Functions and features of Adobe® Acrobat® Reader®

The following functions and features can be used with Adobe® Acrobat® Reader®.

• **Keyword search**
  Click “Find (Ctrl+F)” or “Advanced Search (Shift+Ctrl+F)” in the Edit menu to open the search screen. This is convenient when searching for a particular word or phrase in this manual.
  *The menu screen may differ, depending on the Adobe® Acrobat® Reader® version.

• **Find screen**

• **Advanced search screen**

• **Printing out the desired pages.**
  Click “Print” in File menu, and then select the paper size and page numbers you want to print.
  *The printing setup may differ, depending on the printer. Refer to your printer’s instruction manual for details.
  *Select “A4” size to print out the page in the equalized size.

• **Read Out Loud feature.**
  The Read Out Loud feature reads aloud the text in this Instruction Manual.
  Refer to the Adobe® Acrobat® Reader® Help for the details.
  (This feature may not be usable, depending on your PC environment including the operating system.)
  *The screen may differ, depending on the Adobe® Acrobat® Reader® version.
TABLE OF CONTENTS

1 ADVANCED OPERATIONS .................................. 1-1
   Operating CW (ADVANCED) ................................ 1-1
   ◦ About the CW Reverse mode ............................... 1-1
   ◦ Using the Memory Keyer function (KEYER) .......... 1-2
   ◦ Keyer memory edit menu (EDIT) ......................... 1-2
   ◦ Contest number menu (001 SET) ......................... 1-3
   ◦ Keyer set menu (CW-KEY SET) .......................... 1-4
   Operating RTTY (FSK) ........................................ 1-5
   ◦ Displaying the RTTY DECODE screen ................. 1-5
   ◦ RTTY decoding ................................................ 1-5
   ◦ Twin Peak Filter (TPF) ...................................... 1-5
   ◦ Transmitting an RTTY memory content ............... 1-6
   ◦ Editing an RTTY memory ................................... 1-7
   ◦ Turning ON the RTTY log .................................. 1-8
   ◦ Viewing the RTTY log contents ......................... 1-8
   ◦ RTTY Decode Log set ....................................... 1-9
   ◦ About the RTTY decode set menu ........................ 1-10
   Tone squelch operation ...................................... 1-11
   DTCs code squelch operation .............................. 1-12
   FM repeater operation ....................................... 1-13
   ◦ Checking the repeater input signal ..................... 1-13
   ◦ Setting the repeater tone frequency ................... 1-13
   Duplex operation .............................................. 1-14
   Data communication ......................................... 1-14

2 VOICE RECORDER FUNCTIONS ....................... 2-1
   Recording a QSO audio ....................................... 2-1
   ◦ Quick recording ............................................. 2-1
   ◦ Basic recording ............................................. 2-1
   Playing back a QSO audio .................................... 2-2
   ◦ Fast forward while playing ............................... 2-2
   ◦ Rewind while playing ...................................... 2-2
   ◦ Pause while playing ....................................... 2-2
   ◦ Playing the previous file ................................ 2-2
   ◦ Playing the next file ..................................... 2-2
   ◦ Moving to the beginning of the previous file ........ 2-2
   ◦ Moving to the beginning of the next file ............. 2-2
   Playing back audio on a PC ................................. 2-3
   Checking the folder or file information .................. 2-3
   Deleting files .................................................. 2-4
   Deleting folders ............................................... 2-4
   RECORDER SET screen ...................................... 2-5
   PLAYER SET screen ........................................... 2-6

3 VOICE TX MEMORY FUNCTION ..................... 3-1
   Recording a Voice TX memory .............................. 3-1
   ◦ Recording ..................................................... 3-1
   ◦ Playing back ................................................ 3-1
   Entering a Voice TX memory name ....................... 3-2
   Transmitting a Voice memory content ................... 3-2
   ◦ Transmitting ................................................ 3-2
   ◦ Repeatedly transmitting .................................. 3-3
   ◦ Adjusting the output level ............................... 3-3
   VOICE TX SET screen ......................................... 3-4

4 MEMORY OPERATION .................................... 4-1
   Memory channels ............................................. 4-1
   ◦ Selecting a Memory channel .............................. 4-1
     ◦ Selecting with (MULTI) ................................. 4-1
     ◦ Selecting a channel on the MEMORY screen ....... 4-1
     ◦ Selecting using the keypad ............................. 4-1
     ◦ Selecting a Call channel ................................ 4-1
   Entering memory channel contents ....................... 4-2
   Copying the Memory channel contents ................... 4-3
   ◦ Copying to the VFO ........................................ 4-3
   ◦ Copying to the other Memory channel ............... 4-3
   Entering a memory name .................................... 4-4
   Clearing a memory channel ................................ 4-4
   About the MEMORY screen ................................ 4-5
   Memo Pad ........................................................ 4-5
   ◦ Saving the contents into a Memo Pad ................. 4-5
   ◦ Calling up the Memo Pads ............................... 4-5

5 SCANS ..................................................... 5-1
   Scan types .................................................... 5-1
   Preparation ................................................... 5-1
   ◦ Squelch status .............................................. 5-1
   SCAN screen .................................................. 5-2
   SCAN SET screen ............................................. 5-3
   Programmed scan ............................................. 5-4
   ◦ Programmed scan operation ............................. 5-4
   Memory scan ................................................. 5-5
   ◦ Memory scan operation ................................... 5-5
   ◦ Setting the Select Memory channels ................. 5-5
   ◦ Select Memory scan operation ........................ 5-6
   ◦ Mode Select scan operation ............................. 5-6
   ΔF scan and Fine ΔF scan .................................... 5-7
   ◦ ΔF scan operation ......................................... 5-7
   Temporary Skip function ................................... 5-7

6 OTHER FUNCTIONS ..................................... 6-1
   Measuring SWR .............................................. 6-1
   Protection function ......................................... 6-1
   Selecting the display type and font ..................... 6-1
   ◦ Selecting the display background ....................... 6-1
   ◦ Selecting the display font ............................... 6-1
   NTP function .................................................. 6-2
   ◦ Using the NTP Time Synchronize function .......... 6-2
   ◦ Using the NTP function ................................... 6-2
   REF adjustment ................................................ 6-3
   Screen Capture function .................................... 6-3
   ◦ Setting the Screen Capture function ................. 6-3
   ◦ Capturing a screen ........................................ 6-3
   ◦ Viewing the captured screen ............................ 6-3
   Entering DTMF code ........................................... 6-4
   Transmitting the DTMF code ............................... 6-4
   ◦ Transmitting a DTMF code ............................... 6-4
   ◦ Selecting the DTMF transmit speed .................... 6-5

7 GPS OPERATION (BASIC) ............................. 7-1
   Before starting GPS operation ............................ 7-1
   ◦ Connecting a GPS receiver ............................... 7-1
   ◦ Confirming the GPS signal receiving ................. 7-1
   Manually input the position data ......................... 7-2

8 GPS OPERATION (ADVANCED) ...................... 8-1
   Before starting GPS operation ............................ 8-1
   ◦ Confirming the GPS signal receiving ................. 8-1
   ◦ Manually setting your position ......................... 8-1
   GPS TX mode and TX format types ..................... 8-3
   Difference between older models ....................... 8-3
   When a received signal contains position data ....... 8-4

1. ADVANCED OPERATIONS

Operating CW (ADVANCED)

◊ About the CW Reverse mode
The CW-R (CW Reverse) mode reverses the receive Beat Frequency Oscillator (BFO) to receive CW signals.
Use this when interfering signals are near the desired signal and you want to use the CW-R to reduce interference.

◊ Using the Memory Keyer function (KEYER)
You can send preset characters using the Memory Keyer function.

Sending
1. Display the KEYER screen.

   MENU » KEYER

   ◊ The [KEYER] key is displayed only in the CW mode.

2. Push [TRANSMIT].
   • The TX/RX indicator lights red.
   ◊ If you want to automatically switch between transmit and receive, turn ON the Break-in function (See Basic manual section 4).

3. Touch a Memory Keyer key between [M1] and [M8].
   (Example: [M1])

   Sending contents
   • The touched Memory Keyer is sent.

4. To repeatedly send the Memory contents, touch the Memory Keyer key for 1 second.

   Repeat icon
   ◊ The Memory contents will be repeatedly sent, according to the setting in “Keyer Repeat Time.”
   ◊ To stop sending, touch the Memory Keyer key again.

<table>
<thead>
<tr>
<th>Key</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>M1 ~ M8</td>
<td>Touch for 1 second</td>
</tr>
<tr>
<td>-1 001</td>
<td>Touch to display the EDIT/SET screen.</td>
</tr>
</tbody>
</table>

TIP: Reversing the carrier point
The carrier point of the CW mode is USB by default. You can change it to LSB on the FUNCTION screen.

   MENU » SET > Function > CW Normal Side
   ◊ When this setting is set to “LSB,” the CW and CW-R modes are reversed.

   Menu: Edit/SET Touch to display the EDIT/SET screen.
1. ADVANCED OPERATIONS

Operating CW (ADVANCED)

Count up trigger

The count up trigger enables the serial number to be automatically increased after each complete serial number exchange is sent. (Default: M2)

1. Count up trigger icon
2. Present number counter

$L$ is displayed on the Memory keyer set to the count up trigger.

$L$ You can change the count up trigger setting in the KEYER 001 menu. (See Basic manual section 4)

Preset Memory keyer contents

<table>
<thead>
<tr>
<th>Memory keyer</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>M1</td>
<td>CQ TEST CQ TEST DE ICOM ICOM TEST</td>
</tr>
<tr>
<td>M2</td>
<td>UR 5NN 001 BK</td>
</tr>
<tr>
<td>M3</td>
<td>CFM TU</td>
</tr>
<tr>
<td>M4</td>
<td>QRZ?</td>
</tr>
</tbody>
</table>

$L$“001” is the CW contest number.

If you want to set the Count up trigger to different keyer, select other keyer in “Keyer memory edit menu (EDIT)” (See BASIC MANUAL).

Keyer memory edit menu (EDIT)

Edit the Memory keyer contents in the EDIT menu.

1. You can use up to a total of 8 Memory keyers (M1 to M8), and you can enter up to 70 characters in each memory.

Editing

(Example: Entering “QSL TU DE JA3YUA TEST” to M3)

1. Display the KEYER MEMORY screen in the CW mode.

2. Touch “CFM TU” for 1 second.

3. Touch “Edit.”

4. Touch [CLR] on the Keyer Memory keyboard until the preset contents are cleared.

Using an external keypad

You can send the preset contents without opening the KEYER screen. See BASIC MANUAL.
Keyer memory edit menu (EDIT) (Continued)

5. Enter “QSL TU DE JA3YUA TEST,” and then touch [ENT] to save.

6. To close the KEYER MEMORY screen, push [EXIT] several times.

Selectable characters

| Alphabets | ABCDEFGHIJKLMNOPQRSTUVWXYZ |
| Symbols   | ? ^ . , @ * |
| Numbers   | 1234567890 |

About the symbols

- Enter “^^” to send a string of characters with no intercharacter space. Put “^^” before a text string such as “AR,” and the string “ar” is sent with no space.
- Enter “*” (asterisk) to insert the CW contest number. The number automatically advances by 1. You can use this for only 1 Memory keyer at a time. “*” is used in Memory keyer M2 by default.

Contest number menu (001 SET)

You can set the number style, count up trigger and preset number.

Setting

1. Display the KEYER 001 menu in the CW mode. 

   MENU » KEYER > EDIT/SET > 001 SET

2. Select the setting item. (Example: Number Style)

3. Select the setting option.

   Number Style (Default: Normal)
   Set the numbering system used for contest (serial) numbers—normal or short morse numbers.
   - Select Normal, 190→ANO, 190→ANT, 90→NO or 90→NT.

   Count Up Trigger (Default: M2)
   Select which of the 8 memories will contain the contest serial number exchange.
   - Select between M1 ~ M8.

   Present Number (Default: 001)
   Set the current number for the Count Up Trigger.
   - Set to between 001 ~ 9999.

TIP: How to reset to the default setting

Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
1. ADVANCED OPERATIONS

Operating CW (ADVANCED)

Keyer set menu (CW-KEY SET)
In this menu, you can set the memory keyer repeat time, dash weight, paddle specifications, key type, and so on.

