FIRST APPLYING POWER

The IC-2SAT/SET includes NiCd batteries and a rechargeable backup battery. If the batteries are low at the time you purchase the IC-2SAT/SET, the transceiver may not operate properly.

If the transceiver malfunctions, reset it as follows:

1) Connect the supplied wall charger to the [DC 13.8 V] jack on the top panel.

2) While pushing [F] and [A] (CLR), rotate [PWR/VOL] to turn ON power.

3) Release the switches.
   - The function display shows:
     U.S.A., Asia versions 146.01 MHz
     Other versions 145.00 MHz

4) Turn OFF power, then wait until the battery pack is fully charged.

The internal batteries should be fully charged before using the transceiver.

IMPORTANT

READ ALL INSTRUCTIONS carefully and completely before using the transceiver.

SAVE THIS INSTRUCTION MANUAL — This instruction manual contains important safety and operating instructions for the IC-2SAT/SET.

The use of non-Icom battery packs/chargers may impair transceiver performance and invalidate the warranty.

OPERATING NOTES

BE CAREFUL! When transmitting for a long time with high output power, the rear panel may become hot.

When using the transceiver with the internal battery, we recommend operating with low output power. Battery power will be discharged quickly if the transceiver is operated continuously using high output power.

CAUTIONS

NEVER connect the transceiver via the [DC 13.8 V] jack to an AC outlet or to a power source of more than 16 V DC. These connections will ruin the transceiver.

NEVER connect the transceiver to a power source using reverse polarity. This connection will harm internal transceiver circuitry.

NEVER allow children to touch the transceiver.

NEVER use a non-recommended charger for charging. Suggested chargers are described on p. 5.

AVOID using or placing the transceiver in areas with temperatures below −10°C (+14°F) or above +60°C (+140°F).

AVOID placing the transceiver in direct sunlight.
FOREWORD

Thank you for purchasing the IC-2SAT/SET 144 MHz FM TRANSCEIVER. The IC-2SAT/SET is state-of-the-art handheld that fits comfortably in the palm of your hand and combines ease of use with multi-operational capability.

Features include keyboard selection, 5 W output power, a power saver function, auto power off, power on timer, built-in clock, 48 memory channels, 10 DTMF memory channels, priority watch, convenient scan functions, etc. In fact, the IC-2SAT/SET has just about everything you could ask of a transceiver. And all these functions are built into a small handheld designed for very easy operation.

To fully appreciate the capabilities of your new IC-2SAT/SET please read this instruction manual thoroughly before attempting operation. If you have any questions regarding the operation of the IC-2SAT/SET, feel free to contact your nearest authorized Icom Dealer or Service Center.

UNPACKING

* BC-74A for U.S.A. version
  BC-74V for Australia version
  BC-73D for Europe and Italy versions
  BC-73E for Asia version
FEATURES

SLIM AND UNBELIEVABLY COMPACT
Transceiver dimensions are just 49 mm (1.9'')W x 103 mm (4.1'')H x 35 mm (1.4'')D. And these dimensions include the internal battery! What's more, the rounded body design gives you a feeling of even smaller transceiver dimensions.

CONVENIENT FREQUENCY SELECTION
With the IC-2SAT/SET you can immediately select a desired operating frequency using keyboard entry or by rotating the tuning control.

EXTERNAL DC POWER JACK
Another Icom innovation. Even though the IC-2SAT/SET is incredibly small, we've equipped it with an external DC power jack. Operate the transceiver with either the internal battery, an external battery pack (optional) or an external power source such as a power supply, cigarette lighter socket in a vehicle, etc. No optional DC-DC converter is necessary. And battery charging can also be performed via this jack.

AUTO POWER OFF AND POWER SAVER FUNCTIONS
The IC-2SAT/SET has an advanced power saver design for conserving battery pack power. When no signal is received or no switch is pushed for 5 seconds, the power saver function reduces current consumption to approx. 1/4. And after 60 minutes*, power is automatically turned OFF by the auto power off function.
* Selectable in 3 steps: 20, 40 and 60 min.

10 DTMF MEMORY CHANNELS
The transceiver has 10 DTMF memory channels which memorize a DTMF code of up to 15 digits. Now there's no need for you to remember each DTMF code when accessing repeaters, using telephone lines, etc.

ADDITIONAL FEATURES
• 48 memory channels with masking function.
• 3 scan types: programmed, full and memory scans.
• Frequency skip and memory channel skip functions.
• Priority watch to check a particular frequency.
• Built-in clock and power on timer.
• Optional paging and code squelch functions.
• Dial select function for quick tuning selection.
2-1 Attaching accessories

**ANTENNA AND RAINPROOF CAP**
Attach the rainproof cap before connecting the antenna when desired.
Insert the supplied antenna onto the antenna connector and twist the connector on the antenna as shown in the diagram at left.

**HANDSTRAP ATTACHMENT**
The handstrap allows you to easily carry the transceiver. Attach the handstrap as shown in the diagram at left.

**BELT CLIP**
The belt clip allows you to attach the transceiver to your belt.
Remove the plastic screws when attaching the belt clip.

