#### Features of This Product

- CEPT 40 Channels UK 40 Channels
- Complies with UK MPT 1382
- SoundTracker™System
- Heavy-Duty Dynamic Microphone
- Full 4 Watts RF Power Output
- Instant Channel 19 and 9
- Front Panel 4-Pin Microphone Connector
- Switchable Noise Blanker-Automatic Noise Limiter
- RF Gain
- 2.75-metre Microphone Cord

### **NOTICE**

A licence is required for use in the UK.CB licensing applications can be obtained from The Radio Licensing Centre, P.O. Box 885, Bristol, BS99 5LG,UK or contact your local CB dealer for additional information.

## **Installation** Installation

### Location

#### Location

Plan location of transceiver and microphone bracket before starting the installation.

Select a location that is convenient for operation, yet does not interfere with the driver or passenger.

The transceiver is usually mounted to the underside of the dash with the microphone bracket beside it.

# Mounting and Connection

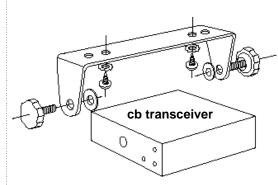

#### Note

The transceiver is held in the universal mounting bracket by two thumbscrews which allow for adjustment at a convenient angle.

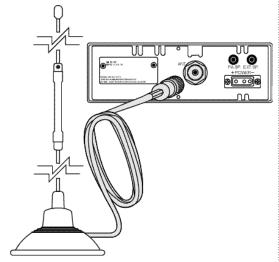

The bracket includes two selftapping screws and star washers. The mounting must be mechanically strong and conveniently located.

### **Mounting and Connection**

• Hold the radio with the mounting bracket in the exact desired location. If there is no interference, remove the bracket and use it as a template to mark the location for the mounting screws.

2 Drill the holes and secure the bracket.

**3** Connect the antenna cable plug to the receptacle marked "ANT" on the back of the unit.

continued

## **Installation Installation**

#### Note

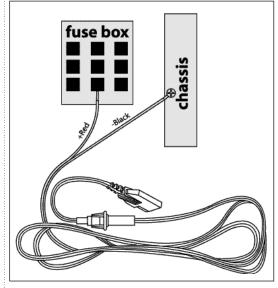

Before installing the CB radio, visually check the vehicle's battery connection to determine which terminal, positive or negative, is earthed to the engine block (or chassis). A negatively earthed vehicle has its negative lead earthed to the chassis.

#### Note

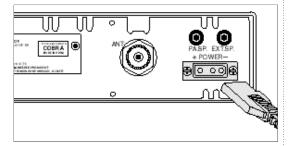

Connecting to a fuse circuit controlled by the ignition switch prevents the unit from being left on accidentally, and also permits operating the unit without running the engine.

#### Note

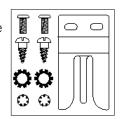

In positive earth vehicles the red wire goes to the chassis and the black wire is connected to the ignition switch.

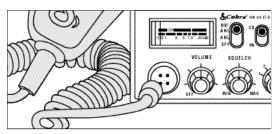

- In a negative earthed vehicle, connect the red lead of the DC power cord to an accessory 12 volt fuse.
- Connect the black lead to the negative side of the vehicle. This is usually the chassis. Any convenient location with a good electrical contact (remove paint) may be used.

- Plug power cable into back of unit marked "Power". Be sure to observe polarity markings.
- Mount the microphone bracket on the side of the unit (nearer the driver) using two screws supplied. Bracket should be placed under the dash so that microphone is readily accessible.

Attach the 4-pin microphone cable to receptacle on front of unit and Install unit in bracket securely.

### Antennas

## Ignition Noise Interference

#### CB Antenna

#### Note

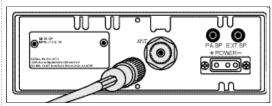

For optimum performance in passenger cars the ideal antenna location is on the centre of the roof. Second choice is on the centre of the boot.