Setting example
1. Display the CW-KEY SET menu in the CW mode.

MENU » KEYER > EDIT/SET > CW-KEY SET

2. Select the setting item. (Example: Side Tone Level)

3. Adjust the Side Tone Level. (Example: 80%)

4. To close the CW-KEY SET screen, push EXIT several times.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.

Side Tone Level (Default: 50%)
Adjust the CW side tone output level.
• Adjust to between 0 ~ 100%.

Side Tone Level Limit (Default: ON)
Turn the CW side tone level limit ON or OFF. This disables the CW side tone when you rotate (inner) above the side tone level.

Keyer Repeat time (Default: 2sec)
Set the time between Memory keyer transmissions.
• Set to between 1 ~ 60 seconds.
①After transmitting a Memory keyer, the transmission is repeated after the set time period.
②is displayed even between transmissions.

Dot/Dash Ratio (Default: 1:1:3.0)
Set the dot/dash ratio.
• Set to between 1:1:2.8 ~ 1:1:4.5 in 0.1 steps.

Keying weight example: Morse code “K”

Rise Time (Default: 4ms)
Set the rise time of the transmitted CW envelope.
• Set to 2, 4, 6 or 8 milliseconds.

Paddle Polarity (Default: Normal)
Set the paddle dot-dash polarity to Normal or Reverse.
• Normal: Right = dash, Left = dot
• Reverse: Right = dot, Left = dash

Key Type (Default: Paddle)
Set the key type for the [KEY] connector on the rear panel.
• Set to Straight, Bug or Paddle.
①When using an external Elec-keyer, select “Straight.”

MIC Up/Down Keyer (Default: OFF)
Set the microphone [UP]/[DN] keys to use as a CW key.
• ON: Use the [UP]/[DN] keys as a CW key.
• OFF: Do not use the [UP]/[DN] keys as a CW key.
①The [UP]/[DN] keys do not work as a “squeeze key.”
①When “ON” is selected, you cannot change the frequency and the Memory channels using the [UP]/[DN] keys.
1. ADVANCED OPERATIONS

Operating RTTY (FSK)

The IC-9700 has a built-in RTTY decoder and encoder. Using contents set in the RTTY TX memory, you can do basic RTTY operations without using an external device or software.

Displaying the RTTY DECODE screen

With the built-in demodulator and decoder, received RTTY signals are displayed on the RTTY DECODE screen.

MENU » DECODE

RTTY DECODE screen

RTTY decoding

Rotate MAIN DIAL to tune a signal.

Information

• Aim for a symmetrical wave form, and be sure the peak points align with the mark (2125 Hz) and shift (170 Hz) frequency lines in the FFT scope.
• Tune to where both “◄” and “►” are displayed in the tuning indicator.
• The S-meter displays the received signal strength, when a signal is received.
• If you are receiving an RTTY signal but cannot decode correctly, try in the RTTY-R (reverse) mode.

TIP: If you cannot receive, change the settings for “RTTY Mark Frequency” and “RTTY Shift Width.”

TWIN PEAK FILTER

The Twin Peak Filter (TPF) changes the audio frequency response by boosting the mark and space frequencies for better reception of RTTY signals, or for decoding the AF output signal on a PC.

1. Push MULTI to display the Multi-function menu.
2. Touch [TPF].
   • Touching [TPF] turns the Twin Peak Filter function ON or OFF.
3. Push MULTI to close the Multi-function menu.

NOTE: When you are using the Twin Peak Filter, the received audio output may increase. This is not a malfunction.
Operating RTTY (FSK)

Diamond Transmitting an RTTY memory content
You can transmit the preset characters on the RTTY MEMORY screen.

① You can edit the contents by touching [EDIT] on the RTTY MEMORY screen.

1. Display the RTTY DECODE screen in the RTTY mode.
2. Touch [TX MEM].

Memory Title Preset characters by default
RT1 MYCALLx2 ./. DE ICOM ICOM K ./
RT2 MYCALLx3 ./. DE ICOM ICOM ICOM K ./
RT3 QSLUR599 ./. QSL UR 599–599 BK ./
RT4 DE+UR599 ./. QSL DE ICOM ICOM UR 599–599 BK ./
RT5 73 GL SK ./. 73 GL SK ./
RT6 CQ CQ CQ ./. CQ CQ CQ DE ICOM ICOM ICOM K ./
RT7 RIG&ANT ./. MY TRANSCEIVER IS IC-9700 & ANTENNA IS A 2X13–ELEMENT YAGI. ./
RT8 EQUIP. ./. MY RTTY EQUIPMENT IS INTERNAL FSK UNIT & DEMODULATOR OF THE IC-9700. ./

When an external keypad is connected:
You can transmit the preset contents in the RTTY memory (RT1 ~ RT4) from an external device by setting the “External Keypad,” and then connecting an external keypad to [MIC] on the IC-9700.

3. Touch an RTTY memory between [RT1] and [RT8] to transmit. (Example: RT1)
4. To return to the RTTY DECODE screen, push [EXIT].
1. ADVANCED OPERATIONS

Operating RTTY (FSK)

◊ Editing an RTTY memory

You can edit the characters in the RTTY memories. You can save and transmit 8 RTTY memories (RT1 ~ RT8) for often-used RTTY messages. Each RTTY memory can contain up to 70 characters.

1. Display the RTTY MEMORY editing screen.
   MENU » DECODE > TX MEM > EDIT
2. Touch the memory to edit the content. (Example: RT2)
3. Touch [EDIT].
4. To clear a character, touch [←] or [→] to move the cursor, then touch [CLR].
5. Enter the new characters, and then touch [ENT] to save.
6. To exit the RTTY DECODE screen, push [EXIT] several times.
1. ADVANCED OPERATIONS

Operating RTTY (FSK)

◊ Turning ON the RTTY log
Turn ON the RTTY log to save your TX and RX RTTY operating record onto an SD card.
   ① You can select the data format type in the "Log Set" item on the RTTY DECODE LOG screen.
   ② The log is saved even while "HOLD" is ON.
   1. Display the RTTY DECODE LOG screen.
      MENU » DECODE > <1> > LOG
   2. Touch “Decode Log.”
   3. Select “ON.”
   4. Push EXIT.
   ① “●” is displayed on the RTTY DECODE screen while the RTTY log is ON.
   5. To turn OFF the RTTY log, select “OFF” in step 3.

◊ Viewing the RTTY log contents
You can view the saved RTTY log contents.
   1. Insert the SD card that the RTTY log is saved.
   2. Display the RTTY DECODE LOG VIEW screen.
      MENU » DECODE > <1> > LOG VIEW
   3. Touch the log file to view.
   ① The file with “●” is logging. You cannot view this log’s contents.
   4. To exit the RTTY DECODE LOG VIEW screen, push EXIT several times.

Checking the file information and deleting a file
   1. Touch the log file that you want to view or delete for 1 second.
   2. Select an item from “File Information,” “Delete” and “Delete All.”
      • File Information: Displays the file name, size and logged date.
      • Delete: Deletes the selected log file.
      • Delete All: Deletes all log files.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
1. ADVANCED OPERATIONS

Operating RTTY (FSK)

◊ RTTY Decode Log set
This mode is for the log file type, time stamp setting, and other RTTY settings.

1. Display the RTTY DECODE SET screen.

   MENU » DECODE > <1> > LOG > Log Set

2. Select an item to set. (Example: File Type)

3. Select a setting option. (Example: HTML)

4. To exit the RTTY DECODE LOG SET screen, push EXIT several times.

   TIP: How to reset to the default setting
   Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.

   File Type
   (Default: Text)
   Select the file type to save a log onto an SD card to Text or HTML.
   (You cannot change the file type while logging.

   Time Stamp
   (Default: ON)
   Select whether or not to add the time stamp (date, transmission time and reception time) in the log.
   • ON: Adds the time stamp in the log
   • OFF: Does not add the time stamp

   Time Stamp (Time)
   (Default: Local)
   Select whether to save the log with the local time or with the UTC time.

   Time Stamp (Frequency)
   (Default: ON)
   Select whether or not to add the frequency in the log.
   • ON: Adds the frequency
   • OFF: Does not add the frequency
1. ADVANCED OPERATIONS

Operating RTTY (FSK)

◊ About the RTTY decode set mode
This set mode is for the FFT scope setting, USOS function, and so on.

1. Open the RTTY DECODE screen in the RTTY mode.

2. Touch [EXPD/SET] for 1 second.
   • Opens the RTTY DECODE SET screen.

3. Select the desired item to set (Example: FFT Scope Averaging)

4. Select the desired option or setting. (Example: 2)

5. To close the RTTY DECODE screen, push EXIT several times.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.

FFT Scope Averaging (Default: OFF)
Set the FFT scope waveform averaging function to between 2 and 4 or to OFF.
① Use the default or smaller FFT scope waveform number for tuning.

FFT Scope Waveform Color
(Default: R: 51, G: 153, B: 255)
Set the color of the FFT scope waveform.
① Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate [MULTI] or [MAIN DIAL] to adjust the ratio to between 0 and 255.
② The color is displayed in the box above the RGB scale.

Decode USOS (Default: ON)
Turn the letter code decoding capability ON or OFF after receiving a “space.”
① USOS stands for UnShift On Space function.
   • ON: Decodes as a letter code.
   • OFF: Decodes as a character code.

Decode New Line Code
(Default: CR, LF, CR+LF)
Select the internal RTTY decoder new line code.
① CR stands for Carriage Return, and LF stands for Line Feed.
   • CR, LF, CR+LF: Makes a new line with any codes.
   • CR+LF: Makes a new line with only CR+LF code.

TX USOS (Default: ON)
Explicitly inserts the FIGS character, even though it is not required by the receiving station.
① ON: Inserts FIGS
   • OFF: Does not insert FIGS

Displayed Characters during Tx (Satellite)
(Default: TX)
Select the character to display during the Satellite operation.
① RX: Displays decoded characters
   • TX: Displays transmitted characters

Font Color (Receive) (Default: R: 128, G: 255, B: 128)
Font Color (Transmit) (Default: R: 255, G: 106, B: 106)
Set the text font color for received or transmit characters.
① Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate [MULTI] or [MAIN DIAL] to adjust the ratio to between 0 and 255.
② The color is displayed in the box above the RGB scale.
1. ADVANCED OPERATIONS

Tone squelch operation

**FM mode**
The Tone squelch opens only when you receive a signal that includes a matching subaudible tone in the FM mode. You can silently wait for calls from other stations using the same tone. When you transmit, the tone frequency is superimposed on your own signal.

1. Push **FUNCTION**.
   - Opens the FUNCTION screen.
2. Touch [TONE].
3. Touch the Tone squelch mode.
5. Rotate **MAIN DIAL** to set the tone frequency.

- **Selectable tone frequencies**

**About the tone squelch types indication**

- **TSQL**: Tone Squelch function
- **DTCS(T)/TSQL(R)** (“D” in “D-TSQL” blinks): DTCS code in TX, Tone squelch in RX
- **TON(T)/TSQL(R)** (“T” in “T-TSQL” blinks): Repeater tone in TX, Tone squelch in RX

**Checking another station’s tone frequency**

You can check another station’s tone frequency by tone scanning while the station is transmitting.

1. Touch [T-SCAN].

   Blinks while scanning
   - The scan starts, and then stops when the matching tone frequency as another station is received.

2. To close the TONE FREQUENCY screen, push [EXIT].
DTCS code squelch operation

**FM mode**
The Tone squelch opens only when you receive a signal that includes a matching DTCS code in the FM mode. You can silently wait for calls from other stations using the same tone. When you transmit, the DTCS code is superimposed on your own signal.

1. Push **FUNCTION**.
   • Opens the FUNCTION screen.
2. Touch [TONE].
3. Touch to select the Tone squelch mode.
   • Opens the TONE FREQUENCY screen.
5. Rotate **MAIN DIAL** to set the tone frequency.

About the tone squelch types indication

- **DTCS**: DTCS Code function
- **DTCS(T) (“DTCS” blinks)**:

1. ADVANCED OPERATIONS

**FM repeater operation**

A repeater receives your radio’s signals and simultaneously retransmits them on a different frequency to provide a greater communication range. When using a repeater, the transmit frequency shifts from the receive frequency by an offset amount. You can access a repeater using the split function.