**BOTTOM CAP REMOVAL**
Push the bottom cap release button upwards, then slide the bottom cap to the right with the transceiver facing you.
To attach the bottom cap or an optional battery pack, mate the notched ends of the transceiver and bottom cap (or a battery pack) and slide until a click sound is heard.
2-2 Power requirement

(1) POWER SOURCE

Use any of the following power sources when operating your IC-2SAT/SET:
- Internal battery.
- 6 ~ 16 V DC external power source through the [DC 13.8 V] jack.
- Either optional battery packs BP-81 ~ BP-85 or six AA (R6) size dry batteries or NiCd batteries with an optional BP-90 BATTERY CASE.

When attaching a battery pack or connecting an external power source, the internal battery is disconnected from the circuitry.

When the attached battery pack is discharged remove it and use the internal battery.

(2) CHARGING THE INTERNAL BATTERY

To charge the internal battery, connect the supplied wall charger to the [DC 13.8 V] jack on the transceiver, or use an optional BC-72 DESKTOP CHARGER.* The BC-72 allows rapid charging.

*An optional BA-12 BATTERY CHARGE ADAPTER is necessary when charging with the BC-72.

CHARGING CONNECTION

Supplied wall charger

Approx. 15 hrs. for charging

Optional chargers

To cigarette lighter socket

CP-12

white +

black -

To external power supply

BC-72

USE ONLY one charger.
(3) CHARGING AN OPTIONAL BATTERY PACK

An optional battery pack can be charged in a similar way as the internal battery.

The internal battery will not be charged when an external battery pack is connected.

(4) USING THE BATTERY PACK WISELY

The battery pack is designed to withstand recharging periods longer than 1 week or more and can be fully discharged. However, overcharging or complete discharging shorten the life of a battery. The battery pack can be recharged about 300 times but its battery life can be lengthened to about 500 times as follows:

1. Avoid overcharging. Charging times should be less than 48 hours.
2. Use battery capacity almost completely. We recommend battery charging after transmitting becomes impossible.

(5) BATTERY LIFE

The battery packs below have the following operating times when transmitting at high power for 1 min., receiving for 1 min. and standby for 8 min.

<table>
<thead>
<tr>
<th>BATTERY PACK</th>
<th>VOLTAGE</th>
<th>OPERATING TIME</th>
</tr>
</thead>
<tbody>
<tr>
<td>INTERNAL BATTERY</td>
<td>7.2 V</td>
<td>Approx. 2.5 hrs.</td>
</tr>
<tr>

</tbody>
</table>

The transceiver has 5 different modes and 1 call channel for versatile, multi-function operations.
3-2 Mode construction chart

MEMORY MODE (p. 19)

VFO MODE (p. 14)

CALL CHANNEL (p. 22)

SET MODE

Offset frequency (p. 18)

Subaudible tone frequency (optional)

Tuning step (p. 15)

Scan skip function (p. 25)

Programmed scan edge (p. 25)

Beep tone ON/OFF (p. 33)

Programmed scan edge (p. 25)
4-1 Switches and controls

1. **ANTENNA CONNECTOR**
   Connects the supplied flexible antenna. (p. 4)

2. **EXTERNAL DC POWER JACK [DC 13.8 V]**
   Connects the supplied wall charger for charging the internal or attached battery pack.

   Allows operation with a 13.8 V DC power source using optional cables CP-12 or OPC-254 (see attached “List of options” for details).

   The wall charger cannot be used to operate the transceiver.

3. **EXTERNAL SPEAKER AND MICROPHONE JACKS [SP] / [MIC]**
   Connect an optional speaker-microphone or headset, if desired (see attached “List of options” for details).

   The internal speaker and microphone will not function when either option is connected.

4. **TUNING CONTROL**
   Sets an operating frequency or a memory channel.

5. **TRANSMIT/RECEIVE INDICATOR**
   Lights up in green when squelch opens; lights up in red when transmitting.

   Green lighting can be turned OFF for power saving, when required. (p. 16)
TRANSMIT POWER SWITCH [H/L/DTMF]
Selects high or low transmit output power. (p. 16)
While pushing this switch and rotating the tuning control, the low output power level changes. (p. 17)
While pushing [F], push this switch to enter DTMF MEMORY mode. (p. 29)

MONITOR SWITCH [MONI]
Opens the squelch and optional tone squelch. (p. 16)
Checks the transmit frequency when duplex is selected. (p. 17)
While pushing [F], push this switch to turn OFF the green receive indicator. This function conserves battery pack power. (p. 16)

LIGHT SWITCH [LIGHT]
Lights the display backlight for approx. 5 sec.
While pushing [F], push this switch for continuous lighting. To turn OFF, push this switch again.
While pushing this switch together with some digit keys, turn power ON to initialize the scan resume condition (p. 25), power saver duty cycle (p. 33) or PTT switch function. (p. 17)

SQUELCH CONTROL [SQUELCH]
Varies the squelch threshold point for audio mute.

VOLUME CONTROL [PWR/VOL]
Turns power ON and adjusts the audio level.

FUNCTION SWITCH [F]
While pushing this switch, other switches function as a secondary function.

PTT SWITCH [PTT]
Push and hold to transmit; release to receive.

