with GPS, it will display the position (longitude and latitude) of the vessel. Compact fist microphone with digital keys makes for convenient operation of the equipment.

Other features of the radio include:
- Access to all available INTL channels (currently allocated).
- Allows memory all INTL channels for quick recall and memory scan.
- Provides as many as 20 user programmable names with MMSI, 10 distress calls and 20 individual calls for DSC communications.
- Rotary volume control with power on/off, rotary channel selector and rotary squelch adjustable knob give you more convenient operation of the radio.
- 25 watts high output power allows you make contact with others in a long distance of marine communication and 1 watt low power for short distance.
- Separate button for quick selection of the emergency call on CH16.
- Adjustable brightness of backlit for good visibility of large LCD various circumstance.
- External interface easy to connect to GPS and external speaker.
- Mounting gimbal for firm and reliable location of your base station in difference condition.

1.2 ETSI INFORMATION

ETSI (European Telecommunications Standard Institute) has stipulated the specific requirements (EN 301 025-1/2/3) on marine radio with class D DSC feature, for use on non-SOLAS vessels.

2 CONTROLS AND LCD DISPLAY

2.1 BASE STATION (PANEL)

(1) Volume and Power On/Off

0-270° rotary control knob, turn clockwise to power on. Continue to turn until a comfortable audio level.

(2) Squelch

Use this knob to set the squelch threshold.

(3) CH/enter

Rotary encoder (no stop) with momentary push. Rotate this knob to change the current number and change values in menu mode or during programming. Press the knob to enter values.

(4) Band / Save

Select band and set memory channels.

(5) Cancel

the key to cancel last selection or change without saving. It allows step back one level on menu mode. It cancels DSC Distress calls & auto-retransmission of DISTRESS calls.

(6) Band / Save

Select band and set memory channels.

(7) CH/enter

Rotary encoder (no stop) with momentary push. Rotate this knob to change the current number and change values in menu mode or during programming. Press the knob to enter values.

(8) Squelch

Use this knob to set the squelch threshold.

(9) Band / Save

Select band and set memory channels.

(10) Volume and Power On/Off

0-270° rotary control knob, turn clockwise to power on. Continue to turn until a comfortable audio level.

(11) CH/enter

Rotary encoder (no stop) with momentary push. Rotate this knob to change the current number and change values in menu mode or during programming. Press the knob to enter values.

(12) Squelch

Use this knob to set the squelch threshold.

(13) Volume and Power On/Off

0-270° rotary control knob, turn clockwise to power on. Continue to turn until a comfortable audio level.
(6) DSC /menu
Use this key to enter Menu Setup or DSC Call Menu
Call Mode is used for making DSC Calls. Menu Mode is
used to setup the radio.

(7) Hi/Low/mem
Press and release HI/LO button to toggle between
power output 25watt and output 1 watt.
“HI” or “LO” icon appears on LCD display to indicate
setting
Hold the key select memory channel mode

(8) Scan
Start and stop normal or priority scan and MEM
channels and priority channels scan.

(9) Watch
Start dual watch or tri-watch, Stop dual watch or tri-
watch.

(10) 16
Press 16 key to quit all other modes and to into the
priority channel.

(11) DISTRESS
this button is used to send a signal of distress in case of
emergency. See DSC Operation for details of sending
the call. This button is cover by a spring cover.
The Distress Function or any other transmitted DSC
function does not work unless a user’s MMSI has been
entered.

(12) LCD:
Large LCD (2"×1.5”) with viewable area of 4×12 dot
matrix makes it easy to be read.

(13) Built-in Speaker
Guarantee a clear ring and voice communication

2.2 BASE STATION (REAR)

① Antenna Jack: Connect a suitable antenna to your marine VHF
radio to get a satisfying communication.

② Power Source Connect the radio to a 13.8 VDC power source.

③ External Speaker Connection Cable
If need be, you can also use this cable to connect
an external speaker.

④ GPS Connector Connect the radio to a GPS receiver to acquire
the position and time information of your vessel
2.3 HANDSET

① Channel Up/ Down  Press and release to change channel.

② 16  Press 16 key to quit all other modes and to into the priority channel.

③ Hi/Low:  Press and release HI/LO button to toggle between power output 25 watt and output 1 watt.

④ PTT:  Push to hold to transmit; release to receiver.

⑤ DSC/MENU  Use this button to enter Menu setup or DSC call Menu Call Mode is used for making DSC Calls. Menu Mode is used to setup the radio.

⑥ Alphanumeric  Alphanumeric symbol keys total 12 units, it is used to input alphabet and numbers also left shift, right shift, cancel enter.
Under normal operation, the numerical key (0 – 9) enable direct channel access function. Whenever 1st digit key in, the display will flash the digit # but not yet tune the channel. If no more key in within keystroke time out, the channel will be tuned immediately. If another digit key pressed within the time-out period, the key in 2-digit channel # will be recalled immediately.

Under the Menu mode, those keys can be used to entry the MMIS# and set the required Numerical data.

Besides the numerical data could be key in, those keys could be used to enter the channel name and edit the Buddy list.