1. Select the VFO mode.
2. Set the operating mode to “FM.”
3. Set the receive frequency (Repeater output frequency).
   
   For only U.S.A. and Korea versions:
   When the Auto Repeater function is turned ON, steps 4 and 5 are not necessary.
   The Auto Repeater function automatically sets the repeater settings (duplex ON/OFF, duplex direction, tone encoder ON/OFF).
   
   You can turn OFF the function and manually set the repeater settings.

   4. Set the Duplex direction and frequency offset.
      
      See page 1-14 for setting details.
   5. Set the repeater tone.
      
      See “Setting the repeater tone frequency” to the right.
   6. Communicate in the normal way.
      
      • Subaudible tones are superimposed on your transmit signal.

**Setting the repeater tone frequency**

Some repeaters require a subaudible tone to be accessed. Subaudible tones are superimposed on your signal, and must be set in advance. Do the following steps to set the tone frequency.

1. Push **FUNCTION**.
2. Touch [TONE] for 1 second.
   - Opens the TONE FREQUENCY screen.

   3. Rotate **MAIN DIAL** to select the desired subaudible tone frequency.

**Checking the repeater input signal**

You can check whether you can directly receive another station’s transmit signal or not, by listening to the repeater input frequency.

While listening, the TX/RX indicator lights green, and then the Noise Reduction and Notch Filter settings are cancelled.

While receiving, hold down **XFC** to listen the repeater input frequency.

**Selectable tone frequencies**

</tr>
</tbody>
</table>

**Checking the repeater tone frequency**

You can check the tone frequency by receiving the repeater’s input frequency using the tone scan. To receive the input signals, the transceiver detects the subaudible tone frequency using the tone scan function.

1. Touch [T-SCAN].
   
   Blinks while scanning
   - The scan starts, and then stops when the matching tone frequency as the repeater is received.
2. To close the TONE FREQUENCY screen, push **EXIT**.

Another station’s transmit frequency
**Duplex operation**

The Duplex operation shifts the transmit frequency up or down from the receive frequency by an offset amount.

- **OFF**: For simplex operation (the receive and transmit frequencies are the same).
- **DUP–**: The transmit frequency shifts down from the receive frequency by the offset amount.
- **DUP+**: The transmit frequency shifts up from the receive frequency by the offset amount.

1. Push **FUNCTION**.
2. Touch [2].
3. Touch [DUP].

   • Each touch selects “DUP–,” “DUP+” or “OFF.”

5. Enter the frequency offset, and then touch [ENT].

**Data communication**

**SSB-DATA, AM-DATA and FM-DATA modes**

You can operate the data mode using AFSK (Audio Frequency Shift Keying).

1. Connect a PC or other device to the transceiver.
2. Set the operating frequency and mode.
3. Refer to the application software for communication details.

**NOTE**: When the Auto Repeater function is ON, and the operating frequency is set out of the Repeater output frequency range, the duplex mode is automatically cancelled.

**TIP**: The carrier point is displayed when operating AFSK in the SSB data mode. See the illustration below for a tone-pair example.
2. VOICE RECORDER FUNCTIONS

Recording a QSO audio

This transceiver is equipped with a QSO recorder not only for the receive audio, but also for the transmit audio.

This function is useful to make a QSO record, or to confirm your QSO with a rare entity's station, or on a DXpedition. You can also use the function to repeatedly transmit the same voice message. The recorded contents are saved onto an SD card.

There are 2 ways to start recording.

- Push [QUICK] and select "<<REC Start>>."
- Push [MENU] and touch [RECORD].

The recorded audio is saved in the "Voice" folder on the SD card.

When the PTT Automatic Recording function, "PTT Auto REC" is set to ON in RECORDER SET, the recording automatically starts when you start transmitting.

Audio recording band

You can select to record the received audio from only the selected band or both the Main and Sub bands.

TIP: About the icons

- While recording, "●" is displayed above the VFO/MEMO icon and the SD card icon next to the clock blinks blue.
- While pausing, "II" is displayed.

Quick recording

You can quickly record the received audio.

1. Push [QUICK].
   - Opens the QUICK MENU screen.
2. Touch "<<REC Start>>."
   - Starts recording.
   - "Recording started." is briefly displayed.
   - To stop recording, open the QUICK MENU screen again and touch "<<REC Stop>>."

Basic recording

You can record both receive and transmit audio.

1. Open the QSO RECORDER screen.
2. Touch "<<REC Start>>."
   - Starts recording.
   - "Recording started." is briefly displayed.
   - To stop recording, touch "<<REC Stop>>."
3. To close the QSO RECORDER screen, push [EXIT].

NOTE:

- To record a QSO, an SD card (user supplied) is required.
- Do not remove the SD card from the transceiver while recording. Otherwise the recording stops, and the card data may be corrupted or deleted.
- Once the recording starts, it pauses and resumes if the transceiver is turned OFF and ON again.
- The recording continues until you touch "<<REC Stop>>" or the free space on the SD card has run out.
- When the recording file’s content becomes 2 GB, the transceiver continues to record, but to a new file.
You can playback the recorded QSO audio.

1. Insert the SD card in which the recorded audio is saved.
2. Open the PLAY FILES screen.
3. Touch the folder that the file you want to playback is saved.
4. Touch the desired file.
   • Starts a playback.
5. To close the PLAY FILES screen, push EXIT several times.

You can fast forward or rewind while playing back. You can change the skip time in the PLAYER SET screen. (Default: 10 seconds)

MENU » RECORD > Player Set > Skip Time

◊ Fast forward while playing
Touch ▶ to fast forward to the skip time point. (Default: 10 seconds)

◊ Rewind while playing
Touch ◀ to rewind to the skip time point. (Default: 10 seconds)
   ① If you touch ◀ within the first 1 second of the file, at the end of the previously recorded file will play back.

◊ Pause while playing
Touch ■.
   ① ■ is displayed while pausing.
   ② To cancel the pausing, touch ▶.

◊ Playing the previous file
Touch ◄ to play the previous file.
   ① If there are other files in the folder, while the oldest file is playing back, touch ◄ to start playing the beginning of the file.

◊ Playing the next file
Touch ► to play the next file.
   ① If there are other files in the folder, while the most recent file is playing back, touch ► to stop the playback.

◊ Moving to the beginning of the previous file
   ① While paused, touch ◄ to move to the beginning of the previous file.
   ② To playback the file, touch ►.

◊ Moving to the beginning of the next file
While paused, touch ► to move to the beginning of the next file.
   ① To playback the file, touch ►.
2. VOICE RECORDER FUNCTIONS

Playing back audio on a PC

You can also playback the voice memory data on a PC.

The recorded information (frequency, date, and so on) is not displayed.

1. Insert the SD card into your PC’s SD card slot.
   - If your PC does not have an SD card drive, connect a memory card reader (user supplied) to the PC, and then insert the SD card into the reader.

2. Open the “Voice” folder.
   - Refer to “SD Card” in the BASIC MANUAL.
3. Double-click the folder where the file you want to playback is saved.
   - The folders are titled based on the recorded date. (yyyymmdd)
4. Double-click the file that you want to play back.
   - The audio starts playing back.
   - The files are titled based on the date and time (yyyymmdd_hhmmss.wav).

Checking the folder or file information

You can check the folder information (number of saved file, total size and created date) and recorded file information (operating frequency, mode, S-meter and recorded date, and so on).

Checking the folder information:

1. Open the PLAY FILES screen.

2. Touch a folder for 1 second.
   - Opens the QUICK MENU screen.
3. Touch “Folder Information.”
   - The FOLDER INFORMATION screen is displayed.
4. To close the PLAY FILES screen, push EXIT several times.

Checking the file information:

1. Open the PLAY FILES screen.

2. Touch a folder.

3. Touch a file to check its information for 1 second.

4. Touch “File Information.”
   - The FILE INFORMATION screen is displayed.
5. To close the PLAY FILES screen, push EXIT several times.

NOTE:

- The operations while playing back may differ, depending on the application. Refer to the application’s instruction manual for details.
- When the file does not playback, even if you double click the file, download an appropriate software. (Example: Windows Media® Player)
2. VOICE RECORDER FUNCTIONS

Deleting files

1. Open the PLAY FILES screen.
   `{MENU} » RECORD > Play Files`
   • The folder list is displayed.
2. Touch the folder where the file you want to delete is saved.
3. Touch the file that you want to delete for 1 second.
   • Opens the QUICK MENU screen.
4. Touch “Delete.”

   If you want to delete all files in the selected folder, touch “Delete All.”
   • “Delete file?” is displayed.
5. Touch [YES].
   • The file is deleted and returns to the previous screen.
6. To close the PLAY FILES screen, push [EXIT] several times.

Deleting folders

NOTE: All the files in the folder are also deleted.

1. Open the PLAY FILES screen.
   `{MENU} » RECORD > Play Files`
   • The folder list is displayed.
2. Touch the folder you want to delete for 1 second.
   • Opens the QUICK MENU screen.
3. Touch “Delete.”
   • If you want to delete all folders, touch “Delete All Folders.”
4. Touch [YES].
   • The folder is deleted and returns to the previous screen.
5. To close the PLAY FILES screen, push [EXIT] several times.
2. VOICE RECORDER FUNCTIONS

RECORER SET screen

You can change the recorder settings on this screen.

MENU ] RECORD ] RECORDER SET

TX REC Audio (Default: Direct)
Select the transmit audio to record.
• Direct:  Records the microphone audio.
• Monitor: Records the TX monitor audio.

RX REC Condition (Default: Squelch Auto)
Select the recording setting for receive.
• Always:   Records even if no signal is received.
• Squelch Auto:  Records only when the squelch
  opens.
  (The recording will be paused when
  the squelch closes while recording.)

File Split (Default: ON)
Turn the File Split function ON or OFF.
• OFF:  The audio is continuously recorded into
  the file even if you switch between transmit
  and receive or the squelch status changes
  between open and closed.
  When the recording file’s size becomes
  2 GB, the transceiver continues to record, but
  to a new file.
• ON:  While recording, if you switch between
  transmit and receive, or the squelch status
  changes between open and closed, a new file
  is automatically created in the same folder,
  and the audio is saved into the new one.

REC Operation (Default: MAIN/SUB Link)
Select the recording operation on the dual band display.
• MAIN/SUB Separate:  The recording function is
  separately active/inactive on the selected band (MAIN
  band) when the function is
  started or stopped.
• MAIN/SUB Link:  The recording function is
  simultaneously active/inactive on both MAIN and SUB
  bands when the function is
  started or stopped.
  † On the single band display,
    only displayed band (MAIN or
    SUB) is recorded.

PTT Auto REC (Default: OFF)
Turn the PTT Automatic Recording function ON or OFF.
• OFF:  The recording does not start, even if a signal
  is transmitted.
• ON:  The recording automatically starts when a
  signal is transmitted.

The recording will stop when:
• 10 seconds has passed after the last transmission.
• 10 seconds has passed if no signal is received after the
  last transmission.
  - If you receive a signal within 10 seconds after the last
    transmission, the received audio is also recorded.
  - If you receive another signal within 10 seconds after the
    last reception, the received audio is also recorded.
• 10 minutes has past while operating with the squelch is
  open in the SSB, CW, RTTY, or AM mode.
• The frequency or operating mode is changed.

PRE-REC for PTT Auto REC (Default: 10sec)
Select whether or not to record the audio that is
received before the PTT Automatic Recording
function is activated.
• OFF:  Does not record the audio.
• 5sec/10sec/15sec:
  Records the audio that is previously received
  in this set period of time.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays
the Quick menu, and then touch “Default” to reset to
the default setting.
2. VOICE RECORDER FUNCTIONS

PLAYER SET screen

You can fast forward or rewind while playing back. You can change the skip time in the PLAYER SET screen.

1. Open the QSO RECORDER screen.

2. Touch “Skip Time.”

3. Touch your desired option.

4. To close the RECORD screen, push EXIT several times.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
3. VOICE TX MEMORY FUNCTION

Recording a Voice TX memory

You can record up to 8 Voice transmit memories (T1 ~ T8) of up to one and a half minutes in each memory, onto an SD card. To transmit a recorded content using a Voice TX memory, first record the message, as described below.

① You can record up to 1 and a half minutes in each memory.
② A user supplied SD card is required to use the Voice TX memory function.
③ You can also transmit the recorded content using an external keypad.