BATTERY PACK RELEASE BUTTON
Opens the latch for bottom cap removal when pushed upwards. (p. 4)
### 4-2 Keyboard

4 PANEL DESCRIPTION

4-3 Function display

1. FUNCTION INDICATOR
   Appears while pushing [F].

2. LOCK INDICATOR
   Appears when the lock function is activated. (p. 15)

3. DUPLEX INDICATOR
   "DUP" or "−DUP" appears when duplex is selected. (p. 17).

4. TONE INDICATOR
   Appears when operating the subaudible tone encoder or tone squelch function. (an optional UT-50 or UT-51, see "List of options," is necessary.) (pgs. 40, 41)

5. CODE SQUELCH AND PAGER INDICATORS
   Either indicator appears when operating the code squelch or pager function. (an optional UT-49, see "List of options," is necessary.)

6. SKIP INDICATOR
   Appears when selecting the memory channel programmed as the skip channel. (p. 26)
   Blinks during full scan or programmed scan. (p. 24)

7. MEMORY INDICATOR
   Appears when selecting MEMORY mode. (p. 19)
   Blinks during memory scan. (p. 24)

8. MEMORY CHANNEL READOUT
   Shows the selected memory channel number.
   "C" appears when calling up the call channel. (p. 22)

9. S/RF INDICATOR
   Shows the relative signal strength when receiving, and the output power selection when transmitting. (p. 16)

10. LOW POWER INDICATOR
    Appears when selecting low output power. (p. 16)

11. PRIORITY INDICATOR
    Appears when activating the priority watch. (p. 27)

12. DIAL SELECT INDICATORS
    One indicator appears while pushing [F]. It shows the dial select step. (p. 15)

13. FREQUENCY READOUT
    Shows an operating frequency.
5-1 Setting a frequency

Before applying power, see the inside front cover to reset the transceiver.

(1) USING THE TUNING CONTROL
1) Rotate [PWR/VOL] to turn power ON.
2) Push [A] (CLR) to select VFO mode.
3) Rotate the tuning control to set an operating frequency.
4) Use the dial select function for quick tuning:
   - While pushing [F], rotate the tuning control.
   - See p. 15 for changing the dial select step.

(2) USING THE KEYBOARD
1) Turn power ON. See steps 1 and 2 at left.

2) Push the appropriate digit key to input the frequency.
   - When the wrong digit is input, push [A] (CLR) to clear the input.
   - A decimal point appears when the input frequency is entered.

3) To change the frequency in the tuning step, push [*] (▼) or [#] (▲).
   - Pushing [*] or [#] for more than 0.5 sec. starts full scan.

EXAMPLE: Setting frequency at 145.50 MHz using the keyboard.

<table>
<thead>

<td>145.00</td>
<td>145</td>
<td>1455</td>
<td>14550</td>
</tr>
</tbody>
</table>
(3) SETTING A TUNING OR DIAL SELECT STEP

**USING SET MODE**

**SETTING A TUNING STEP**

The display shows the tuning step for 25 kHz.

1) Push [A] (CLR) to select VFO mode.

2) While pushing [F], push [B] (SET) to enter SET mode.
   * Refer to p. 8 for SET mode details.

3) Push [*] (▼) or [#] (△) until "TS" appears as shown above.

4) Rotate the tuning control to select the desired tuning step.

5) Push [A] (CLR) to exit SET mode.

(4) LOCK FUNCTION

The lock function electronically locks the tuning control and keyboard to prevent the frequency from changing accidentally.

1) While pushing [F], push [D] (CALL/LOCK) to turn ON the lock function.

2) Repeat step 1 to turn OFF the function.
5-2 Receiving

1) Set [SQUELCH] to maximum counterclockwise.

2) Rotate [PWR/VOL] to turn ON power and adjust the audio level.

3) Rotate [SQUELCH] clockwise until the noise disappears.

4) Set the operating frequency using the tuning control or keyboard.
   - Refer to p. 14 for details.

5) When receiving a signal on the set frequency:
   - Squelch opens and the transceiver emits audio.
   - The S/RF indicator shows relative signal strength.

6) Use [MONI] when a weak signal cannot open the squelch completely.

   The receive indicator lights when the squelch opens. However, it can be turned OFF to conserve battery pack power.

   - While pushing [F], push [MONI] to turn the indicator OFF or ON.

5-3 Transmitting

**CAUTION:** Transmitting without an antenna may damage the transceiver.

**NOTE:** To prevent interference, listen on the frequency before transmitting using [MONI].

1) Set the operating frequency using the tuning control or keyboard.
   - Refer to p. 14 for details.

2) Push [H/L] to select the output power.
   - "LOW" appears when selecting low power and disappears when selecting high power.
   - The low output power level can be changed. (p. 17)

3) Push and hold [PTT] to transmit.
   - The [TX] indicator lights up in red.
   - The S/RF indicator shows output power selection.

4) Speak into the microphone using your normal voice level.
   - **DO NOT** hold the transceiver too closely to your mouth or speak too loudly. This may distort the signal.

5) Release [PTT] to receive.
5 BASIC OPERATION

SELECTING LOW OUTPUT POWER

Low output power can be selected in 3 levels to suit operating requirements such as communication distance, battery conservation, etc.