3 INSTALLATION

3.1 SUPPLIED ACCESSORIES

Manufacturer supplies you the following accessories as soon as you purchase this RO4700 radio:

1. Mounting gimbals (1 set)
2. Power Supply Cable (1 set)
3. Mounting Knob (2 pcs)
4. Wall Hanger (1 pcs)
5. GPS Connection Cable (1 set)
6. Speaker Cable (1 set)
7. Self-tapping Screw for Fixing Mounting Gimbals (4 pcs)
8. Flat Screw for Fixing Mounting Gimbals (4 pcs)
9. Plain Washer (4 pcs)
10. Nut (4 pcs)
11. Self-tapping Screw for Fixing Wall Hanger (2 pcs)
12. Flat Screw for Fixing Wall Hanger (2 pcs)
13. Plain Washer (2 pcs)
14. Nut (2 pcs)
15. Cap for Flash Mounting Kit (4 pcs)
16. Flash Mounting Kit (2 pcs)
17. M5*10 Screws for Flash Mounting Kit (2 pcs)
18. M5*32 Screws for Flash Mounting Kit (4 pcs)
19. Plan Wash for Flash Mounting Kit (4 pcs)
3.2 LOCATION REQUIREMENTS
To more conveniently and efficiently use your marine radio, find a mounting location that:
- Is far enough from any devices like devices to avoid any interference caused by the speaker magnet in your radio during their operation;
- Provides accessibility to the front panel controls;
- Allows connection to a power supply and an antenna;
- Has free space nearby for installation of a handset hanger;
- Where the antenna can be mounted at least 3 feet from radio.

3.3 CONNECTIONS
POWER SUPPLY
You radio should be powered by a 13.8VDC power supply. Red cable is for positive pole and the thicker black one is for negative pole.

EXTERNAL SPEAKER
If needed, you can connect your radio to an external speaker with the supplied connection cable. White cable is for positive pole and the thinner black one is for negative pole.

GPS EQUIPMENT
When your marine radio RO4700 is connected by the GPS cable to a GPS equipment, it can obtain the information of both its current location (longitude and latitude) and the local GMT.

GPS CABLE
Line up the arrow on the connector with the arrow on the GPS cable (supplied) and then plug together. The GPS cable has eight pins as follows:

<table>
<thead>
<tr>
<th>Pin</th>
<th>Wire</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Red</td>
<td>Not used.</td>
</tr>
<tr>
<td>2</td>

</tr>
<tr>
<td>8</td>
<td>Grey</td>
<td>Not used</td>
</tr>
</tbody>
</table>

NEMA 0183 Version (1.5 to 3.0) sentence format:: GLL, GGA, RMC, GNS.
Note: never short wires, this may cause damage.

Connecting: GPS cable round plug to radio and the wire of yellow and the green connect to GPS navigation receiver.

ANTENNA
A very important part for the performance of any communication system is a suitable antenna. Consult your dealer about antennas and ask them to help to mount your radio.
3.4 MOUNTING THE RADIO

Mount the radio on your vessel:

1. Find an appropriate location defined in section 3.2;
2. Place the mounting bracket on the location surface, use a pencil to mark the location of four holes where the fixing screws are to go into;
3. Caution: Be careful not to drill through the mounting surface.
4. Remove the bracket, drill four holes smaller than the screw diameter, then re-place the mounting bracket on the surface aligning the drilled holes;
5. Insert the four fixing screws and secure the bracket to mounting surface using the supplied bolts, spring washers, plain washers and nuts;
6. Caution: if you can not reach behind the mounting surface to attach the nut on the bolts, use the supplied self-tapping screws to fasten the bracket.
7. Insert the four fixing screws and fasten them with a Philip screw-driver with attention not to screw too tightly;
8. Mount the base station onto the bracket with notice of the matching of the protuberances on the both inner side of the bracket and the pits on the two sides of the base station (the selectable pits on the sides of the radio allow you adjust the direction of the radio face to satisfy your easy-to-read-and-use, 15° for each rotation and totally 45° tolerance);
9. Attach the supplied mounting knobs from the two sides of the bracket to fixing the base station securely.

Caution: Keep the radio and handset at least 1 meter away from any magnetic devices such as compass on your vessel.

The supplied universal mounting bracket allows you to mount your base station from overhead or on dashboard with a big scope of angle as many as 45°.

To change the angle after installation:
10. Loosen the mounting knob at the sides of gimbal, first.
11. Then adjust the base station to an appropriate direction with matching of the protuberances on the inner sides of gimbal and pits on the outer sides of base station.
12. Tighten the knob to secure.

3.5 ANTENNA MOUNTING/ THE EME EXPOSURE

For optimal radio performance and minimal human exposure to radio frequency electromagnetic energy, make sure the antenna is:

- Connected to the radio before transmitting;
- Properly mounted;
- Locale where it will be away from people;
- Locate at least three feet (91 cm) from the Base Station transceiver and Handsets;
- Use standard type of PL259 connector

3.6 MOUNTING THE HANDSET

Find a mounting location near the base station to mount the wall hanger for handset. The distance between the base station and the wall hanger should be less than the length of the handset cable.
Caution: Keep the radio and handset at least 1 meter away from any magnetic device such as compass on your vessel.