#### Note

Antenna bracket must be earthed to the chassis of the vehicle.

#### **CB Antenna**

The antenna is critical in affecting transmission distance. Only a properly matched antenna system will allow maximum power output. Cobra loaded type antenna models are highly recommended for most installations.

 A standard antenna connector is provided on the transceiver for easy connection. Use of a mobile receiver at low signal levels is normally limited by the presence of electrical noise. The primary source of noise in cars is from the alternator and the ignition system. Typically, when signal level is adequate, the background noise does not present a serious problem. Also, when extremely low-level signals are being received, the transceiver may be operated with the vehicle's engine turned off. The unit requires very little current and therefore will not significantly discharge the vehicle's battery.

Even though the Cobra UK 25 LTD ST has an automatic noise limiter, in some installations ignition interference may be high enough to make good communications impossible. Many possibilities exist and variations between vehicles require different solutions. Consult your COBRA dealer or a 2-way radio technician for help in locating the source of a severe noise.

#### **Marine Installation**

The transceiver will not operate at maximum efficiency in a boat without an earth plate, (unless it has a steel hull). Before attempting installation, consult your dealer for information regarding an adequate earthing system and prevention of electrolysis between fittings in the hull and water.

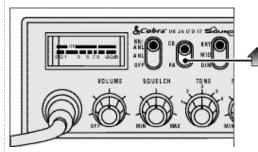

## Operation

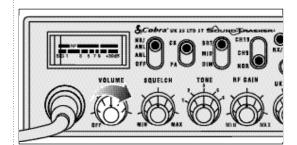

### **Turning On**

### **Turning On**

Make sure the power cord, antenna and microphone are connected to their proper connectors before starting.

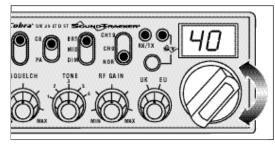

• The CB/PA button should be in the CB position.

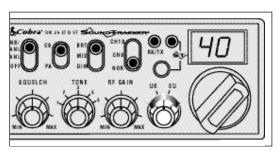

2 Rotate the On/Off Volume knob clockwise to a normal listening level.

### **Setting Channel Selector**

Select one of forty channels and adjust volume. The selected channel is indicated by the LED readout directly above the channel selector knob

### **Setting Band Mode Selector**

1 To operate in UK band, set control to UK, to operate in EU band, set to EU.

# Setting Channel Selector

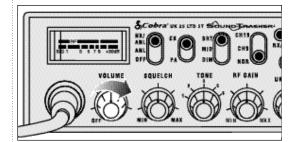

Setting Band Mode Selector

8

## Operation

### To Receive

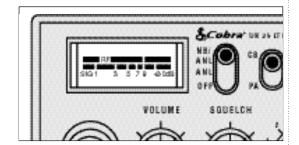

#### To Receive

Rotate the On/Off Volume knob *clockwise.*The green RT/TX LED will be illuminated.

#### S-Meter

Swings proportionately to strength of incoming signal when receiving.

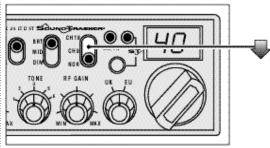

### S-Meter

# Selecting A Channel

#### Note

Switch to 9 or 19 (Information) for instant access to these channels.

### **Selecting A Channel**

• Switch to NOR to select desired channel.

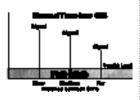

## Operation

#### Note

SoundTracker™ gives you clearer, cleaner reception to improve CB communications while on the air.

#### The SoundTracker™ System

While previous systems only "blanket out" or limit noise in higher sound frequencies, the revolutionary new SoundTracker™ System actually reduces noise while leaving the signal intact in the reception mode. In the transmission mode, it actually strengthens the signal, providing you with a significant reduction in noise on reception and transmission.

Sound clarity is measured by the ratio of the signal level to the noise level. The higher the signal-to-noise ratio, the better the sound.