<table>
<thead>
<tr>
<th>POWER SELECTION</th>

</tr>
</tbody>
</table>

Using 13.8 V DC Using the internal battery

Above values are typical.

While pushing [H/L], rotate the tuning control.
- The S/RF indicator shows output power selection as described above.

5-4 Repeater operation

When operating the transceiver with a station through a repeater, the repeater transmits your signal, allowing you to communicate with long distance stations even when low output power is used.

1) Set the operating frequency using the tuning control or keyboard.
   - Refer to p. 14 for details.

2) While pushing [F], push [4] (DUP) for —duplex and again for +duplex.
   - “—DUP” or “DUP” appears.
   - “—DUP”: Transmit freq. = Receive freq.  —Offset freq.

3) Push and hold [PTT] to transmit.
   - The displayed frequency automatically changes to the repeater input frequency.
   - See right (p. 18) when tones are necessary to operate a repeater.

4) Release [PTT] to receive.

5) Push [MONI] to check the repeater input frequency whether the frequency is busy or not.
SUBAUDIBLE TONE ENCODER
(An optional UT-50 or UT-51 is necessary)

"T" appears
While pushing [F], push [1] (T/T SQL) until "T" appears.
To set a subaudible tone frequency, see p. 41

DTMF TONES
While pushing [PTT], push the desired digit key to transmit DTMF tones.
The transceiver has 10 DTMF memory channels. Each memory has the capability to memorize up to 15 DTMF digits. See p. 29 for details.

1750 Hz TONE CALL
(IC-2SET only)
Quickly push [PTT] 2 times and briefly hold [PTT] down (second push).
Release and then push [PTT] again to transmit your voice.
- Some repeaters require a period of less than 0.5 sec. between second push and voice transmission of pushing [PTT].

OFFSET FREQUENCY SETTING
The display shows the offset frequency for 600 kHz (0.6 MHz).

1) Push [A] (CLR) to select VFO mode.
2) While pushing [F], push [8] (SET) to enter SET mode.
   - Refer to p. 8 for SET mode details.
3) Push [*] (▼) or [#] (▲) until "OW" appears as shown above.
4) Set the desired offset frequency using the tuning control.
5) Push [A] (CLR) to exit SET mode.
6-1 Selecting a memory channel

The transceiver has 48 memory channels for storing your most-often-used frequencies such as for use with repeaters, group calls, etc.

When first applying power or after resetting, memory channels 10  47 are blank.

(1) USING THE TUNING CONTROL

1) Push [B] (MR) to select MEMORY mode.  
   • "MR" appears.

2) Rotate the tuning control to select the desired memory channel.

   NOTE: Only programmed channels can be selected.

3) To select a blanked memory channel:
   • While pushing [F], rotate the tuning control.

4) Push [A] (CLR) to return to VFO mode.

The dial select function is helpful for selecting a memory channel number in VFO mode. See p. 15 for setting the dial select step for a memory channel.
2) USING THE KEYBOARD

1) Push [B] (MR) several times to select the desired 10-digit memory channels.

2) Push the appropriate digit key to select the memory channel.
   • Pushing [*] (▼) and [#] (△) also allows you to select memory channels.

3) Push [A] (CLR) to return to VFO mode.

6-2 Writing a memory

1) Select the memory channel to be programmed.
   • See Section 6-1 for details.

2) Push [A] (CLR) to select VFO mode.

3) Set the frequency (and duplex when required).

4) While pushing [F], push and hold [B] (MR/MW) until the transceiver emits 3 beeps.

5) The memory has been written into the memory channel.
   To check the contents, push [B] (MR).

**EXAMPLE:** Selecting memory channel 35 using the keyboard.

<table>
<thead>
<tr>
<th>Push keys</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>MR/MW B</td>
<td>145.50</td>
</tr>
<tr>
<td>MR/MW B</td>
<td>145.00</td>
</tr>
<tr>
<td>.</td>
<td>10</td>
</tr>
<tr>
<td>.</td>
<td>30</td>
</tr>
<tr>
<td>CODE 5</td>
<td>145.90</td>
</tr>
</tbody>
</table>

**EXAMPLE:** Writing 145.57 MHz into memory channel 40.

<table>
<thead>
<tr>
<th>Push keys</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>MR/MW</td>
<td>145.50 35</td>
</tr>
<tr>

<td>145.57</td>
<td>145.57</td>
</tr>
</tbody>
</table>
6 MEMORY OPERATION

6-3 Transferring a memory

Copy and transfer the displayed memory contents into the VFO. This function is useful for searching for signals around the memory frequency and for recalling the offset frequency which is independently programmed in memory channels 0 ~ 9.

1) Push [B] (MR) to select MEMORY mode.

2) Select the memory channel to be transferred:
   - Rotate the tuning control or push [B] several times then push a digit key.

3) While pushing [F], push and hold [A] (CLR/M►V) until the transceiver emits 3 beeps.
   - The memory contents are transferred into the VFO.
   - The transceiver returns to VFO mode.

6-4 Masking a memory

Unwanted memory channels can be masked (made blank). A masked memory channel cannot be selected for normal use. The contents of the masked memory can be recalled.

1) Push [B] (MR) to select MEMORY mode.