3.7 RECESSED INSTALLATION
1. Tape the installation template onto the chosen location site.
2. Cut out the area marked by the solid dark line. (The dashed line indicates the total area that will be covered by the radio fascia after installation.)
3. Remove the installation template and slide the radio into the cavity.
4. Working from the rear of the bulkhead, align the racheted outstand on each side of the radio with the central hole in each mounting bracket.
5. Use the two short M5x10 screws to screw the mounting brackets to the sides of the radio.
6. Slide two M5x32 screws through the screw hole in the mounting bracket, then attach the lock nut and the stopper. If your bulkhead exceeds 13mm, the stopper nut can be discarded if necessary.
7. Tighten the M5x32 screws until the radio is held against the rear of the bulkhead.
8. Tighten up the lock nuts to secure the installation.

BASIC OPERATION

4.1 TRANSMISSION AND RECEPTION
CAUTION: Transmitting without an antenna may damage the radio.
1. After the radio has been installed, make sure of the power supply and antenna being properly connected.
2. To rotate the VOLUME/POWER knob clockwise turn on the radio and select a comfortable volume level.
3. To turn the SQUELCH knob clockwise until the background noise disappears.
4. Rotate CH knob to select channel
5. Press Hi/Lo key to select high power or lower power.
6. Press the PTT (Push-To-Talk) button on the handset to make the radio into transmission mode. TX indicator on LCD is displayed.
7. Speak clearly in a normal voice into the microphone.
8. Once the transmission is finished, release the PTT button. The radio is at receive mode, icon Rx appear on screen.

4.2 CHANNEL SELECTION
4.2.1 Channel 16 Key gives you a quick access to the channel 16
Channel 16 is the distress and safety channel. It is used for establishing initial contact with another station and for emergency communications. Channel 16 is monitored during dual watch. While standing by, monitoring channel 16 is a must.
4.2.2 INTL MODE
There are all 55 International channels listed in the channel list section. These channel groups may be specified for the operating area. To select the desired channel: rotate CHANNEL/SELECT knob to select channel in the active band. With the knob being rotated, the channel is displayed on the LCD display;

4.3 MEMORY CHANNELS
4.3.1 Memory Channels selection
1. Press and hold the Hi/Lo/ mem button to enter the MEM mode;
2. At mem mode, rotate CHANNEL/SELECT knob to select MEM channel in the memory. With the knob being rotated, the
channel and the icon M will be turned on for indication that channel be saved in MEM lists displayed on the LCD display.

4.3.2 SAVE favorite the Channels
Your can store in the hope of channels as favorite channel.
Program the FAV channel and store Process as follow:
1. At normal mode, tune to the desired channel and then press and hold the BAND/SAVE key to save it as Favorite channel. The icon will be turned on for indication that channel be saved in FAV list.
2. Then tune to next desired channel and repeat the keystroke sequences till all desired channels be programmed / saved.

4.3.3 MEM Channels delete
1 Delete the channel from the MEM list at Normal mode. Select the target channel with icon ON. Press and hold the BAND/SAVE key till the icon turn OFF. The target channel will then be deleted out from the MEM list. Repeat the keystroke operation for those unwanted channels.
2 If no channel has been programmed, an error beep occurs with indicate error message.

4.4 Transmit time-out timer (TOT)
When the PTT button on the microphone is held down, transmit time is limited to 5 minutes. This will avoid unintentional transmissions. About 10 second before automatic transmitter shutdown, a warning beep will be heard from the speaker(s). The transceiver will automatically go to receive mode. Before transmitting again, the PTT button must be released and then pressed again.

4.5 Scan:
Scanning is an efficient way to locate signals quickly over a wide frequency range.
The transceiver Scan mode has 2 types available: normal scan, memory channels scan. If no memory channels the way is normal all scan (1.2.3.4...) , if there is memory channels only scan memory channels, every one’s have a normal scan and the priority scan
1 During normal scan Press and hold SCAN Key over 3sec, the Priority scan mode (1,16,2,16,3,16...) will be selected. P-scan icon will be appear on LCD Press and hold SCAN key over

3sec to turn it back to normal scan, the scan mode icon will be displayed.
2 During the SCAN modes: Press Up/Down key (CH knob clockwise/anti-clockwise) will change the scan direction.
3 Press SCAN key again will terminate the scan operation and stop at the last used channel.
Press CANCEL key will also terminate the scan function and state at the last used channel.
It also can be to cancel by 16.PTT.

4.6 Watch
4.6.1 Dual watch
Press Watch key to activate the DUAL WATCH mode. Monitor the current channel and Ch 16 in cycle. Icon “DU” will appear on the LCD.

4.6.2 Tri-watch
Press and hold Watch key to activate the TRI WATCH mode. Monitor the current channel, CH 16 and CH 9 in cycle. Icon “TRI” will be turn ON
To quit the mode, press WATCH, 16, DSC/MENU, CANCEL key.
Press PTT key to TX mode of current channel

4.7 POSITION INDICATION
Your transceiver can display the position of the vessel's (longitude and latitude) as well as time and data information, if connected to a GPS receiver; if no GPS equipment to be connected, an alert tone of 1-minute duration can cancelled By any button is sounded at 4 hour intervals to encourage manual input of positional data. Once no manual input is made for 23.5 hours, GPS disappears from the screen, the position data transmitted goes to 9's and all the time data goes to 8's.