#### How SoundTracker™ Works

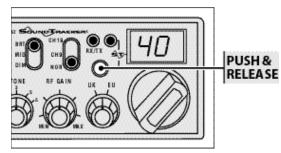

On Reception - "Cuts noise coming in"

With a normal CB, distant signals fall below the squelch level and are unintelligible. With a SoundTracker™ CB, the noise level is cut by up to 90%,which increases the signal-to-noise ratio and dramatically improves signal clarity. This also allows you to reduce the squelch level significantly, which greatly expands your listening range.

On Transmission - "Strengthens signals going out"

A SoundTracker  $^{\mathbb{T}}$  CB strengthens the transmit signal by more effectively using the available RF power output of the CB. The result is improved transmission signal clarity and an expanded transmission range.

### Activating SoundTracker™

Push and release the ST button. Red LED is illuminated when SoundTracker™ is turned on.

# $\begin{array}{c} \textbf{Activating} \\ \textbf{SoundTracker}^{^{\text{\tiny TM}}} \end{array}$

transmissio

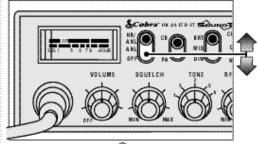

## Operation

NB/ANL, ANL, OFF (Noise Blanker, Automatic Noise Limiter Switch

#### Note

The RF noise blanker is very effective in reducing repetitive noises such as ignition interference.

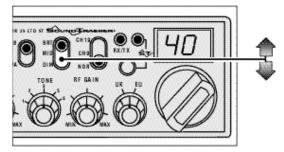

#### NB/ANL, ANL, Off Switch

- When switched to NB/ANL position the RF Noise Blanker and Automatic Noise Limiter is activated, providing increased noise filtration.
- 2 When switched to the ANL the Automatic Noise Limiter is activated. This helps reduce noise created by the vehicle's electronics.

When switched to OFF position Noise Blanking and the Automatic Noise Limiting Filtration will be turned off.

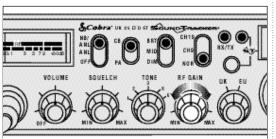

### Bright/Mid/Dim Switch

• Switch to BRT, MID or DIM to control brightness of the channel indicator and multi-function meter for day or nighttime driving.

#### **RF Gain Control**

The RF Gain is used to optimize reception in strong or weak signal areas.

• Rotate the RF Gain knob anticlockwise to reduce gain in strong signal areas. In weak signal areas turn clockwise to increase gain.

### Bright/Mid/Dim Switch

**RF Gain Control** 

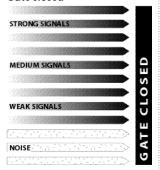

#### Note

The RF Gain is used to optimize reception in weak signal areas.

## Operation

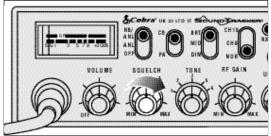

### **Setting Squelch**

#### Gate closed

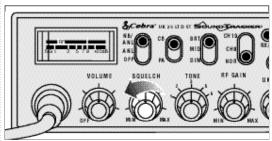

### **Setting Squelch**

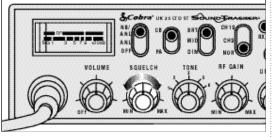

Squelch is the "control gate" for incoming signals.

• Full clockwise rotation closes the "gate" allowing only very strong signals to enter.

2 Full anticlockwise rotation opens the "gate" allowing all signals in.

## Operation

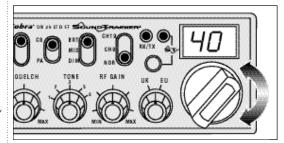

### To Transmit

### ıtion!

#### Caution!

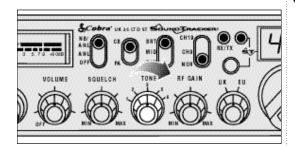

Be sure the antenna is properly connected to the radio before transmitting. Prolonged transmitting without an antenna, or with a poorly matched antenna, can cause damage to the transmitter.

