*Figure not approximate. **RF output power in DC-IN mode: Factory preset is 5W but for safety reasons, when the receiver is using an external power source in the high-power 430MHz range mode, it will automatically switch to 0.5W (approx.) if temperature in the main unit increases. The time for automatic switchover will vary according to ambient temperature; however, it should normally take approximately two to five minutes in continuous operation. For continuous operation, it is highly recommended that LOW power (approx. 2W) be used. *Specifications are guaranteed for amateur bands only.