DISTRESS

100°15.1002 E
08:10 UTC

5 DIGITAL SELECTIVE CALLING
5.1 GENERAL
DSC (Digital Selective Calling) is a semi-automated method of establishing a radio call, it has been designated by the International Maritime Organization (IMO) as an international standard for establishing VHF, MF and HF radio calls. It had...
also been designated part of the Global Maritime Distress and Safety System (GMDSS). It is planned that DSC will eventually replace aural watches on distress frequencies and will be used to announce routine and urgent maritime safety information broadcasts. This new service will also allow mariners to initiate or receive distress, urgency, safety and routine calls to or from another vessel equipped with a DSC transceiver.

5.1.1 MARITIME MOBILE SERVICE IDENTITY

An MMIS is a nine digit number used on Marine Transceiver capable of using Digital Selective Calling (DSC). This number is used like a telephone number to selectively call other vessels. Refer to section 6.12 (USER MMSI ENTRY).

5.1.2 HOW CAN I OBTAIN A MMSI ASSIGNMENT?

Contact your dealer.

WARNING

This radio is designed to generate a digital maritime distress and safety call to facilitate search and rescue. To be effective as a safety device, this equipment must be used only within communication range of a shore–based VHF marine channel70 distress and safety watch system. The range of signal may vary but under normal conditions should be approximately 20 nautical miles.

5.2 DSC CALL TYPES

Press the DSC/MENU key to pop up the menu for user to select the DSC call type to send. Note that only four calls can be shown at any one time on the screen.

Press + /–or rotate the CH knob scroll up and down the call types until the cursor is positioned at the desired option.

Press the CH knob the call types are:

<table>

</table>

ALL SHIPS Make an Urgency or Safety call to all ships.

CALL LOG Allow a review of all stored Calls by number and time of call. An individual call type can be placed to the selected MMSI/NAME in the LOG. The call at the end of the list is automatically erased. The earliest call stored at the end of the list. There is 20 calls could be stored.

DISTRESS Log Allow a review of all stored Distress calls by number and time of call. The call at the end of the list is automatically erased. The earliest call stored at the end of the list. There is also 10 calls could be stored.

POS REQUEST The option enables you to request GPS position information from any vessel for which an MMSI number is known, such request can pick up from Buddy list or manual entry.

EXIT quit the menu mode

DISTRESS A specific Distress key is used to make the distress call.

The call send out the position and time information from the input NMEA data along with your MMSI number. This digital information lets other ships and shore equipped with appropriate DSC equipment know where you are and that you are in a distress situation, except immediate help is needed, never use the distress call.
5.2.1 Sending a distress Call

Note: Only having a MMSI code of your radio and DSC enable, can you initiate a DSC transmission. To enter the MMSI code see 6.9.1.

1. Open the red cover label DISTRESS.
2. Press the DISTRESS key momentarily. The Text area of the display reconfigures to show the Nature of Distress menu.
3. If time is available, rotate the CH knob to select the Nature of Distress, the default are "UNDEFINED".
4. Hold down the DISTRESS key for more than 3 seconds Until you see the distress call sent message on the screen. The whole display screen flash and beep loudly.
5. If DISTRESS button is released before 3 seconds, the initiation of distress call is not taken into effect. If button is pressed for more than 3 seconds, DISTRESS call is sent whether channel 70 is busy or not. When Distress is sent, the acoustic alarm goes to a continuous tone until acknowledgement received or the DISTRESS call is cancelled.
6. During the distress call sequence, the radio simultaneously watches Channel 70 for a DSC acknowledgement and Channel 16.
7. When the distress call is acknowledged, the acoustic alarm stops and the radio returns to normal VHF operation on channel 16, with high power relay to the connected station via the microphone.
8. If no acknowledgement is received, the unit retransmits the DISTRESS call at random intervals of 3.5 to 4.5 minutes until a response is received or the call is manually cancelled, by pressing CANCEL button for twice.

5.2.2 Send an All Ships Call

1. Press DSC /MENU key. Rotate the CH knob to select "ALL SHIPS". Press the CH knob to enter ALL SHIPS. The All Ships menu displays LCD the categories from which you can select

5.2.3 Send a GROUP Call

This feature allows the user to contact a group of specific vessels using DSC and to automatically switch to a desired channel. Before sending a GROUP call, you must be set the GROUP MMSI.

1. From the DSC/MENU select the GROUP CALL item. Press the CH key, the screen displays the names of your groups.
2. Select the group that you want to call, then select the channel Press the CH knob to send a group call. Once the call is sent, the Text area of the display momentarily shows the Calling group message.
3. After the GROUP CALL is transmitted, the radio will return to normal VHF with the designated channel.
4. Press the PTT to start talk.

5.2.4 MAKE A ROUTING CALL (INDIVIDUAL)

You can make an individual call, either to a ship or to a boast station.