#### To Transmit

**1** Select desired channel.

### **Setting Tone Control**

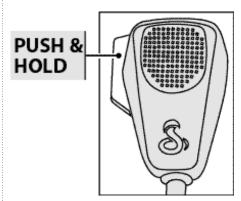

1 Tone Control is used to set the desirable tone level of received audio signals.

### Setting Tone Control

## Operation

### **Transmit**

#### **Transmit**

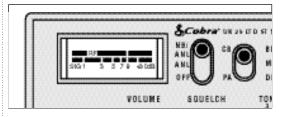

• Push and hold microphone button to transmit. Transmitter is now activated. When transmitting, hold the microphone two inches from your mouth and speak in a clear, normal voice. Release to receive.

### RF Meter

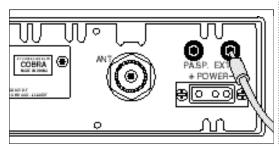

#### **RF Meter**

This meter swings proportionately to the RF output (outgoing signal) while transmitting.

### **External Speaker**

The external Speaker jack is used for remote receiver monitoring.

• Connect an external speaker to the external speaker jack on the rear panel.

### **External Speaker**

#### Note

The external speaker should have 8-ohm impedance and be rated to handle at least 4 watts. When the external speaker is plugged in,the internal speaker is automatically disconnected.

#### Note

Cobra external speakers are rated at 10 watts.

## Operation

# PA (Public Address)

#### Note

Speaker should have 8-ohm impedance and be rated to handle at least 4 watts.

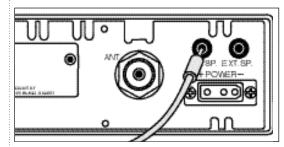

#### Note

The speaker should be directed away from the microphone to prevent acoustic feedback.

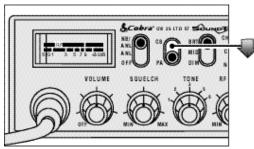

#### Note

Adjust volume control to normal listening level. Activity on the CB channel will be heard through the PA speaker.

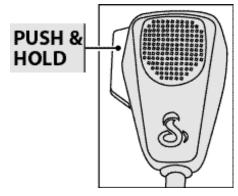

### PA (Public Address)

• Connect an external PA speaker to the PA jack on the rear panel.

2 Set CB/PA switch to PA position.

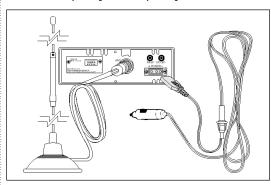

**3** Push and hold microphone button and speak in a normal voice. Your voice will sound on the PA speaker.

## Temporary Mobile Set-Up

### Temporary Mobile Set-Up

### **Temporary Mobile Operation**

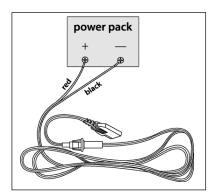

For temporary mobile operation you may want to purchase an optional cigarette lighter adapter from your COBRA dealer. This adapter and a magnetic mount antenna allow you to "install" your transceiver quickly for temporary use.

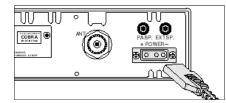

## Home And Office Set-Up

# Base Station Operation (From 220/240V AC Domestic Current)

To operate your transceiver from home or office you will need a 13.8 volt DC Power Pack rated at a minimum of 2 amps, and a properly installed base station antenna.

Connect the red (+) and black (-) leads of the transceiver to the corresponding terminals of the power pack.

- 2 Plug power cable into back of unit marked "Power". Be sure to observe polarity markings.
- 3 Connect properly installed and matched base station antenna.

Base Station Operation (From 220/240V AC Domestic Current)

Do not attempt to operate this transceiver by connecting it directly to 220/240 V AC.

