INTRODUCTION
A wide variety of optional NiCd rechargeable battery packs is available for ICOM's line of advanced handheld transceivers.

For maximum performance with your transceiver using these battery packs, please read these instructions thoroughly.

BATTERY PACK NOTE:
The full charge capacity of NiCd batteries may be reduced if repeatedly charged with only partial discharge periods. This is called the Battery Memory Effect. If the battery capacity seems lower than when new, discharge the battery pack completely through normal use, then charge fully using the proper charger.

PRE-CAUTIONS
1. NEVER throw a battery pack into a fire since internal battery gas could cause an explosion.
2. NEVER put the battery pack in water. If the battery pack is wet, be sure to wipe it dry.
3. NEVER short the terminals on the top panel of the battery pack. Use the plastic insulator strip provided to prevent this when the battery pack is not attached to the transceiver.
4. NEVER replace the battery cells. NiCd battery packs can normally be recharged about 300 times. After this, a new battery pack must be purchased. (The batteries in BP-4 are replaceable.)
5. NEVER charge a battery pack from more than one power source.
6. DO NOT charge with battery chargers that are not recommended. Use the proper charger for each battery pack.
7. AVOID continuous charging after full charging. If excessive charging is repeated, efficiency of the battery pack is reduced.
8. AVOID charging for more than the specified periods shown in the table.

BATTERY CASE INSTRUCTIONS
1. Push and hold the sides of the BP-4 BATTERY CASE and push down on the top aluminum panel. (Fig. 1)

2. Load the batteries and slide the battery holder into the battery case. (Fig. 2)

CHARGING OPERATIONS
1. Newly purchased battery packs, or those that have not been recharged for two months or longer, should be fully charged for optimum life and operation.
2. Connect the appropriate charger to the battery pack, or insert the battery pack in a drop-in type charger as shown in Fig. 3.
3. The BATTERY CHARGE INDICATOR lights up while charging unless a drop-in type AC BATTERY CHARGER is used.