5.2.4.1 Manually Sending an Individual Call

1. Press DSC /MENU to DSC mode, then select "NEW CALL". Press the CH knob. The arrow is pointing to <MANUAL>
2. Press the CH knob again access manual enter ID screen, enter the MMSI number, when MMSI entry is complete, press the CH knob to accept the selection.

3. Then rotate the CH knob to select the working channel and press the CH knob to accept select.
   *(Only in the case of a call to a ship, it is permitted to enter a talk channel; a call to a coast station, the coast station will specify the channel to talk on in its acknowledgement.)*

4. The radio summarizes the call details and ask for confirmation to send the call (send?).
   Press the CH knob again to send the call. Once the call is sent, the Text area of the display momentarily shows the Calling message., then display a awaiting acknowledgment.

5.2.4.2 Sending an Individual Call (MMSI stored in Buddy list)
1. Press DSC /MENU to DSC mode, then select "NEW CALL". Press the CH knob, the arrow is pointing to <MANUAL>
2. Rotate the CH knob select the person of the Buddy list that you want to call. the operation procedures are as same as the manual sent an individual call.

5.2.4.3 ACKNOWLEDGEMENT OF AN INDIVIDUAL INCOMING CALL
1. If INDIV REPLY switches to MANUAL the radio requires the operator to manually send an acknowledgement to the requesting radio. Press CH key to send an acknowledgement or CANCEL key to cancel.
2. If INDIV REPLY switches to AUTOMATIC the radio will automatically send an acknowledgement to the requesting radio within 10 seconds of receiving the call.

5.2.5 LAST CALL (RECALL THE MOST RECENT INCOMING CALL)
This facility also is useful and is used frequently as routing individual call
1. Press the DSC / Menu key to enter the DSC mode LAST CALL will be pointed, press CH key to display the detail information of the last call
2. Select the working channel for individual call and press CH key. The radio summarizes the call details and ask for confirmation to send the call
3. Press CH knob to send the call.

5.2.6 SEND an INDIVIDUAL CALL USING THE CALL LOG
The CALL LOG contains the contact details for the 20 most recent incoming calls, so you call any of them again quickly
1. Press the DSC / Menu key to enter the DSC mode, select CALL LOG, Press up/down key to scroll for previous call.
2. Press the CH key to conform the choice then follow the as the ways to make the call in 5.2.4.2
   *(To save this log entry you BUDDY LIST, select SAVE, then press ENT and enter a name the logged MMSI is automatically displayed.)*

5.2.7 POS REQUEST AND POS REPLY
5.2.7.1 POS REQUEST (REQUEST THE LL POSITION OF A BUDDY)
The option enables you to request GPS position information from any vessel for which an MMSI number is known.
1. Select the POS REQUEST on the DSC Menu, press the CH key to enter the BUDDY list (<MANUAL> AND BUDDY list) select the one for position information.
2. The Call will be initiate and same as individual call procedures.

5.2.7.2 POP REPLY
The position relay can to send your position to another radio with this feature. Your radio must have an operating GPS receiver connected to be used to send to the position.
POS REPLY either can manually send your position information or do it automatic which depending upon on your ‘s setting. If set on the manual reply, operation procedures as follow:

1 when you received POS request call, An alarm (pi-pi) sounds, LCD displays as follow:
2 Press the CH key to transmit your own ships’ position and time information
3 Press [CANCEL]t to record the received information, then the screen goes back to default.

5.3. Receiving a DSC Call
When a DSC call is received, the radio automatically responds based on the type of call. The information displayed on the LCD varies depending upon the call type. See chart below.

5.3.1 Receiving Distress Call
1 When a distress call is received, the radio automatically tunes to channel 16, and the Distress Alarm Tone sounds. The call data is stored in the distress log. Pressing any key disables the alarm.
2 When position data is included within the signal, it is displayed in the Text Area of the LCD. When no position data is included within the signal, the message "--:--:--" is displayed in the Text Area of the LCD.
3 You must continue to monitor channel 16 as a coast station may require assistance in any rescue attempt

5.3.2 Receiving a Distress ACK Send from a coast station
1 When a Distress Relay Call is received, the Base Station automatically tunes to Channel 16, and the Distress Alarm Tone sounds. Pressing any key disables the alarm. When position data is included within the signal, it is displayed in the Text Area of the LCD. The call data is stored in the distress log.
2 You must continue to monitor channel 16 as a coast station may require assistance in any rescue attempt

5.3.3 Receiving a Distress Relay Call
1 When a Distress Relay Call is received, the Base Station automatically tunes to Channel 16, and the Distress Alarm Tone sounds. Press any key disables the alarm. The call data is stored in the distress log. When position data is included within the signal, it is displayed in the Text Area of the LCD.
2 You must continue to monitor channel 16 as a coast station may require assistance in any rescue attempt

5.3.4 RECEIVING AN ALL SHIPS CALL
1 When an All Ships Call is received, the Alarm Tone Sounds, the radio automatically tune to the designated Channel, and press any key to disable the alarm.
2 You must continue to monitor the channel so as to receiver the voice communication.
5.3.5 RECEIVING A GROUP CALL
1 When a group call is received, the Alarm Tone Sounds, the
radio automatically tune to the designated Channel, and Press
any key to disable the alarm.
2 Monitor the traffic channel for an announcement from the
calling ship.
3 The call data is stored in the CALL LOG

5.3.6 RECEIVING AN INDIVIDUAL CALL
1 When an Individual call is received, the Alarm Tone Sounds
The radio automatically tunes to the channel designated in the
DSC signal,
2 The MMSI contained within the signal are displayed on the
Text Area of the display. If the MMSI correlates to an MMSI
stored in the Buddy List, the corresponding name is displayed
in place of the MMSI.
3 The DSC signal data is stored in the Call Log.