### How Your CB Can Serve You

### How Your CB Can Serve You

- · Warn of traffic delays ahead
- · Provide weather and road information
- · Provide help in an emergency
- Provide direct contact (subject to conditions) with home or office
- · Get local information to find destination
- · Let you communicate with family and friends
- · Suggest spots to eat and sleep
- · Keep you alert while travelling

#### A Few Rules You Should Know

- A. Conversations should not last more than 5 minutes with another station. A one minute break should be taken to let others use the channel.
- B. You should not blast others off the air by use of illegally amplified transmitters or illegally high antennas.
- You should not use the CB to promote illegal activities.
- D. Bad language should not be used.
- E. You should not transmit music with a CB.
- F. You should not use your CB to sell merchandise or professional services.

### **Local Laws or Regulations**

The use of this CB product involves the public airways and its use may be subject to local laws or regulations. Before using the product you should check to see that the contemplated use does not violate any applicable local law or regulation.

## How Your CB Can Serve You

#### CB 10-Codes

#### **CB 10-Codes**

Citizen Bands have adopted the "10-CODES" for standard questions and answers. These codes provide quick and easy communication, especially in noisy areas. Following are some of the more common codes and meanings:

continuit codes and meanings.				
Code	Meaning			
10-1	Receiving poorly			
10-2	Receiving well			
10-3	Stop transmitting			
10-4	OK,message received			
10-5	Relay message			
10-6	Busy, stand by			
10-7	Out of service, leaving air			
10-8	In service, subject to call			
10-9	Repeat message			
10-10	Transmission completed, standing by			
10-11	Talking too rapidly			
10-12	Visitors present			
10-13	Advise weather/road conditions			
10-16	Make pick-up at			
10-17	Urgent business			
10-18	Anything for us?			
10-19	Return to base			
10-20	My location is			
10-21	Call by phone			
10-22	Report in person to			
10-23	Stand by			
10-24	Completed last assignment			
10-25	Can you contact			
10-26	Disregard last information			
10-27	Moving to channel			
10-28	Identify your station			

#### Code Meaning 10-29 Time is up for contact 10-30 Does not conform Emergency traffic 10-33 10-34 Trouble at this station 10-35 Confidential information Correct time is 10-36 Breakdown truck needed at 10-37 Ambulance needed 10-38 Message delivered 10-39 Turn to channel 10-41 Traffic accident at 10-42 10-43 Traffic delay at Have a message for 10-45 All units within range please report 10-50 Break channel 10-60 What is next message number? Unable to copy. Use phone 10-62 Net directed to 10-63 10-64 Net clear Awaiting your next message/assignment 10-67 All units comply 10-70 Fire at Proceed, transmission in sequence 10-71 10-77 Negative contact Reserve hotel room for 10-82 Reserve room for 10-85 My address is 10-91 Talk closer to mic Check my frequency on this channel 10-93 Give me a long count Mission completed, all units secure 10-200 Police needed at

## **Frequency Ranges**

## **UK 25 LTD ST Specifications**

The COBRA UK 25 LTD ST transceiver represents one of the most advanced FM two-way radios. This unit features advanced Phase Lock Loop (PLL) circuitry providing complete coverage of all 40 CEPT and UK FM CB channels.

"Ingenious Products for Easier Communication."

## Our Thanks to You

Thank you for purchasing the Cobra UK 25 LTD ST CB Radio. Properly used, this Cobra product will give you many years of reliable service.

#### SoundTracker™

"Cuts noise coming in...strengthens signals going out."

This patent-pending technology dramatically improves transmission and reception of CB signals.

The revolutionary SoundTracker™ System reconfigures the transmission signal, allowing it to be transferred more efficiently through cluttered airwaves.

At the same time, it significantly reduces the amount of static on all incoming CB signals.

The end result is a cleaner, clearer reception of signals and a more powerful transmission which dramatically improve CB communications.