2) Select the memory channel in MEMORY mode to be masked:
   - Rotate the tuning control or push [B] several times then push a digit key.

3) While pushing [F], push [6] (MASK) to mask the displayed memory channel.

4) To recall the masked memory channel, repeat step 2.

5) Push [A] (CLR) to return to VFO mode.
CALL CHANNEL OPERATION

7-1 Calling up the call channel

A one-touch access call channel is provided for operation on your most-often-used frequency. The call channel is separate from the memory channels.

1) Push [D] (CALL) to call up the call channel.

2) Push [D] (CALL) again to return to the previous mode.

7-2 Transferring the call channel

1) Push [D] (CALL) to call up the call channel.

2) While pushing [F], push and hold [A] (CLR/MV) to transfer the contents into the VFO.
   • VFO mode is automatically selected.

7-3 Programming the call channel

The call channel contents can be programmed in a similar way as the memory channels.

1) Push [A] (CLR) to select VFO mode.

2) Set the desired frequency (and duplex, when required) to be programmed into the call channel.

3) Push [D] (CALL) to call up the call channel.

4) While pushing [F], push and hold [B] (MR/MW) until the transceiver emits 3 beeps.
   • The displayed frequency is changed to the same as the VFO frequency.
8-1 Scan types

**FULL SCAN**
Repeatedly scans all frequencies in the entire 144 MHz band. The frequency skip function can be used.

**PROGRAMMED SCAN**
Repeatedly scans between two user-programmed frequencies. See p. 24 for scan edge programming. The frequency skip function can be used.

**MEMORY SCAN**
Repeatedly scans all memory channels in sequence. The memory skip function can be used during memory scan.

**SCAN RESUME CONDITION**
2 resume conditions are available: pause and timer scan. When receiving a signal, pause scan pauses until the signal disappears; timer scan pauses for approx. 10 sec.

**FREQUENCY SKIP FUNCTION**
Skips unwanted signals that inconveniently stop scanning. See p. 25 for programming.

**MEMORY SKIP FUNCTION**
Skip unnecessary memory channels, making shorter intervals for memory scanning. See p. 26 for programming.

The IC-2SAT/SET has 3 scan types and 2 skip functions as described below. Perfect for hands-free operation.
8-2 Scan operation

Refer to the following table for any scan operation. However, before operating a scan, rotate the [SQUELCH] control clockwise until audio is muted.

<table>
<thead>
<tr>
<th>SCAN TYPE</th>
<th>PRE-OPERATION</th>
<th>SCAN START</th>
<th>SCAN RESUME CONDITION</th>
<th>SCAN STOP</th>
<th>WHILE SCANNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>FULL SCAN</td>
<td>Push [A] to select VFO mode.</td>
<td>Push and hold [*] or [#] for 1 sec.</td>
<td>• Scan resumes 10 sec. after a signal is received or 2 sec. after a signal resumes.</td>
<td>• Push [*] or [#].</td>
<td>Blinks, blinks when frequency skip is ON.</td>
</tr>
<tr>
<td>PROGRAMMED SCAN</td>
<td>Push [A] to select VFO mode.</td>
<td>While pushing [F]; push [*] or [#].</td>
<td>• Tuning control rotation restarts scan and changes scan direction.</td>
<td>• [A], [B] or [D] also stop the scan, though the operating mode may be changed.</td>
<td>Blink, blinks when frequency skip is ON.</td>
</tr>
<tr>
<td>MEMORY SCAN</td>
<td>Push [B] to select MEMORY mode.</td>
<td>Push and hold [*] or [#] for 1 sec.</td>
<td>• Resume condition can be selected. See p. 25 for details.</td>
<td></td>
<td>Blink</td>
</tr>
</tbody>
</table>
8 SCAN OPERATION

8-3 Setting scan conditions

(1) SETTING THE PROGRAMMED SCAN EDGES

1) Push [A] (CLR) to select VFO mode.

2) While pushing [F], push [8] (SET) to enter SET mode.
   • Refer to p. 8 for SET mode details.

3) Push [*] (▼) or [#] (▲) until “PA” appears as shown above.

4) Set a scan edge frequency using the keyboard or tuning control.

5) Push [#] (▲) (“PB” appears), then set the other scan edge frequency.

6) Push [A] (CLR) to exit SET mode.

(2) SCAN RESUME CONDITION WITH POWER ON

The resume condition can be selected as a pause or timer scan.

- [4] + [LIGHT] : Pause scan
  (Scan pauses until signal disappears.)
- [5] + [LIGHT] : Timer scan
  (Scan pauses for 10 sec.)

(3) FREQUENCY SKIP FUNCTION

1) Start full scan or programmed scan. See Section 8-2 (p. 24).

2) To program the received frequency as a skip frequency:
   - While pushing [F], push and hold [B] (MR/MW) until the transceiver emits 3 beeps.
   • Memory channel number 47 appears for a moment.
   • The channel number decreases when programming the next frequency. Memory channels 47 ~ 10 can be used for programming.
**USING SET MODE**

**FREQUENCY SKIP FUNCTION ON/OFF**

- **ON** “PS”
  - Skip function is ON.

- **OFF** “PS”
  - Skip function is OFF.