5.3.7 RECEIVING AN “POSITION RELAY” CALL
1 When “Position Reply” received, the Alert tone sound and the
“POS Received” message on 1st line and display the sender
GPS data.
2 The time & position could not be stored but able to output to
the NMEA port for external Chart-plotter.
3 Last Rx call information is stored in the position of menu “LAST
RX”

5.3.8 RECEIVING A GEOGRAPHIC AREA CALL
A GEOGRAPHIC AREA CALL are received by vessels by
within a specific geographical boundary area.
1 When you receive notification of a geographical call, press any
key to cancel the alert. The radio automatically selects the
channel designated in the incoming call. The time and the user
MMSI are displayed on the screen and the call data is stored in
the call log
2 Monitor the working channel for an announcement from the
calling vessel.

6 SETUP MENU
6.1 MENU FUNCTION DESCRIPTION
The radio’s setup functions are accessed through the Menu mode.
Menu mode selections are as follows.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
</table>
| BUDDY LIST   | Selects the BUDDY List Entry routine to enter Names and
               MMSI's for frequently called DSC stations. Up to 20 names
               could be stored.                                  |
| BACKLlight   | Set the backlight level, total 8 level be available. |
| CONTRAST     | Selects display contrast setting: 1-8 levels.          |
| GPS/TIME     | Set the Position info if no GPS attached and define the display
               POS and Time format, Offset and COG/SOG display settings. |
| RADIO SETUP  | There are 4 items that user can customize – CH Name, Ring
               Tone Volume, Beep Volume and Internal Speaker on/off. |
| DSC SETUP    | There are 5 functions that allow user to alter – User MMSI
               entry, Group MMSI entry, Individual Reply, DSC enable ,
               and POS reply                                      |
| RESET        | Recall ex-factory setting                            |

6.2 Set-Up Menu Navigation
To access the Menu Mode:
Press and hold MENU/DSC key, Text area displays the Set-Up Menu
list.
To exit the Menu mode or sub–mode:
Press the 16/9 or CANCEL key or else select the EXIT option from the menu. Rotate the CH knob to select the Item within the Set-Up Menu list. To confirm a selected item for adjustment, push the CH knob. When the desired setting is done, press the CH knob to enter the setting, and move back to the Main Menu list. Set Up operation is exited by turning the unit off. All changes are saved in EEPROM (exception Manual Enter GPS Data) During Set-Up operation, TX and RX are available.

6.3 Buddy List
The Buddy List can store up to 20 entries with Name and MMSI#. User can add, edit or delete the record from the list under this submenu.

6.3.1 Adding an Entry
Either use digital keys of hand mike or CH knob entry name and MMSI. To use the CH knob enter way as follow:
1 Select Buddy List and the cursor is at <NEW> press CH knob entry page which prompt up to allow enter Name and MMSI.
2 Rotate the CH knob to select the first desired character (A-Z, 1-9, Space and Back Arrow "<") for the name. When the desired character is shown, push the CH knob to enter, the next characters select all the same. The characters can be up to 12. When the last digit is entered, the activation advances to the first MMSI digit.
3 Enter the MMSI associated with that Buddy name (this must be numeric) Prefix 00 will treat as Coast. Once 9 digit be entered, pops up a new page to ask for confirmation to save.
4 Press the CH knob to save the new entry, which is displayed at the top of your BUDDY LIST.
5 Press CANCEL will terminate the process without saving go back to Buddy list page.
6 When the Buddy list is full, you cannot make a new entry until you have deleted an existing entry.

6.3.2 Edit Existing Entry
1 Pick up one from Buddy list and edit Press CH knob one Page pops up item for you to edit or delete. Choose EDIT.
2 when you are finished editing. Press CH knob into a new page prompt in to ask for confirmation to save.
3 Press the CH knob to save the new edit. The Buddy list is displayed again. If more changes are required repeat steps1 thru 3 otherwise, press cancel to exit.

6.3.3 Delete an entry
1 Select the one which you want to delete from the list.
2 rotate the CH knob to select the delete option.
3 press and hold the he CH knob to confirm the delete action.
4 the selected record will be removed and go back to BUDDY list page. You can repeat steps from 1 to 4 to delete more records, or press cancel to exit.

6.4 BACKLIGHT Adjustment
1 Select BACKLIGHT and press the CH knob. There are 8 levels control for the BACKLIGHT.
2 Rotate the CH knob to adjust the setting. Press the CH knob to permanently enter the setting and return to the MENU LIST.

6.5 CONTRAST Adjustment
1 Select CONTRAST and press the CH knob. There are 8 levels control for the contrast. The higher numbers the darker LCD.
2 Rotate the CH knob to adjust the setting. Press the CH knob to permanently enter the setting and return to the MENU LIST.