◊ Recording

1. Display the VOICE TX screen in the SSB, AM, FM or DV mode.

   ![Menu VOICE](image)

MENU » VOICE

2. Touch [REC/SET].

   ![Recording Screen](image)

3. Touch the “REC” item.

   ![Record Screen](image)

   • Opens the VOICE TX RECORD screen.

4. Select the desired Voice memory “T1” ~ “T8.” (Example: T1)

   ![Record Screen](image)

5. Touch \( \mathbf{\text{REC}} \) to start recording.

   • Without holding down [PTT], speak into the microphone at your normal voice level.
   ① Previously recorded content is overwritten.

   ![Adjust MIC GAIN](image)

   Touch to open the MIC GAIN adjustment window

   Adjust the Mic gain so that the “REC Level” meter reads less than 80%

6. Touch \( \mathbf{\text{STOP}} \) to stop recording.

7. To close the VOICE TX screen, push \( \mathbf{\text{EXIT}} \) several times.

◊ Playing back

1. On the selected memory’s recording screen, touch \( \mathbf{\text{PLAY}} \) to start playing back without transmitting.

   ① To stop the playback, touch \( \mathbf{\text{STOP}} \).

   ![Playback Screen](image)

   While playing

2. To close the VOICE TX screen, push \( \mathbf{\text{EXIT}} \) several times.

   ![Playback Screen](image)

   While playing

TIP: How to clear the recorded content

Touching the Voice memory for 1 second in step 4 to the left, and then touch “Clear” in the Quick menu.
3. VOICE TX MEMORY FUNCTION

Entering a Voice TX memory name

You can assign a name to recorded Voice memories.

[Example: Entering “Contest” in Memory T1]

1. Display the VOICE TX screen in a Voice mode.
   • Voice mode: SSB, AM or FM modes.
   MENU > VOICE > REC/SET > REC

   • Opens the VOICE TX RECORD screen.

2. Touch [p] or [q] to display the desired Voice memories “T1” ~ “T4” or “T5” ~ “T8,” and then touch the memory for 1 second.

3. Touch “Edit Name.”

   • Opens the Name editing screen.

4. Enter a name of up to 16 characters, and then touch [ENT] to save.
   • See “Keyboard entering and editing” in the BASIC MANUAL for details.

5. To close the VOICE TX RECORD screen, push EXIT.

Transmitting a Voice memory content

You can transmit the Voice TX memory contents once, or repeatedly. This is useful for transmitting your call sign, contest number or name in some contests, or repeatedly calling CQ.

◊ Transmitting

Transmits the prerecorded content. (p. 3-1)

1. Display the VOICE TX screen in a Voice mode.
   • Voice mode: SSB, AM, FM or DV mode.
   MENU > VOICE

2. Touch the desired Voice memory key [T1] ~ [T8].
   • Transmits the recorded content once.

3. To close the VOICE TX screen, push EXIT.

TIP: How to cancel a Voice TX transmission

• Touch any keys other than [TX LEVEL] on the VOICE TX screen
• Push EXIT or V/M
• Touch the frequency’s MHz digits or the Memory channel number
• Turn OFF the transceiver
3. VOICE TX MEMORY FUNCTION

Transmitting a Voice memory content

Diamond Repeatedly transmitting

1. Display the VOICE TX screen in a Voice mode.
   ①(Voice modes: SSB, AM, FM and DV).

2. Touch the desired Voice memory key [T1] ~ [T8] for 1 second.
   • Repeatedly transmits the recorded content.

Information

• The recorded content is repeatedly transmitted for 10 minutes, unless you manually stop transmission by touching the selected memory.
• The Memory Timer counts down.
• "R" is displayed while repeatedly transmitting.
• You can set the pause interval between the repeated transmissions in the "Repeat Time" item on the VOICE TX SET screen. During this interval, the transceiver returns to receive. (p. 3-4).
• After 10 minutes have passed, and all of the recorded content in the memory is transmitted, the transceiver automatically returns to receive.
• When a signal is received in the interval between transmissions, the transceiver pauses the next transmission until the signal disappears. However, if the squelch is set to open, the transceiver repeatedly transmits after the repeat interval time expires, even signals are received.

3. To close the VOICE TX screen, push EXIT.

Diamond Adjusting the output level

1. Display the VOICE TX screen in a Voice mode.
   ①(Voice modes: SSB, AM, FM and DV).

2. Touch [TX LEVEL].

3. Touch any Voice memory key other than [T4] or [T8]. ([T1] ~ [T3], [T5] ~ [T7])
   • The transceiver automatically transmits.
   ①To adjust the Transmit voice level using [T4] or [T8], reverse steps 2 and 3.

4. While transmitting, rotate MAIN DIAL to adjust the transmit voice level.
   ①Pushing [DEF] for 1 second returns the value to the default.
   ①Adjusting TX LEVEL too high may result in an over modulation and transmit signal distortion.

5. To save and close the VOICE TX screen, push EXIT several times.
3. VOICE TX MEMORY FUNCTION

VOICE TX SET screen

This Set screen is used to set the Automatic Monitor function and the Transmit Repeat Interval.

1. Display the VOICE TX SET screen.

   MENU ➔ VOICE ➔ REC/SET ➔ SET

2. Touch the setting item. (Example: Auto Monitor)

3. Select an option or set the time.
   • See below for details of the setting items and their options.

4. To close the VOICE TX SET screen, push EXIT.

Auto Monitor  (Default: ON)
Turn the Automatic Monitor function for recorded audio contents transmission, ON or OFF.
• ON: Automatically monitors transmit audio when sending a recorded audio.
• OFF: Monitors transmit audio only when the Monitor function is ON.

Repeat Time  (Default: 5sec)
Set the repeat interval to repeat the voice transmission. The transceiver repeatedly transmits the recorded content at this interval.
• Range: 1 ~ 15 seconds

Repeatedly transmits the recorded content for up to 10 minutes.
After 10 minutes have passed, and all of the recorded content in the memory is transmitted, the transceiver automatically returns to receive.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
4. MEMORY OPERATION

Memory channels

The Memory mode enables you to quickly select often-used frequencies, modes and other parameters. You can change the operating frequency, mode and so on while operating in the Memory mode. You can temporarily tune the memory channel frequency by rotating (MAIN DIAL).

<table>
<thead>
<tr>
<th>Memory channel</th>
<th>Displayed</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 to 99</td>
<td>Regular memory channels. 1 frequency, 1 mode, 1 filter, memory name, tone settings (including tone frequencies for repeater and tone squelch) and select memory scan setting in each memory channel.</td>
</tr>
<tr>
<td>1A/1B ~ 3A/3B</td>
<td>Scan Edge memory channels. 1 frequency and 1 mode in each memory channel as scan edges for programmed scans.</td>
</tr>
<tr>
<td>C1/C2</td>
<td>Call channels. Cannot be left blank.</td>
</tr>
</tbody>
</table>

Selecting a Memory channel

Selecting with (MULTI)
1. Push (V/M) to select the Memory mode.
2. Rotate (MULTI) until you select the Memory channel you want to use.
   ①You can also select the memory channel with [UP] and [DOWN] keys on the microphone.

Selecting a channel on the MEMORY screen
1. Push (V/M) to select the Memory mode.
2. Display the MEMORY screen.
3. Rotate (MULTI) or (MAIN DIAL), or touch [UP] or [DOWN] until the desired Memory channel is shown on the screen.
4. Touch the Memory channel you want to use.
   • The channel is selected and automatically closes the MEMORY screen.

Selecting using the keypad
1. Push (V/M) to select the Memory mode.
2. Touch the MHz digit on the operating frequency.
   • The BAND STACKING REGISTER screen is displayed.
3. Touch [F-INP].
   • The F-INP screen is displayed.
4. Enter the desired memory channel number. (Example: memory channel 2)
5. Touch [MEMO] to set the entered memory channel.

Selecting a Call channel
1. Push (CALL) to select the Call channel mode.
2. Rotate (MULTI) to select the Call channel you want to use.
3. To return to the previous screen, push (CALL).
4. MEMORY OPERATION

Entering memory channel contents

The operating frequency, operating mode, IF filter bandwidth, and so on can be entered to each memory channel.

**NOTE:** New content you enter will overwrite any content already in the selected memory.

1. Push \textit{V/M} to select the VFO mode.
2. Set the frequency and operating mode.
3. Hold down \textit{kH\_LCH} for 1 second.
   \begin{figure}[h]
   \centering
   \includegraphics[width=0.5\textwidth]{channel_selection.png}
   \caption{Channel selection and MHz selection.}
   \end{figure}

4. Rotate \textit{MULTI} to select the Memory channel to enter the contents set in step 2. (Example: 2)
   \begin{itemize}
   \item If "BLANK" is displayed under the selected memory channel number, it is a blank channel, meaning that no contents are entered in that channel.
   \end{itemize}

5. Touch the Memory channel number.
   \begin{figure}[h]
   \centering
   \includegraphics[width=0.5\textwidth]{channel_touch.png}
   \caption{Touched channel number.}
   \end{figure}

6. Touch \textit{[MW]} for 1 second until BLANK disappears from below the channel number.
   \begin{figure}[h]
   \centering
   \includegraphics[width=0.5\textwidth]{channel_touch_button.png}
   \caption{Channel touch button and MW button.}
   \end{figure}

   • The contents are entered in the selected Memory channel, and BLANK is not displayed below the channel number.

7. To close the VFO/MEMORY screen, push \textit{EXIT}.

\[4-2\]
4. MEMORY OPERATION

Copying the Memory channel contents

You can copy a Memory channel contents to the VFO or another memory channel.

◊ Copying to the VFO
1. Push [V/M] to select the Memory mode.
2. Push [kHz M-CH].
3. Rotate [MULTI] to select the channel to be copied. (Example: Memory channel 1)
   • A beep sounds and the selected memory contents are copied to the VFO.
5. Push [V/M] to select the VFO mode.

◊ Copying to the another Memory channel
1. Push [V/M] to select the Memory mode.
2. Push [kHz M-CH].
3. Rotate [MULTI] to select the channel to be copied. (Example: Memory channel 3)
4. Open the MEMORY screen.
5. Rotate [MAIN DIAL] to select the channel to write the copied contents to. (Example: Memory channel 5)
   ① Do not rotate [MULTI]. Select the channel by rotating [MAIN DIAL].
6. Touch [ ] of the selected channel.
7. Touch “Memory Write.”
8. Touch [Yes].
   • A beep sounds and the selected memory contents are copied.
9. To close the MEMORY screen, push [EXIT].
4. MEMORY OPERATION

**Entering a memory name**

Except for the blank channels, you can assign a name to all memory channels, including scan edges.

The names will be displayed along with the frequency, mode and filter number.

1. Display the MEMORY screen.

2. Rotate (MULTI) to select the channel to enter a name. (Example: Memory channel 2)

3. Touch of the selected channel.

4. Touch “Edit Name.”

(Touch “Memory Clear” to clear any memory contents and name.

5. Enter a name, and then touch [ENT].

(Example: CQ)

6. To close the MEMORY screen, push EXIT.

**Clearing a memory channel**

You can clear a no-longer-used memory channel and reset it as a blank channel, except for the program channels (1A/1B ~ 3A/3B) and Call channels (C1 and C2).

1. Push (VM) to select the Memory mode.

2. Push kHz.

3. Rotate (MULTI) to select the channel to clear. (Example: Memory channel 2)

4. Touch the channel number.

5. Touch [M-CLR] for 1 second to clear the memory channel.

6. To close the VFO/MEMORY screen, push EXIT.

1. The Memory name is not displayed when the Mini scope screen (p. 5-2) or expanded screen is displayed.

2. You can also select not to display the Memory name on the standby screen.

MENU » SET > Display > Memory Name
4. MEMORY OPERATION

About the MEMORY screen

MENU » MEMORY
You can edit Memory channel contents on the MEMORY screen.

1 Memory channel number
Displays the memory channel number.
① 1A/1B ~ 3A/3B, C1 and C2 cannot be left blank.

2 Frequency
Displays the entered frequency.

3 Operating mode
Displays the selected operating mode.

4 Memory menu
Touch to display the MEMORY MENU.
① You can select between “Edit Name,” “Memory Write” and “Memory Clear.”

5 Memory name
Displays the memory name, if entered.
① See the previous page for details.

6 Memory select icon (1 ~ 99)
Touch this icon to set the Select number “★1,” “★2,” “★3” or OFF. See page 5-5 for the Select Memory scan.
① You can also touch the icon for 1 second to display the SELECT ALL CLEAR screen, and then select the desired item to reset the Select number.