1) Push [A] (CLR) to select VFO mode.

2) While pushing [F], push [8] (SET) to enter SET mode.
   - Refer to p. 8 for SET mode details.

3) Push [*] (▼) or [#] (▲) until “PS” appears as shown above.

4) Rotate the tuning control to turn ON or OFF the frequency skip function.

5) Push [A] (CLR) to exit SET mode.

---

(4) PROGRAMMING A MEMORY SKIP CHANNEL

Memory channels not desired can be skipped during memory scan. These skip channels are also skipped during priority watch (memory scan watch) and the frequencies of the channels are skipped during full or programmed scan.

1) Select the memory channel to be programmed as the skip channel:
   - Push [B] (MR) then rotate the tuning control, or push [B] several times then push a digit key.

2) While pushing [F], push [3] (SKIP) to program.
   - “SKIP” appears.

3) Repeat step 2 to delete the skip function from the memory channel.
9-1 Priority watch types

- **VFO ↔ MEMORY CHANNEL**

  While using a VFO frequency, priority watch checks the selected memory channel in 5 sec. intervals.

  Start the watch from MEMORY or VFO mode.

  When the selected memory channel is masked (made blank), the watch does not start.

- **VFO ↔ CALL CHANNEL**

  While using a VFO frequency, priority watch checks the call channel in 5 sec. intervals.

  Start the watch from the call channel.

- **VFO ↔ MEMORY SCAN**

  While using a VFO frequency, priority watch checks each memory channel. You can also program skip channels which will not be watched, making shorter scanning intervals.

  Start the watch during memory scan.
9-2 Priority watch operation

Refer to the following table for any priority watch operation. However, before operating the watch function, rotate [SQUELCH] clockwise until audio is muted.

<table>
<thead>
<tr>
<th>PRIORITY WATCH TYPE</th>
<th>1) PRE-OPERATION</th>
<th>2) START</th>
<th>3) RESUME CONDITION</th>
<th>4) STOP</th>
</tr>
</thead>
<tbody>
<tr>
<td>VFO ↔ MEMORY CHANNEL</td>
<td>1) Set the memory channel to be watched.</td>
<td>While pushing [F], push [7].</td>
<td>Priority watch pauses for 15 sec. when a signal is received on a watching channel or resumes 2 sec. after the signal disappears.</td>
<td>While pushing [F], push [7].</td>
</tr>
<tr>
<td></td>
<td>2) Push [A] to select VFO mode.</td>
<td></td>
<td>• While the watch pauses, pushing [A] resumes watch manually.</td>
<td>[A], [B] or [D] also stops the watch function. However, the mode may be changed.</td>
</tr>
<tr>
<td>VFO ↔ CALL CHANNEL</td>
<td>Push [D] to call up call channel.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>VFO ↔ MEMORY SCAN</td>
<td>1) Push [B] to select MEMORY mode.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>2) Push and hold [*] or [#] to start memory scan.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
10 DTMF MEMORY OPERATION

10-1 Programming a DTMF code

The transceiver has 10 DTMF memory channels for storing your most-often-used DTMF codes of up to 15 digits.

1) While pushing [F], push [H/L/DTMF] to enter DTMF MEMORY mode.

2) Push a digit key to select the desired channel.

3) While pushing [F], push [8] (SET) to program the DTMF memory.
   • Previous programmed digits are erased.

4) Push the appropriate digit keys to input the DTMF code.
   • When 15 digits are input, the transceiver stores the digits automatically.

5) Push [H/L/DTMF] to store the input digits.

6) Push [H/L/DTMF] or [PTT] to exit DTMF MEMORY mode.
   • When [H/L/DTMF] is pushed, the transceiver emits the programmed code.

10-2 Transmitting a DTMF code

1) Select the desired DTMF memory channel:
   - See Section 10-1 steps 1 and 2.

2) Push [PTT] to exit DTMF MEMORY mode.

3) To transmit the DTMF code in the selected channel:
   - While pushing [PTT], push [H/L/DTMF].

EXAMPLE: Programming digits of 1234567890 into DTMF memory channel T7.

\[
\begin{align*}
\text{[F]} + \text{[H/L/DTMF]} & \quad \text{[H/L/DTMF]} \quad \text{[8]} \quad \text{[SET]} \quad \text{[1]} \quad \text{[2]} \quad \text{[3]} \\
144.60 & \quad \text{---} \quad \text{m7} \quad \text{---} \quad \text{m7} \\
\text{[6]} \quad \text{[7]} \quad \text{[8]} \quad \text{[9]} \quad \text{[0]} & \quad \text{[H/L/DTMF]} \quad \text{[H/L/DTMF]} \quad \text{The programmed code is emitted.}
\end{align*}
\]
11-1 Clock mode

The transceiver is equipped with a clock function for operating the power on timer and auto power off timer.

1) While pushing [F], push [9] (CLOCK) to enter CLOCK mode.

2) Push [PTT] to return to the previous mode.

11-2 Setting time

1) While pushing [F], push [9] (CLOCK) to enter CLOCK mode.

2) Push [*] (▼) or [#] (△) to select the clock time display as shown above.

3) While pushing [F], push [8] (SET). The displayed time blinks.