6.6 GPS/TIME
The radio automatically detects NMEA strings and decodes appropriate latitude/longitude position and time. If the GPS navigation receiver is not connected on or is not functional, a manual latitude/longitude position and UTC should be entered and used in the DSC distress transmitted message.
When valid Lat/Lon information is detected, the data is display on the LCD, when there is no valid position information, NO GPS appears.

6.6.1 Manual Enter GPS DATA
If no GPS data is available, POS DATA REQ is displayed, Alarm sounds for 5sec or till any key is pressed.

The manual entry function is just valid if and only if no GPS connected
1 select GPS/TIME then manual
2 enter the latitude, then the longitude, then the UTC.
3 PRESS the CH knob, when all the information is correct.
The vessel’s lat/lot with the UTC time are shown on the screen. The manual entries are cancelled if a real GPS position is received.

6.6.2 Settings
You can also set what time and position information is display on the screen
● Whether Position data is displayed
● Whether the time is displayed
● Whether a Time Zone Offset is used
● How the time data is formatted
● Whether COG/SOG data is displayed

6.6.2.1 Position display on/off
You can choose the position data displayed on the normal mode or not
1. Select GPS/TIME then SETTINGS, then POS DISPLAY

2. Select ON(on) or OFF(off)as desired, this is example, selected on and the screen shows the vessel position.

6.6.2.2 TIME display on/off
You can turn on/off the time displayed at the normal mode
1 Select GPS/TIME then SETTINGS, then TIME DISPLAY
2 Select ON(on) or OFF(off)as desired, in this example, selected and the screen no longer shows the time

6.6.2.3 LOCAL TIME (TIME OFFSET)
You can set the add/subtract value from UTC time to equal to local time.
When offset value is added, the time will be displayed as LOC instead of UTC
First to set the offset direction + or – and then value in ½ hr. step. The updated result will be displayed immediately

6.6.2.4 TIME FORMAT OPTIONS (TIME FORMAT)
You can choose display time in 12 hr or 24 hr format.

DISTRESS 27°34.1268 N 102°55.5678 W
TIME OFFSET +1.5 HRS
10:56AM LOC.
TIME FORMAT >12 HR
24 HR
10:56AM LOC.
6.6.2.5 COURSE/SPEED DISPLAY OPTIONS (COG/SOG)

You can enable COG (Course over Ground) and SOG (Speed over Ground) displayed on normal mode. If the TIME display is turn ON, COG/SOG will be turned off automatically, since it share the same bottom line for display.

6.7 RADIO SETUP

Under Radio Setup submenu, there are 4 items that user can alter settings.

6.7.1 CHANNEL NAME display and EDITING

To set the channel name to ON or blank on the first line. Maximum of 12 characters could be set for channel name. channel name also allows to edit. The ways same as Buddy List edit procedures.

6.7.1.1 CHANNEL NAME display

1 Select RADIO SETUP then CH NAME, then DISPLAY
2 Select ON (on) or OFF (off) as desired, this is example, select on and press the CH knob the screen shows the channel name.

6.7.1.2 CHANNEL NAME EDITING

1 Select RADIO SETUP then CH NAME, then CH INFO, press the CH knob the screen shows the channel name.
2 Select EDIT and press the CH knob to edit the existing name tag, Input the new name over the existing name and press the CH knob to display the YES/NO conformation.
3 Press the CH knob to confirm the new channel name, then press cancel to return to the menu.

6.7.2 RING VOLUME ADJUSTMENT

1 Select the RING VOLUME by CH knob and then display the option – HIGH and LOW as ringer tone setting.
2 Press The CH knob key again to confirm the changes.

6.7.3 BEEP VOLUME ADJUSTMENT

1 The key beep tone volume level. Select the BEEP VOL by The CH knob and then display the option – HIGH, LOW & OFF as key beep setting.
2 Press The CH knob key again to confirm the changes.

6.7.4 INTERNAL SPEAKER ON/OFF

1 Select the RING VOLUME by CH knob and then display the option – HIGH and LOW as ringer tone setting.
2 Select ON (on) or OFF (off) then press The CH knob key to enable the setting and return to the menu.
6.8 DSC SETUP
The submenu is used to set behavior of the DSC/ATIS function.
The following 5 items are available for selection.

USER MMSI
GROUP MMSI
INDIV REPLY
DSC ENABLED
POS REPLY

6.8.1 ENTER YOUR USER MMSI
This is a once-only operation.
You must enter your user MMSI first then you can access the DSC functions.
1 Select DSC SETUP then USER MMSI and press the CH knob. If an existing MMSI is stored, the values appear.
2 If the MMSI is blank, a dashes line appear. Enter user MMSI along the dashed line. Press the CH knob to confirm each correct entry to move to the next digit.
If you make an error, Rotate the CH knob < appears, then press the CH knob to backup and correct the entry.

3 Hold the CH knob to store your user MMSI.
4 Enter your user MMSI again as a password check, hold the CH knob to permanently store the your user MMSI and return to the menu.
5 You can view your stored user MMSI at anytime by selecting user MMSI in the main menu.
6 If there is no USER MMSI stored and the radio’s DSC function is attempted, the radio says “DSC IS NOT OPERATIONAL.” & “PLEASE ENTER MMSI” as below.