About the QUICK MENU
While selecting a memory channel with memory contents, push QUICK to display the QUICK MENU, where you can select “SELECT,” “Edit Name,” “Memory Write,” “Memory Clear,” or “SELECT All Clear.”

Memo Pad

There are 5 Memo Pads as the default to save frequencies and operating modes for easy writing and recall. You can increase the Memo Pads to 10 in “Memopad Numbers.”

MENU » SET > Function > Memo Pad Quantity
① The Memo Pads are separate from memory channels. Memo Pads are convenient when you want to temporarily memorize a frequency and operating mode, such as when you find a DX station in a pile-up, or when the desired station is busy for a long time and you want to temporarily search for other stations.

◇ Saving the contents into a Memo Pad
1. Select the operating band (MAIN or SUB).
2. Push V/M to select the VFO mode.
3. Set the frequency and operating mode, and then push MPAD for 1 second.
   • A beep sounds.
① When you save up to the set number of Memo Pads in “Memo Pad Quantity,” the oldest Memo Pad is automatically cleared for the new Memo Pad.

NOTE: Each Memo Pad must have its own unique contents. The Memo Pads with identical content cannot be saved.

◇ Calling up the Memo Pads
You can call up the saved Memo Pads.
1. Select the operating band (MAIN or SUB).
2. Push MPAD several times until the desired Pad is displayed.
   ① Pushing MPAD selects the Memo Pads.
   ② The calling up starts with the most recently saved Pad.

About the MEMO PAD screen
The MEMO PAD screen displays the saved contents in a list, in which you can select or delete the saved contents.

MENU » MPAD

TIP: If you change the frequency or operating mode called up from Memo Pads, the contents are automatically updated in a temporary Pad.

<table>
<thead>
<tr>

<td>Repeatedly scans Memory channels with the same operating mode.</td>
</tr>
<tr>
<td>F SCAN</td>
<td>Repeatedly scans within the F span area. The scan starts from the center frequency. (p. 5-7)</td>
</tr>
<tr>
<td>Fine F scan</td>
<td>If the squelch opens while F spanning, the tuning step changes to 10 Hz. This reduces the scan speed, but the transceiver keeps scanning.</td>
</tr>
</tbody>
</table>

Preparation

◊ Squelch status
The scan work with the selected band’s squelch status. Be sure to adjust the squelch level according to your operating environment.

1. Normally, set RF/SOL to the point where noise just disappears, and the TX/RX indicator goes OFF.
2. When RF/SOL operates as only an RF gain control, you cannot adjust the squelch level.

MENU » SET > Function > RF/SOL Control

When the scan starts with the squelch open:
When the tuning step is 1 kHz or less, the scan continues until it is manually stopped—it does not pause even if signals are detected.

When the tuning step is 5 kHz or more, the scan pauses on each step when the Scan Resume function is ON. It does not pause when the function is OFF.

When the scan starts with the squelch closed:
The scan stops when a signal is detected, regardless of the tuning step.
• When the Scan Resume function is ON, the scan pauses for 10 seconds after detecting a signal, then resumes 2 seconds after the signal disappears.
### 5. SCANS

#### SCAN screen

To display the SCAN screen, push [MENU], and then touch [SCAN].

![SCAN screen](image)

**Key** | **Action** |

**PROG** | Touch | Starts or cancels the Programmed scan.  <br>Touch 1 second | Displays the SCAN SELECT screen. |
**MEMO** | Touch | Starts or cancels the Memory scan.  <br>Touch 1 second | Displays the SCAN SELECT screen. |
**ΔF** | While Programmed scanning, touch to switch to the Fine Programmed scan.  While ΔF scanning, touch to switch to the Fine ΔF scan.  ❧In the Memory mode, this key is displayed when a ΔF scan is started. | Starts or cancels the ΔF scan |
**FINE** | Touch | Selects a Memory channel (except 1A/1B ~ 3A/3B, C1 and C2) to set as a Select Memory channel.  "*1," "*2," "*3," and "(no icon)" are alternately displayed. |
**SELECT** | Touch 1 second | Displays the SELECT ALL CLEAR screen. |
**SEL No.** | Selects the Select scan number for the Select Memory scan.  Each time you touch [SEL No.], "*1," "*2," "*3," and "*1,2,3" are alternately displayed. |
**ΔF SPAN** | Touch to select the ΔF span between ±5.0 kHz, ±10 kHz, ±20 kHz, ±50 kHz, ±100 kHz, ±500 kHz, and ±1 MHz. |
**SET** | Displays the SCAN SET screen.  

---

5-2
5. SCANS

SCAN SET screen

1. Display the SCAN screen.
   
2. Touch [SET].
   
3. Touch an item to set. (Example: SCAN Speed)
   
4. Touch an option. (Example: Slow)

5. To close the SCAN SET screen, push EXIT .

Pause Timer (Default: 10sec)
When Scan Resume is ON, select the Scan Pause Timer. When receiving a signal, the scan pauses for this set period of time.
- 2 ~ 20sec: When a signal is received, the scan pauses for 2 ~ 20 seconds (in 2 second steps).
- HOLD: The scan pauses on a received signal until the signal disappears.

Resume Timer (Default: 2sec)
Select the scan Resume Timer. When a received signal disappears, the scan resumes after this set period of time passed.
- 0sec: The scan resumes immediately after the signal disappears.
- 1 ~ 5sec: The scan resumes 1 ~ 5 seconds after the signal disappears.
- HOLD: The scan remains paused for the Pause Timer setting, even if the signal disappears.

Temporary Skip Timer (Default: 5min)
Set the Temporary Skip Timer. The unwanted frequencies that are set as Skip channels (PSKIP or SKIP) are skipped for this set period of time during a scan.
- While Scanning: Skip channels are skipped until the Scan is stopped.
- While Powered ON: Skip channels are skipped until the receiver power is turned OFF.

SCAN Speed (Default: Fast)
Set the desired scan speed to slow or fast.
- Slow: Scan speed is slow.
- Fast: Scan speed is fast.

SCAN Resume (Default: ON)
Set the Scan Resume function to ON or OFF.
- OFF: When a signal is detected, cancels the scan.
- ON: When a signal is detected, the scan pauses for 10 seconds, then resumes. Two seconds after the signal disappears, the scan resumes.

TIP: How to reset to the default settings
Touching an item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
Programmed scan

<table>
<thead>
<tr>
<th>Programmed scan and Fine Programmed scan</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scan edge 1A ~ 3A</td>
</tr>
<tr>
<td>Scan edge 1B ~ 3B</td>
</tr>
</tbody>
</table>

Repeatedly scans between two Scan Edge frequencies (1A/1B ~ 3A/3B channels).

1. To change the Scan Edge Memory channels, see “Entering memory channel contents” (p. 4-2) for details.
2. If the same frequencies are entered into the Scan Edge Memory channels, the Programmed scan does not start.
3. The Fine Programmed scan is most effective in the SSB, CW, and RTTY modes.

Programmed scan operation

1. Select the VFO mode.
2. Select the operating mode and tuning step. (Example: USB, 1 kHz)
3. Display the SCAN screen.
   
   ![SCAN screen](image)

   
   ![Programmed scan start](image)

5. Touch the frequency range to scan (example: P1)
   
   ![Frequency range selection](image)

6. Touch [FINE] to switch to the Fine Programmed scan.
   
   ![Fine programmmed scan](image)

7. To close the SCAN screen, push EXIT.
5. SCANS

Memory scan

Repeatedly scans all entered Memory channels (except 1A/1B ~ 3A/3B, C1 and C2). Blank (not entered) Memory channels are skipped.

If two or more Memory channels are not entered, the Memory scan does not start.

Memory scan operation
1. Select the Memory mode.
2. Display the SCAN screen.
3. Touch [MEMO] for 1 second.
4. Touch [MEMORY SCAN].

• Memory scan starts.
  ① When a signal is detected, the scan pauses according to the “SCAN Resume” setting, and then resumes.
  ② To cancel the scan, touch [MEMO] again.
5. To close the SCAN screen, push [EXIT].

Select Memory scan

Repeatedly scans Select Memory channels (★1, ★2, ★3).

If two or more Memory channels are not designated as Select Memory channels, the Select Memory scan does not start.

Setting the Select Memory channels
1. Select the Memory mode.
2. Display the MEMORY screen.
3. Touch the SELECT icon to set the channel as the Select Memory channel. (Example: ★1)
   - Each touch selects “★1,” “★2,” “★3,” and “(no icon).” “★1” is set to Memory channel 1.

Touch to set the channel as a Select Memory channel.

Setting Select Memory channels on the SCAN screen.
1. Push kHz/MCH.
2. Rotate [MULT] to select memory channels to set as Select Memory channels. (Example: ★1)
3. Touch [SELECT] to set the selected number. “★1,” “★2,” “★3,” and “(no icon)” are alternately displayed.
4. Repeat steps 2 and 3 to set more than two Select Memory channels.
5. SCANS

Memory scan

♦ Select Memory scan operation
1. Select the Memory mode.
2. Display the SCAN screen.
   MENU » SCAN
3. Touch [MEMO] for 1 second.
4. Touch the Select Memory channel number.
   (Example: ★1)
   • Select Memory scan starts.
   ① When a signal is detected, the scan pauses
      according to the “SCAN Resume” setting, and then
      resumes.
   ① Touch [SELECT] to return to the regular Memory
      scan.
   ① While scanning, touch [SEL No.] to select the Select
      Memory scan number.
   • To cancel the scan, touch [MEMO].
5. To close the SCAN screen, push EXIT.

Clearing all Select Memory channels
1. Touch [SELECT] for 1 second on the SCAN
   screen.
   • The SELECT ALL CLEAR screen is displayed.
2. Touch the Select Memory channels to clear.

Mode Select scan

Mode Select scan operation
1. Select the Memo
2. Set the operating mode.
3. Open the SCAN screen.
   MENU » SCAN
4. Touch [MEMO] for 1 second.
5. Touch [MODE SELECT SCAN].
   • Mode Select scan starts.
   ① When a signal is detected, the scan pauses
      according to the “SCAN Resume” setting, and then
      resumes.
   • To cancel the scan, touch [MEMO].
6. To close the SCAN screen, push EXIT.

(Example: FM channels)
Repeatedly scans memory channels (except 1A/1B ~ 3A/3B, C1 and C2) that is set to the mode
selected before starting the scan.
ΔF scan and Fine ΔF scan

(Example: Span: ±10 kHz)

146.17 MHz  146.16 MHz  146.19 MHz
Scan  Scan  Scan

Repeatedly scans within the ΔF span area. The scan starts from the center frequency.
① In fine scan (programmed or ΔF), the scan speed decreases when the squelch opens, but the transceiver keeps scanning. The scan tuning step changes to 10 Hz when the squelch opens.

ΔF scan operation

1. Set the center frequency.
2. Set the operating mode and tuning step.
   (Example: FM, 1 kHz)
   ① You can also change these settings while scanning.
3. Display the SCAN screen.

4. Touch [ΔF SPAN] several times to select the span.
   • Each touch changes the span.

5. Touch [ΔF].
   • ΔF scan starts.

6. To switch to the Fine ΔF scan, touch [FINE].
   • The scan frequency step changes to 50 Hz.

7. To close the SCAN screen, push [EXIT].

Temporary Skip function

This function temporarily skips unwanted frequencies (or memory channels) during a scan for the set period of time or condition, without changing the Skip Channel setting.

1. Start a scan.
   • When a signal is detected, the scan pauses.
2. Push [QUICK].
3. Touch [Temporary Skip Set].

   • Scan resumes.

TIP:
• Up to 20 Temporary Skip frequencies or Memory channels can be set. When the 21st frequency or Memory channel is set, the oldest setting is automatically deleted.
• The Temporary Skip function is canceled when the Temporary Skip Timer (Default: 5 min) has passed, or when selecting “Temp Skip Cancel” in the Quick menu.
6. OTHER FUNCTIONS

Measuring SWR

The transceiver has a high-performance SWR meter. This meter displays a stable measurement in real time, even if the transmit output power varies frequently. You can measure the SWR of an antenna itself through the internal antenna tuner.