4) Rotate the tuning control to set the hours.

5) Push [*] (▼) or [#] (△), then rotate the tuning control to set the minutes.

6) Push [A] (CLR) to set the time.

7) Push [PTT] to exit CLOCK mode.

TIME ERROR: ±1 min./week
11 CLOCK AND TIMER OPERATION

11-3 Power on timer

The transceiver has a power on timer to fit your schedule and to save battery power. While the timer is activated, the transceiver is in the off condition, the function display shows the clock time and the transmitter and receiver circuits do not operate.

1) While pushing [F], push [9] (CLOCK) to enter CLOCK mode.

2) Set the clock time. See Section 11-2 (p. 30) steps 2 ~ 5.

3) Push [*] (▽) or [#] (△) until “TM” appears as shown above.

4) While pushing [F], push [8] (SET).
   - The displayed time blinks.

5) Rotate the tuning control to set the hours.

6) Push [*] (▽) or [#] (△), then rotate the tuning control to set the minutes.

7) Push [A] (CLR) to set the time.

8) To start the power on timer:
   - While pushing [F], push [A] (CLR).
   - The decimal point appears, indicating the power on timer is activated.
   - DO NOT turn OFF the power with the [PWR/VOL] control.

To turn ON the transceiver while in the off condition, turn OFF then ON again using the [PWR/VOL] control.
11-4 Auto power off

The transceiver automatically turns OFF after the selected time when no switch is pushed.

Time can be set in 20, 40 and 60 min. intervals. The function can also be deactivated using the "OFF" setting.

1) While pushing [F], push [9] (CLOCK) to enter CLOCK mode.

2) Push [+] (▼) or [−] (▲) until "AP" appears as shown above.

3) Rotate the tuning control to set the desired time or function OFF.

4) Push [PTT] to exit CLOCK mode.

To turn ON the transceiver while in the off condition, turn OFF then ON again using the [PWR/VOL] control.
12-1 Beep tone ON/OFF

**Using SET Mode**

The transceiver emits a beep tone each time a switch is pushed. To turn OFF the beep tone, use SET mode.

1) Push [A] (CLR) to set VFO mode.

2) While pushing [F], push [8] (SET) to enter SET mode.
   - Refer to p. 8 for SET mode details.

3) Push [*] (▽) or [#] (△) until “BE” appears as shown above.

4) Rotate the tuning control to select beep “on” or “off.”

5) Push [A] (CLR) to exit SET mode.

12-2 Power saver function

**With POWER ON**

The power saver function reduces the current drain to conserve battery power. The function activates 5 sec. after the squelch closes or no switch is pushed.

A duty cycle of the power saver function (standby : circuit off) can be selected or turned OFF to suit your desired operation.

1) Turn power OFF.

2) While pushing the following switches, turn power ON.

<table>
<thead>
<tr>
<th>SWITCHES</th>
<th>[7] + [LIGHT]</th>
<th>[8] + [LIGHT]</th>
<th>[9] + [LIGHT]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standby</td>
<td></td>
<td>125 msec.</td>
<td>125 msec.</td>
</tr>
<tr>

<tr>
<td></td>
<td>deactivates</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
13-1 Unit installations

(1) DISASSEMBLING THE TRANSCEIVER

1) Turn power OFF, then remove the bottom cap.

2) Unscrew the 5 screws.

3) Open the transceiver.

CAUTION: DO NOT lose the small spring located here.

NOTE: Keep attached to the rear panel.

CAUTION: Flexible cables are fragile and can be damaged by mishandling.

(2) INSTALLATION LOCATIONS

- UT-50 TONE SQUELCH UNIT (ENCODER/DECODER)
- UT-51 PROGRAMMABLE TONE ENCODER
- UT-49 DTMF DECODER

After installing the unit, reassemble the transceiver.
13-2 Pager function

The pager function accesses other stations and displays a code identical to yours using the other station's display. This function can be used for group communications.

The pager function transmits a code with 7 DTMF digits: Transmit code + "*" + your ID code.

An optional UT-49 DTMF DECODER UNIT is necessary for operation.
PRE-OPERATION:

1) Install optional UT-49 units in your group transceivers.

2) Decide the ID code of each transceiver and the group code in your group.

3) Decide whether to return to normal operation or code squelch operation after contact.

4) Program the ID code, group code, and the other station’s ID codes as transmit codes. (p. 37)
   - Your ID code should be programmed into the code memory channel C0.
   - Program "receive inhibit" on channels programmed as transmit codes.

### GROUP CALL

<table>
<thead>
<tr>
<th>Code channel</th>
<th>Programming example</th>

</tbody>
</table>

* Automatically memorizes the ID code of the other station when receiving a call. This memory is kept until the next call is received.

(2) PROGRAMMING A CODE MEMORY

1) While pushing [F], push [5] (CODE) to change the display for code programming.

2) Rotate the tuning control to select the code memory channel to be programmed.

3) Push 3 digit keys to enter the desired code.
   • Channel CP does not accept entry.

4) Push [B] (MR) to select "receive accept" or "receive inhibit."
   • When selecting "receive accept," a dash appears in front of the digit code.
   • Channels C0 and CP do not accept selection.