DSC WARNING MESSAGE

6.8.2 MAINTAIN GROUPS
You can program up to three group MMSI numbers and associated Group names, group MMSI numbers always begin with a zero (0). You only enter the last 8 digits of the group ID number, the initial “0” is automatically entered.

6.8.2.1 ENTER YOUR GROUPS
1 Select GROUP MMSI and press the CH knob. If an existing names & MMSI data are stored, the values appear.
If blank, the dash appear on LCD
2 The entry procedures are same as that of the BUDDY LIST.

6.8.2.2 EDIT USER GROUPS
1 Select DSC SETUP then GROUP MMSI and press the CH knob. The existing names & MMSI data are displayed on screen. Select the Buddy name or, only the MMSI that you wanted
2 Press the CH knob to edit. The entry procedures are same as that of the BUDDY LIST
3 When the edition is finish press the CH knob to store the changes and return to the GROUP MMSI screen.

6.8.2.3 DELETE A GROUP
1 Select GROUP MMSI and press the CH knob. The existing group names are displayed on screen
2 Select that you wanted delete and press the CH knob to display EDIT or DELETE item
3 Select DELETE and press the CH knob to display DELETE GROUP menu arrow point the YES, then press the CH knob to
empty the group and return to the USER GROUP screen. The LCD displays the group for > - - - - - - -.

6.8.3 INDIVIDUAL REPLY
You can respond to incoming individual calls with an automatic response or a manual.
1. Select DSC SETUP, then INDIV REPLY press the CH knob to display INDIV REPLY MANUAL or AUTOMATIC.
2. Select AUTOMATIC for an automatic response, or MANUAL for a manual response.
3. press the CH knob to confirm your choice and return to the menu.

6.8.4 DSC ENABLE
To temporary turn off the DSC function, such as sailing to inland water or no DSC region.
1. Select DSC SETUP, then DSC ENABLED, Press the CH knob to display DSC ENABLE ON/OFF.
2. Select OFF for turn off DSC function.
3. press the CH knob to confirm your choice and return to the menu.

6.8.5 POS REPLY
You can set the radio to respond the Position Request. In on of three ways, automatic, manual, off.
1. Select DSC SETUP, then POS REPLY. Then press the CH knob, the automatic, manual, off appear on the screen.
2. Select your response and press the CH knob to confirm and return to the menu manual.

6.9 RESET
This feature resets every setting to the factory defaults, except USER MMSI and BUDDY LIST. GROUP MMSI, ATIS MMSI.
1. Select RESET, press CH key, the radios asks for confirmation
2. Select yes, press CH key to reset the radio and return to the menu.

REVIEW ALL USER SETTINGS RESTORED TO DEFAULTS
7 MAINTENANCE

Your VHF Marine Radio RO4700 is a marine radio of water proof who can meet the requirement of JIS level 7, gives you a good reliability when using in marine circumstance. The equipment is designed to be maintenance free. To keep your radio in good working condition:

- Never unscrew the equipment, either the base station or handset. For in such case, the water proof performance will be greatly damaged.
- If the radio becomes dirty and dusty, wipe it clean with a moisture cloth, but pay attention to never using such solvents as benzene or alcohol, for they may damage the radio surfaces.
- Once your equipment does not work properly, never allow an unqualified person to tamper with internal adjustments. Please contact the local dealer for help.

TROUBLE SHOOTING

<table>
<thead>
<tr>
<th>Item</th>
<th>Symptom</th>
<th>Cause/Remedy</th>
</tr>
</thead>
</table>
| 1    | Unit can not be powered on. | - Check the connection to the base station.  
- Check the volume control. |
| 2    | No sound comes from the speaker | - Set [VOL] to a suitable level.  
- Set squelch to the threshold point. |
| 3    | Transmitting is impossible, or high power can not be selected. | - Check to see if the PTT switch is defective.  
- Check to see if the microphone or MIC jack is defective.  
- Some channels are for low power or receive only, change to another channel.  
- Push H/L to select high power. |
| 4    | Low receiver sensitivity. | - Check to see if the antenna being bad connected.  
- Check the connection between coaxial cable and base station. |

8 SPECIFICATION

Frequency coverage:
- Transmit: 156.025 ~ 157.425 MHz
- Receive: 156.025 ~ 162.025 MHz
- Mode: FM (16k0G3E)  
DSC(16k0G2B)

Power supply: 13.8V DC ±15% (negative ground)

Current drain (at 13.8V): 
- Tx high (25W): 5.5A typical
- Max audio: 0.8A typical

Frequency stability: ±10ppm (-15°C to +55°C)

Antenna impedance: 50 Ohm

Microphone: Condenser type

Sensitivity at 12dB Sinad: 0.5μV

Adjacent Channel Rejection: 70dB

Audio output power: 2W @ 8 Ohm

Audio Distortion: 10%

RF Output Power: High: 25W/Low: 1W

Harmonic Emissions: High: 80dB/Low: 60dB

Dimensions (HWT): 71×161×147mm

Weight: 1290g