1. Select the RTTY mode.
2. Set the desired frequency band and a frequency in the portion of the band that you use the most.
3. Set the RF POWER.
   - 144 MHz band: 30 W
   - 430 MHz band: 30 W
   - 1200MHz band: 3 W
4. Touch the TX meter several times until the SWR meter is selected.

NOTE: Before transmitting, monitor the operating frequency to make sure you will not cause interference to other stations on the same frequency.

5. Hold down [PTT] on the microphone to transmit, and then read the SWR on the meter.

Protection function

The transceiver has a 2 step protection function to protect the final power amplifiers in case the antenna SWR becomes high. The function detects the power amplifier temperature and activates when the temperature becomes too high.

Power down transmission
Reduces the transmission output power.
- "LMT" is displayed below TX while transmitting.

TX inhibit
Disables the transmitter.
- TX is displayed instead of TX while the transmitter is disabled.

If the function is activated, wait until the power amplifier cools down by using the transceiver to only receive.

NOTE: Do not turn OFF the transceiver power when the Protection function is activated. If you do, the cooling fan will stop and it will take longer to cool down.
- You can check the power amplifier temperature with the TEMP gauge in the Multi-function meter.

Selecting the display type and font

You can select between 2 display backgrounds and 2 frequency readout fonts.

♦ Selecting the display background
1. Select the "Display Type" screen.
   MENU » SET > Display > Display Type
2. Set the background A or B by rotating and then pushing MULTI.
   - A: Black background (default)
   - B: Blue background
3. To close the DISPLAY screen, push EXIT several times.

♦ Selecting the display font
1. Select the "Display Font" screen.
   MENU » SET > Display > Display Font
2. Set the desired display font to "Basic" or "Round" by rotating, and then pushing MULTI.
   - Basic (Default): 146.520.00
   - Round: 146.520.00
3. To close the DISPLAY screen, push EXIT several times.
6. OTHER FUNCTIONS

NTP function

The NTP (Network Time Protocol) function synchronizes the internal clock with a time management server.

①To use this function, an internet connection, and default gateway settings are necessary.

◇ Using the NTP Time Synchronize function
Using this function you can manually synchronize the internal clock by accessing a time management server.

1. Display the DATE/TIME screen.

   MENU » SET > Time Set > Date/Time

2. Touch “<<NTP TIME SYNC>>.”

   • “NTP Time Sync. Please wait...” is displayed.
   • The transceiver starts accessing the NTP server address that is set in the “NTP Server Address” item.

3. When “Time Sync completed.” is displayed, touch [OK].
4. To close the DATE/TIME screen, push EXIT several times.

◇ Using the NTP function
By turning ON the NTP function, the transceiver automatically synchronizes the internal clock with the time management server.

①This function is set to ON by default.
①An Internet connection is necessary.

1. Display the DATE/TIME screen.

   MENU » SET > Time Set > Date/Time

2. Touch “NTP Function.”

3. Select ON or OFF.
   • When ON is selected, the transceiver starts accessing the NTP server address that is set in the “NTP Server Address” item.

4. To close the DATE/TIME screen, push EXIT several times.
6. OTHER FUNCTIONS

**REF adjustment**

You can perform a rough frequency calibration using the external 10 MHz reference frequency signal.

**NOTE:** The transceiver has been adjusted and tested at the factory before being shipped. You should not have to re-calibrate it.

1. Apply a highly accurate and stable 10 MHz reference frequency signal to the [REF IN 10MHz] connector.
2. Display the “REF Adjust” screen.
   ```
   MENU » SET > Function > REF Adjust
   ```
3. Touch [AUTO ADJ].
4. Touch [YES].
5. Push EXIT several times to close the FUNCTION screen.

   After the adjustment, “Finished” is displayed.

**Screen Capture function**

You can capture the transceiver display onto an SD card. Most of the screens used in this manual are captured using this function. However, some displays cannot be captured.

**Setting the Screen Capture function**

1. Open the “Screen Capture [POWER] SW” screen.
   ```
   MENU » SET > Function > Screen Capture [POWER] SW
   ```
2. Select “ON” by rotating and pushing MULTI.

**Capturing a screen**

1. Select the desired screen to capture.
2. Push POWER to capture the screen.
   - The captured screen is saved onto the SD card.

**Viewing the captured screen**

1. Open the SCREEN CAPTURE VIEW screen.
   ```
   MENU » SET > SD Card > Screen Capture View
   ```
   - The capture list is displayed.
   - The latest screen capture is at the top of the list.
2. Touch the desired screen capture to display it.
   - The screen capture is displayed.
   - While a screen capture is displayed, you can scroll through all the screen captures by rotating MULTI.

**Other options in the capture list**

1. While the capture list is displayed, push QUICK to display the QUICK MENU.
2. Select the desired option.
   - File Information: Displays the name, size, and date of the selected screen capture.
   - Delete: The confirmation dialog is displayed before deleting the file. Select [YES] to delete or select [NO] to cancel.
   - Delete All: The confirmation dialog is displayed before deleting all the files on the list. Select [YES] to delete or select [NO] to cancel.
6. OTHER FUNCTIONS

**Entering DTMF code**

The transceiver can save up to 16 memories of 24 digit DTMF code.

1. Display the “DTMF” screen.
2. Touch [EDIT].
3. Touch the DTMF channel where you want to save a DTMF code. (Example: d0)
4. Enter a DTMF code, then push [ENT]. (Example: 12345A)

⚠️ See “Keyboard entering and editing” in the BASIC MANUAL for details.
5. Push EXIT several times to close the FUNCTION screen.

**Transmitting the DTMF code**

◊ Transmitting a DTMF code

1. Display the “DTMF” screen.
2. Touch [SEND].
3. Touch the DTMF code you want to transmit. (Example: d0)
4. Push EXIT several times to close the DTMF MEMORY screen.

• The selected DTMF channel is set to transmit.
6. OTHER FUNCTIONS

Transmitting the DTMF code

◇ Selecting the DTMF transmit speed
1. Display the "DTMF" screen.

   MENU » DTMF

2. Touch [SET].

3. Touch [DTMF Speed].

4. Touch to select a transmit speed.

   • 100ms: Transmits the DTMF tones at about 100 milliseconds per code.
     5 characters per second.
   • 200ms: Transmits the DTMF tones at about 200 milliseconds per code.
     2.5 characters per second.
   • 300ms: Transmits the DTMF tones at about 300 milliseconds per code.
     1.6 characters per second.
   • 500ms: Transmits the DTMF tones at about 500 milliseconds per code.
     1 character per second.

5. Push EXIT several times to close the DTMF screen.
7. GPS OPERATION (BASIC)

Before starting GPS operation

**NOTE:** Before using the GPS function, read “IMPORTANT NOTES” about the GPS receiver in the BASIC MANUAL.

The GPS receiver’s position data can be received in any mode. Also, a NMEA format compatible external GPS receiver can be connected to the transceiver through the [DATA] jack. To receive signals from an external GPS receiver, connect it to the transceiver as shown below.

◊ Connecting a GPS receiver

![Diagram of connecting a GPS receiver](image)

**Information**
- Confirm that the “DATA Function” item is set to “GPS/Weather.”

MENU » Connectors > USB (B)/DATA Function > DATA Function

- If you want to output the position data that is received by the GPS Receiver, set the “GPS Out” to “DATA→USB (B).” (Default: OFF)

MENU » Connectors > USB (B)/DATA Function > DATA Function

- Set the “GPS Receiver Baud Rate” item, according to your GPS Receiver.

MENU » GPS > GPS Set > GPS Receiver Baud Rate

◊ Confirming the GPS signal receiving

1. Confirm the GPS receiver is receiving satellite signals.
   - The GPS icon blinks when searching for satellites.
   - The GPS icon stops blinking when the minimum number of satellites needed are found.

   - It may take only a few seconds to receive, or it may take a few minutes, depending on your operating environment. If you have difficulties receiving, we recommend that you try a different position.

2. Push **QUICK**.
3. Touch [GPS Position].

   - The GPS POSITION screen opens.

4. Rotate **MAIN DIAL**.
   - My screens (MY), received screens (RX), the GPS Memory channel screen (MEM), and the GPS Alarm channel screen (ALM) are displayed.

5. To close the GPS POSITION screen, push **EXIT**.

GPS POSITION (MY) screen

- When the “GPS Select” is set to “Manual,” SPEED, Compass and Compass Direction are not displayed.
Manually input the position data

1. Manually input
   1. Display the “MANUAL POSITION” screen.
      MENU » GPS > GPS Set > Manual Position
   2. Push QUICK.
   3. Touch [EDIT].
   4. Touch [LATITUDE].
   5. Enter the Latitude, and then touch [ENT].
   6. Enter the Longitude in the same way.
   7. Touch [<<Write>>].
   8. Touch [YES].
   9. To close the MANUAL POSITION screen, push EXIT.

   TIP:
   In Step 3, touch [Capture From GPS] to manually update your position with the received GPS data.

2. Set the “GPS Select” to “Manual”
   1. Display the “GPS SELECT” screen.
      MENU » GPS > GPS Set > GPS Select
   2. Touch [Manual].
   • The manually entered position data is set as your station’s position.
   3. To close the MANUAL POSITION screen, push EXIT several times.
8. GPS OPERATION (ADVANCED)

Before starting GPS operation

You can display your position, and transmit your position data. To use this function, connect a NMEA format compatible external GPS receiver to the transceiver as shown below, or manually enter your position.

The Icom transceiver (Example: ID-31A/E PLUS) can be used as an external GPS receiver.

**NOTE:** Position data can be transmitted in only the DV mode.

**Connection**

- **Confirming the GPS signal receiving**
  - Confirm the GPS icon is displayed.
  - The GPS icon blinks when searching for satellites.
  - The GPS icon stops blinking when the minimum number of satellites needed are found.

**Information**

- If you have difficulties receiving, we recommend you to move a GPS receiver to a different position.
- When **GPS Select** is set to “Manual,” the icon is not displayed.

- Connect Pin 2 to RxD (Ring).
- Connect Pin 3 to TxD (Tip).
- Connect Pin 5 to GND (Sleeve).

- **Set DATA Function** to “GPS/Weather.”

- To output the position data to USB (B), set **GPS Out** to “DATA→USB (B).”

- **Set GPS Receiver Baud Rate** according to the data rate of the GPS receiver.
8. GPS OPERATION (ADVANCED)

Before starting GPS operation

◊ Manually setting your position

1. Setting the current position
   1. Open the MANUAL POSITION screen.
      \[ \text{MENU} \rightarrow \text{GPS Set > Manual Position} \]
   2. Touch for 1 second.
   3. Touch “Edit.”
   4. Touch “LATITUDE.”
   5. Enter the latitude, and then touch [ENT].
   6. Enter the longitude in the same way.
   7. Touch “<<Write>>.”
   8. Touch [Yes].
   9. To close the MANUAL POSITION screen, push EXIT several times.

2. Setting GPS Select to Manual
   1. Open the GPS Select screen.
      \[ \text{MENU} \rightarrow \text{GPS Set > GPS Select} \]
   2. Touch “Manual.”
   3. To close the GPS SET screen, push EXIT several times.

TIP: You can capture position data from the GPS receiver if you touch “Capture From GPS” in step 3.
GPS TX mode and TX format types

GPS position data has 2 TX modes, D-PRS and NMEA. Moreover, with the D-PRS mode data, 5 position formats. Position (Mobile station/Base station), Object, Item, and Weather, are selectable.

**Example:** When the caller’s TX format is D-PRS Position (Mobile)

D-PRS is a function that simultaneously sends position data received from an external GPS receiver, using the slow speed data packet space, along with voice.