5) Push [PTT] to return to the previous mode.
(3) PAGER OPERATION

The following operation procedures should be started after completing the steps described in PRE-OPERATION on p. 36.

## PERSONAL CALL

13-3 Code squelch

The code squelch function provides you with "personalized communication" using 3 DTMF digits.

An optional UT-49 DTMF DECODER UNIT is necessary for operation.

1) Decide the ID code on each transceiver and the group code in your group.

2) Program the ID code, group code, and the other station's ID codes as transmit codes. (p. 37)
   - Your ID code should be programmed into code memory channel C0.
   - Program "receive inhibit" on channels programmed with transmit codes.

3) While pushing [F], push [2] (PGR/C-SQL) twice to turn ON the code squelch function.
   - "C-SQL" appears.

4) While pushing [F], push [5] (CODE) to change the display to the code memory channel.

5) Rotate the tuning control to select the desired code channel to be used.
   - For personalized communications:
     - Select the programmed ID code channel of the communicating station.
   - For group communication:
     - Select the programmed group code channel.

6) Push [PTT] to return to the normal display.

7) Operate the transceiver for normal communications.
13 OPTIONAL UNIT OPERATION

13-4 Subaudible tone encoder

When a repeater requires a subaudible tone, an optional UT-50 or UT-51 unit is necessary.

1) While pushing [F], push [1] (T/T SQL).
   • "T" appears on the function display.
   • When the UT-50 is installed, push the switch until only "T" appears.

2) To set a subaudible tone frequency, see right.

3) To turn OFF a subaudible tone, repeat step 1 until "T" or "T SQL" disappears.

13-5 Tone squelch (CTCSS)

The tone squelch function allows you to receive only signals with the same subaudible tone as those programmed in your transceiver.

An optional UT-50 TONE SQUELCH UNIT is necessary for operation.

1) While pushing [F], push [1] (T/T SQL) until "T SQL" appears on the function display.
   • When only "T" appears, the subaudible tone encoder is activated.

2) To set a tone frequency, see below.

3) To turn OFF a subaudible tone, repeat step 1 until "T" or "T SQL" disappears.

NOTE: The tone squelch cannot be used through a repeater equipped with a tone filter.

---

**USING SET MODE**

**SETTING A TONE FREQUENCY**

```
88.5 TO
```

The display shows the tone frequency for 88.5 Hz.

1) Push [A] (CLR) to select VFO mode.

2) While pushing [F], push [8] (SET) to enter SET mode.
   • Refer to p. 8 for SET mode details.

3) Push [+] (▼) or [−] (▲) until "TO" appears as shown above.

4) Rotate the tuning control to set the desired frequency.

5) Push [A] (CLR) to exit SET mode.

</table>
14 MAINTENANCE

14-2 Backup battery

The transceiver is equipped with a rechargeable lithium backup battery for retaining memory information.

NOTE: If the transceiver is not used within 1 week after the internal battery is exhausted, the capacity of the lithium backup battery may be exhausted and memory information erased. At this time, reset the transceiver. See the inside of front cover for reset information.

CAUTION: Disconnect the DC power cable or an empty battery pack when not using the transceiver. If these remain connected, the internal battery cannot be used to charge the lithium battery.

14-3 Cleaning

If the transceiver becomes dusty or dirty, wipe it clean with a dry, soft cloth.

AVOID the use of chemical agents such as benzine or alcohol, as they can damage transceiver surfaces.
### GENERAL

*Specifications guaranteed Unit: MHz 144.00 ~ 148.00 MHz

- **Mode**: FM (F3)
- **Antenna impedance**: 50 Ω unbalanced
- **Acceptable external power source**: 6 ~ 16V DC negative ground or battery packs BP-81 ~ 85, BP-90
- **Current drain (At 13.8 V DC; typical)**
  - Transmit: High 1.5 A, Low 650 mA
  - Receive: Max. audio 250 mA, Power saved 16 mA (Average)
- **Usable temperature range**: −10°C ~ +60°C (+14°F ~ +140°F)
- **Dimensions**: 49(W) x 102.5(H) x 35(D) mm 1.9(W) x 4.1(H) x 1.4(D) in Projections not included
- **Weight**: 280 g (9.9 oz)

### TRANSMITTER

- **Output power (at 13.8 V DC)**
  - High: More than 5.0 W
  - Low: 3.5/1.5/0.5 W (selectable)
- **Modulation system**: Variable reactance frequency modulation
- **Max. frequency deviation**: ±5 kHz
- **Spurious emissions**: Less than −60 dB
- **Microphone impedance**: 2 kΩ
- **Duty cycle**: 1:3 (min) (Transmit : Receive)

### RECEIVER

- **Receive system**: Double-conversion superheterodyne
- **Intermediate frequency**: 1st 30.875 MHz 2nd 455 kHz
- **Sensitivity**: Less than 0.18 μV for 12 dB SINAD
- **Squelch threshold sensitivity**: Less than 0.1 μV
- **Selectivity**: More than 15 kHz/−6 dB
  - Less than 30 kHz/−60 dB
- **Spurious rejection ratio**: More than 60 dB
- **Audio output power**: More than 200 mW at 10 % distortion with an 8 Ω load