<table>
<thead>
<tr>
<th>TX Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Position (Mobile)</td>
<td>A station operating from a vehicle, or other position, away from its normal base position.</td>
</tr>
<tr>
<td>Position (Base)</td>
<td>A station operating at home or in a building.</td>
</tr>
<tr>
<td>Object</td>
<td>Transmitting Object data such as an earthquake information, satellite track information, and so on. An Object contains a time stamp.</td>
</tr>
<tr>
<td>Item</td>
<td>Transmitting Item data such as a traffic accident, lighthouse, antenna, or DV access point position, and so on. An Item does not contain a time stamp.</td>
</tr>
<tr>
<td>Weather</td>
<td>A station transmitting weather information received from a weather device.</td>
</tr>
<tr>
<td>NMEA</td>
<td>A station transmitting position data (NMEA0183) received from an external GPS receiver.</td>
</tr>
</tbody>
</table>

**Difference between older models** (As of March 2019)

- The GPS TX mode, “GPS (DV-G)” and “GPS-A (DV-A),” are now called as “NMEA (DV-G)” and “D-PRS (DV-A).”
  - GPS (DV-G) → NMEA (DV-G)
  - GPS-A (DV-A) → D-PRS (DV-A)

- For users who have one of the following models:
  (ID-800H, IC-91AD/E91, IC-U82, IC-V82, IC-7100, ID-51A/E, IC-9100, IC-80AD/E80D, ID-880H/E880,
  IC-92AD/E92D, IC-2820H/E2820)
  When you receive a D-PRS position (Base), Object, Item, or Weather information, their data is not displayed.

- Only the ID-51A/E PLUS, ID-51A/E PLUS2, ID-31A/E PLUS, ID-5100A/E, ID-4100A/E, IC-R30, and IC-9700 can receive Power, Height, Gain, and Directivity data.

- For users who have one of the following models:
  (IC-9100, IC-80AD, IC-E80D, ID-880H, ID-E880, IC-92AD, ICE92D, IC-U82, IC-V82)
  If you transmit with the Altitude setting ON, the character string is included in a comment on the products that cannot display the altitude.

- Set the GSV sentence to OFF when sending the GPS message to conventional digital transceivers (IC-2820H, IC-E2820, ID-800H, IC-91AD, IC-E91, IC-V82, IC-U82, IC-2200H). The GSV sentence is incompatible with them.
  They will not display GPS messages properly if sent as a GSV sentence from the IC-9700.
When a received signal contains position data

When a received signal contains position data, the caller’s position data is displayed in the RX position window. See page 10-21 for details.

**Example:** When the signal from JG3LUK contains position data.

When you receive the signal, the RX position data is displayed in the RX position window. After a few seconds, the window disappears. The displayed icon depends on the type of screen (MY, RX, MEM, or ALM).

1. You can turn OFF the caller’s position data indication. **MENU > SET > Display > RX Position Display**
2. You can turn OFF the RX position icon indication. **MENU > SET > Display > RX Position Indicator**

**Checking your position**

You can check your current position. This section is described using received position data. (1) The screens are just examples.

**Displaying Position Data**

1. Push **QUICK** in the standby mode.
2. Touch “GPS Position.”
   - The GPS POSITION screen is displayed.
3. Rotate **MAIN DIAL**
   - My screens (MY), received screens (RX), the GPS Memory channel screen (MEM), and the GPS Alarm channel screen (ALM) are displayed.

4. To close the GPS POSITION screen, push **EXIT**.

**NOTE:** Latitude, longitude, and altitude data may differ, depending on your received GPS signal.

**TIP:**
- If you transmit with the GPS POSITION screen open, the screen is temporarily canceled. To check the position, push **QUICK**, then touch “GPS Position” while transmitting.
- On the MY screen or RX screen, you can enter the displayed position information in a GPS Memory by pushing **QUICK** and touching “GPS Memory.”
- See page 8-21 about the GPS Memory function and see page 8-26 about the GPS Alarm function to know more details.
8. GPS OPERATION (ADVANCED)

Checking your position

*GPS POSITION screens and their meanings*

<table>
<thead>
<tr>
<th>Information</th>
<th>Example</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Pushing <strong>QUICK</strong> to change the compass direction.</td>
<td><strong>Example for the GPS POSITION screens:</strong></td>
<td><strong>Your station</strong> Course: 0 degrees Speed: 0.0 mph</td>
</tr>
<tr>
<td>• About the Course (p. 8-7)</td>
<td></td>
<td><strong>GPS Alarm:</strong> Tokyo Big Sight</td>
</tr>
<tr>
<td>• About the Grid Locator (p. 8-7)</td>
<td></td>
<td><strong>Caller station</strong> (D-PRS: mobile) Course: 95 degrees Speed: 2.3 mph</td>
</tr>
</tbody>
</table>

**MY screen (Your position information)**

When GPS Select is set to “Manual,” compass heading and course direction are not displayed. (p. 8-29)

**RX screen (Caller’s position information)**

Depending on the caller’s GPS TX Mode and TX format, displayed item’s meanings differ, and some data may not be displayed. (p. 8-12)

**Example:** The caller station’s GPS TX Mode is “D-PRS” and its TX format is “Position (Mobile).”

**MEM screen (GPS Memory channel's information)**

* When a name is not entered in the GPS Memory channel, date and time are displayed instead of the name. In the QUICK MENU window, you can change the GPS Memory or GPS Alarm in the GPS POSITION screen. (p. 7-1)
8. GPS OPERATION (ADVANCED)

Checking your position

◊ About the RX screen

**TX format: D-PRS**

**Position (Mobile)**

- For a mobile station, Course and Speed are displayed.

**Object**

- Time that the caller sent the Object’s data.

**Weather**

- Time that the caller acquired the weather data.

- Call sign is displayed with an SSID.
- When the Object or Item's status is finished, “KILLED” is displayed.

**Position (Base)**

- For a base station, Output power, Antenna height, Antenna gain, and Antenna direction are displayed.

**Item**

- For an Item station, Time is not displayed.

**TX format: NMEA**

- Symbol or SSID is not displayed when the TX format is NMEA.
8. GPS OPERATION (ADVANCED)

Checking your position

**Setting the display type (MAIN/SUB)**
You can select the display type for the RX screen.

1. While selecting the RX screen, push **QUICK**.
2. Touch “Display Select(MAIN/SUB).”

```
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Latest (MAIN/SUB)</td>
<td>The last received station’s position information is displayed.</td>
</tr>
<tr>
<td>MAIN</td>
<td>The position information of the station received on the MAIN band is displayed.</td>
</tr>
<tr>
<td>SUB</td>
<td>The position information of the station received on the SUB band is displayed.</td>
</tr>
</tbody>
</table>
```

3. Touch the desired option.

**About the Grid Locator**
Grid Locator (GL) is a position compressed into a 6 character code, calculated by the longitude and the latitude. The locator is simply calculated by dividing the earth surface into squares. It is used to find the area of a transceiver station.

```
<table>
<thead>
<tr>
<th>Field</th>
<th>Square</th>
<th>Subsquare</th>

**The grid locator map of Japan**

**About the Course**
The course displayed on the GPS POSITION screens are indicated in degrees.
8. GPS OPERATION (ADVANCED)

Checking your position

**Changing the GPS Memory or Alarm**
You can change the GPS Memory or GPS Alarm in the GPS POSITION screen.

1. While selecting the MEM screen or ALM screen, push QUICK.
2. Touch “GPS Memory Select,” or touch “Alarm Select.”

3. Select the GPS Memory or GPS Alarm to display on the GPS POSITION screen.
   ① Adding or editing a GPS Memory: p. 8-21
   ② Setting the GPS Alarm: p. 8-26

**Changing the Compass Direction**
You can set the compass direction to Heading Up, North Up, or South Up.

1. While displaying the GPS POSITION screen, push QUICK.
2. Touch “Compass Direction.”
3. Select the compass direction.

- Heading Up: The top is always your course direction.
- North Up: The top is always north.
- South Up: The top is always south.
8. GPS OPERATION (ADVANCED)

Checking your position

◇ Saving your own or a received station’s position
You can save position of your station and the position of the caller station.
The GPS Memory has a total of 300 channels, and the channels can be assigned into one of 27 banks, A ~ Z, and (No Group).

1. Select the screen that you want to save.
   ① To save your own position: MY screen
   ② To save a received position: RX screen
2. Push QUICK.
3. Touch “Add To GPS Memory.”
   ① See pages 8-21 ~ 8-23 for entering details.

4. Touch “<<Add Write>>.”
   ① To select the destination group to be saved, touch “GROUP.”

5. Touch [YES].
   • Saves the data in the GPS Memory, then returns to the GPS POSITION screen.
6. To close the GPS POSITION screen, push EXIT.

TIP: The position is saved in the selected group with the “GROUP” item.

MENU » GPS > GPS Memory
Checking GPS information (Sky view screen)

This screen is used to view GPS satellite information when the GPS icon does not stop blinking for a long time.

The GPS Information displays the quantity, signal power, and position of the GPS satellites. The sky view screen displays the position of GPS satellites. The screen also displays the direction, elevation angle, satellite numbers, and their receiving signal strength status.

1. Push **QUICK**.
2. Touch “GPS Information.”

**About the display**

- ☺: Untracking satellite.
- ➘: Tracking satellite with a weak signal, shown by the satellite number.
- ➘: Tracking satellite with a strong signal, shown by the satellite number.
- SAT: The quantity of tracking satellites.
- Altitude: The altitude of your station. The altitude is only displayed when 4 or more satellites are tracked. When 3 or less satellites are tracked, “------ft” is displayed.
- Longitude/Latitude: Longitude and Latitude of your station.
- Signal strength graph:
  - Signal strength of the satellites
  - ☺: Untracking satellite
  - ➘: Tracking satellite with a weak signal
  - ➘: Tracking satellite with a strong signal

3. To close the GPS INFORMATION screen, push **EXIT**.
Transmitting D-PRS data

When D-PRS is selected as the GPS TX mode, you can transmit D-PRS data. When operating in the D-PRS mode, the following codes are transmitted to the PC. D-PRS code is based on APRS® code. (APRS®: Automatic Packet Reporting System)

D-PRS

D-STAR Packet Reporting System (D-PRS) is a mode that simultaneously sends position data received from an external GPS receiver, using the slow speed data packet space, along with voice audio in the DV mode. In the Analog mode, you can transmit or receive only voice audio or data at one time. However, a D-PRS capable radio can transmit or receive message data or GPS position data at the same time voice is being transmitted or received. I-GATE is required to send position data to the APRS server.

The image of D-PRS

<D-STAR Repeater>

Voice, Messages, and D-PRS positions

<Simplex>

Voice, Messages, and D-PRS positions

D-PRS positions

APRS server

Information from an APRS network

PC

INTERNET

You can check the position on a map site!

Operating in the D-PRS mode

To transmit in D-PRS, follow the steps below, and for more details, see the pages listed along with the steps.

1. “MY” (Your own call sign) entering. (p. 9-3)
2. Receiving GPS data. (p. 7-1)
3. Set GPS TX mode to “D-PRS.” (p. 8-3)
4. Set TX information.
   • You must set SSID and Symbol.

Complete! (You can transmit in the D-PRS mode.)

TIP: In the D-PRS mode, you can transmit earthquake or weather information, in addition to position data.

TX format of D-PRS

- **Position** (Mobile/Base):
  - Used to transmit position data.
- **Object**:
  - Used to transmit specific position data.
  - (Contains a time stamp.)
- **Item**:
  - Used to transmit specific position data.
  - (Does not contain a time stamp.)
- **Weather**:
  - Used to transmit weather information.
8. GPS OPERATION (ADVANCED)

Transmitting D-PRS data

**Display items**
Depending on the TX format, the setting items and displayed order of the items differ.

Transmitting D-PRS data

**Setting D-PRS Position (Mobile/Base)**
Set to transmit as a D-PRS Position (Mobile/Base).
①See page 8-3 for details.

1. **Setting the GPS TX Mode to D-PRS**
   
   MENU » GPS > GPS TX Mode > D-PRS

2. **Checking the Unproto Address**
   You should use the default address, and editing is not recommended.

3. **Setting the TX format to “Position”**

4. **Setting the Symbol**
   Select the Symbol that indicates your operating situation.
   ①See page 8-29 to directly enter the Symbol.

5. **Setting the SSID**
   To assist in identifying your station’s type, add the APRS® (Automatic Packet Reporting System) based SSID after the D-PRS data call sign. (p. 8-30)

6. **Entering a comment**
   Enter a comment, and transmit it with the D-PRS position data.
   ①The number of characters you can enter differs, depending on the data extension and altitude settings. (p. 8-30)
   1. Touch “Comment.”
   2. Push QUICK.
   3. Touch “Edit.”
   4. Enter a comment.
   5. After entering, touch [ENT].
   6. Push EXIT.

7. **Setting the Time Stamp**
   Set the Time Stamp function to transmit the received time data in UTC (Universal Time Coordinated) time. (p. 8-31)

8. **Setting the Altitude**
   Set the altitude data acquired from the GPS receiver. (p. 8-31)
   
   **NOTE:** If you transmit with the altitude setting ON, the character string is included in a comment on the products that cannot display the altitude.

9. **Setting the Data Extension**
   Set the data extension of your station’s information.
   ①Set the Data Extension to “Course/Speed” to transmit as a mobile station.
   ①Set the Data Extension to “Power/Height/Gain/Directivity” to transmit as a base station.

   **When you set the Data Extension to “Power/Height/Gain/Directivity”:**

9-1. **Setting the TX power**
   Select the TX power level of the base station, to transmit along with the position data.

9-2. **Setting the antenna height**
   Select the height of the base station’s antenna, to transmit along with the position data.

9-3. **Setting the antenna gain**
   Select the gain of the base station’s antenna, to transmit along with the position data.

9-4. **Setting the antenna directivity**
   Select the direction the base station’s antenna was pointing, to transmit along with the position data.

14. **Exiting the POSITION screen**
   To close the POSITION screen, push EXIT several times.
   • Returns to the standby screen, then [DV] is displayed.
Transmitting D-PRS data

◇ Setting D-PRS Object/Item
Set to transmit as a D-PRS Object or Item.
① See page 8-3 for details.

1. Setting the GPS TX Mode to D-PRS
MENU » GPS > GPS TX Mode > D-PRS

2. Checking the Unproto Address
You should use the default address, and editing is not recommended.

3. Setting the TX format to “Object” or “Item”

4. Entering Object name or Item name
Enter an Object or Item name, such as an event information or location.

5. Setting Data type
Set the Object or Item’s status.
① For example, if you want to transmit finished event information as an Object, set the Date type to “Killed Object.”

6. Setting the Symbol
Select a symbol that indicates an Object or Item.
① See page 8-29 to directly enter the Symbol.

7. Entering a comment
Enter a comment to transmit as an Object or Item.
① The number of characters you can enter differs, depending on the data extension and altitude settings.
(p. 8-30)
1. Touch “Comment.”
2. Push QUICK.
3. Touch “Edit.”
4. Enter a comment.
① See “Keyboard entering and editing” in the BASIC MANUAL for details.
5. After entering, touch [ENT].
6. Push EXIT.

8. Setting the Position
Set the position data of an Object or Item.
① For example, if you want to transmit traffic accident information as an Item, set the location where the accident has happened.
If the position data is entered in the GPS memory, you can easily set the position data from the memory.

9. Setting the Data Extension
Set the data extension of an Object or Item’s information.
① Set the Data Extension to “Course/Speed” to transmit as a mobile station.
① Set the Data Extension to “Power/Height/Gain/Directivity” to transmit as a base station.

When you set the Data Extension to “Course/Speed”:

9-1. Setting the Course
Set the Object or Item’s course when the station moves.

9-2. Setting the Speed
Set the Object or Item’s speed.

When you set the Data Extension to “Power/Height/Gain/Directivity”:

9-3. Setting the TX power
Select the TX power level of the Object or Item if the station is a repeater, node, access point, and so on and an antenna is installed.

9-4. Setting the antenna height
Select the height of the Object or Item’s antenna.

9-5. Setting the antenna gain
Select the gain of the Object or Item antenna.

9-6. Setting the antenna directivity
Select the direction the base Object or Item’s antenna was pointing.

10. Setting the SSID
To assist in identifying a station’s type, the displayed APRS® (Automatic Packet Reporting System) based SSID is added after the D-PRS data call sign.
The way to add SSID’s differs, depending on whether you enter a space in your call signs or not.
8. GPS OPERATION (ADVANCED)

Transmitting D-PRS data

◇ Setting D-PRS Object/Item

11. Setting the Time Stamp
   ① This item is displayed when the TX format is “Object.”
   Set the time stamp function to transmit the Object’s time data in UTC (Universal Time Coordinated) time.

12. Exiting the OBJECT or ITEM screen
   To close the OBJECT or ITEM screen, push EXIT several times.
   • Returns to the standby screen, then D is displayed.

◇ Setting D-PRS Weather
   Set to transmit as a D-PRS Weather station.
   ① See page 8-16 for details.

   1. Setting the GPS TX Mode to D-PRS
      MENU » GPS > GPS TX Mode > D-PRS

   2. Checking the Unproto Address
      You should use the default address, and editing is not recommended.

   3. Setting the TX format to “Weather”

   4. Setting the Symbol
      Select a symbol that indicates the weather station.
      ① See page 8-29 to directly enter the Symbol.

   5. Setting the SSID
      To assist in identifying a station’s type, the displayed APRS® (Automatic Packet Reporting System) based SSID is added after the D-PRS data call sign.
      The way to add SSID’s differs, depending on whether you enter a space in your call signs or not.

   6. Entering a comment
      Enter a comment to transmit as a D-PRS Weather station.

      1. Touch “Comment.”
      2. Push QUICK.
      3. Touch “Edit.”
      4. Enter a comment.
         ① See “Keyboard entering and editing” in the BASIC MANUAL for details.
      5. After entering, touch [ENT].
      6. Push EXIT.

   7. Setting the Time Stamp
      Set the time stamp function to transmit the received time data in UTC (Universal Time Coordinated) time.

   8. Exiting the WEATHER screen
      To close the WEATHER screen, push EXIT several times.
      • Returns to the standby screen, then D is displayed.
8. GPS OPERATION (ADVANCED)

Transmitting D-PRS data

Weather station transmission
When you transmit as a weather station, you should set the weather station’s settings, and input the weather data to the [DATA] jack.
You can input the weather data from a third party’s weather device by converting it to the APRS weather format in your PC or microcomputer.

After completing the weather station’s settings, and inputting the weather data, you can transmit as a weather station.

NOTE: If the weather data is not input to the [DATA] jack, you cannot transmit as a weather station.

Application setting
Configure the communication software as follows.
- Port: The COM port number that is used by the IC-9700.*1
- Baud rate: 4800/9600 bps*2
- Data: 8 bit
- Parity: none
- Start: 1 bit
- Stop: 1 bit
- Flow control: none

*1 Depending on the PC environment, the COM port number used by the IC-9700 may be higher than 5. In that case, use an application that can set it to higher than 5.
*2 Set the baud rate in DV Data/GPS Out Baud Rate.

MENU > SET > Connectors > USB (B)/DATA Function > DV Data/GPS Out Baud Rate

About the weather data content
The weather data should be input according to the format (based on the APRS® Weather Data) as shown below.

Example:
220/004 g005 t077 r000 p000 P000 h50 b999000 End code

<table>
<thead>
<tr>

</tbody>
</table>

*1 The last two digits indicate the two decimal place.
*2 The last digit indicates the one decimal place.

1. If you have no data, enter a space or “.” (period) instead of a number.
   (Example: “.../...g...t077r000p...P...h50b...”)
2. Enter <CR>, <LF> or <CR><LF> for an end code.
8. GPS OPERATION (ADVANCED)

Transmitting D-PRS data

Displaying your position using a mapping software
If you transmit to an I-GATE station, and then enter the call sign information on the Internet map website, the selected symbol is displayed.

Example: Check your position on the APRS.fi site.

1. Display a free APRS® related map site on the Internet.
   Example: http://aprs.fi/
2. Enter your call sign in the “Track callsign” field.
3. Click <Search>.
   • The icon (D-PRS symbol) is displayed on the map site.

Enter your call sign, and then click <Search>.

→ Your symbol and your call sign
8. GPS OPERATION (ADVANCED)

Transmitting D-PRS data

Note: D-PRS data are used for various purposes, including navigation, location tracking, and weather monitoring. The data format allows for detailed information to be transmitted, including position coordinates, time stamps, and additional data such as object and item names, data types, and data extension codes.
8. GPS OPERATION (ADVANCED)

Transmitting NMEA data

Set a GPS sentence to transmit GPS data in the DV mode.

Setting the GPS data sentence
1. Open the NMEA SET screen.
   
   MENU » GPS > GPS TX Mode > NMEA

2. Touch “GPS Sentence.”

3. Select the GPS sentence.
   • Displays “✓” when the sentence is set to ON.
   ① The selectable GPS sentences are RMC, GGA, GLL, VTG, GSA, and GSV. The GGA sentence is set to ON as the default GPS sentence.
   ② Pushing QUICK and touching “Default” returns to the default setting.

4. Repeat step 3 to set the GPS sentence.
   ① Up to 4 GPS sentences can be set at a time.

5. To close the NMEA SET screen, push EXIT several times.
   • Returns to the standby screen, then DV is displayed.

NOTE:
• Set GSV Sentence to “OFF” when sending the GPS message to a conventional digital transceivers.
• If GPS Select is set to “Manual,” the transceiver automatically sets the NMEA sentence, and transmits it along with the manually entered position data in Manual Position.
   MENU » GPS > GPS Set > GPS Select
   MENU » GPS > GPS Set > Manual Position
   • Note that if GPS Auto TX is set to any other option than “OFF,” data is automatically transmitted according to the set time.
   MENU » GPS > GPS Auto TX
   ① If GPS Select is set to “OFF” or “Manual,” the GPS Automatic Transmission function is not activated.

8. GPS OPERATION (ADVANCED)

Transmitting NMEA data

Setting the GPS data sentence
Enter a GPS message to be transmitted with the position data.

Example: Entering “Japan TOM”

1. Open the NMEA SET screen.
   
   1. Touch "GPS Message."
   
   3. Touch [EDIT].
   
   4. Enter a GPS message of up to 20 characters.
   
   5. After entering, touch [ENT].
   
   6. To close the NMEA SET screen, push EXIT several times.

GPS Automatic Transmission

NOTE:  
- Use the GPS Automatic Transmission function in only the Simplex mode.
- Using the function through a Repeater may interfere with other communications.

You can set the GPS Automatic Transmission function in the following menu.

MENU ➔ GPS > GPS Auto TX

If you set this function, GPS data is automatically transmitted according to the set time.
- This function is not activated if your call sign (MY) is not entered in the transceiver.
- If GPS Select is set to “OFF” or “Manual,” this function is not activated.
8. GPS OPERATION (ADVANCED)

GPS Memory

You can add GPS data to GPS Memory. You can add your own position, other station’s position, or any positions that are manually entered.

You can save the GPS Memory up to 300 channels, and conveniently saved in up to 27 groups, from A ~ Z and "(No Group)." The A to Z groups can also be named.

Adding a GPS Memory

Example: Add “HOME” into (No Group)

1. Adding a GPS Memory and entering the edit mode
   1. Open the GPS MEMORY screen.
   2. Touch "(No Group)."
   3. Push QUICK.
   4. Touch "Add."

   • The GPS MEMORY EDIT screen is displayed.

   TIP: To edit the previously saved GPS Memory, touch “Edit” in step 4. You can enter the content in the same way as described above.

2. Entering a GPS Memory name
   1. Touch “NAME.”
   2. Enter a GPS Memory name of up to 16 characters. (Example: HOME)
   3. After entering, touch [ENT].

3. Entering the GPS Memory date
   1. Touch “DATE.”
   2. Touch a digit to enter.
   3. Touch [+ ] and [- ].
   4. Repeat step 2 and 3 to enter the date.

4. Entering the GPS Memory time
   1. Touch “TIME.”
   2. Touch a digit to enter.
   3. Touch [+ ] and [- ].
   4. Repeat step 2 and 3 to enter the time.

5. After entering, push [EXIT].
8. GPS OPERATION (ADVANCED)

GPS Memory

Adding a GPS Memory

5. Entering the GPS Memory latitude
1. Touch “LATITUDE.”
2. Touch a digit to enter.
3. Enter the latitude.
   ① Set to between 0°00.00’ to 90°00.00’.
   ② You can change the unit to “ddd°mm'ss”.

   MENU » SET > Display > Display Unit > Latitude/Longitude

4. Repeat steps 2 and 3 to enter the latitude.

5. Touch [N/S] to set to a north latitude (N) or a south latitude (S).
6. After entering, touch [ENT].

6. Entering the GPS Memory longitude
1. Touch “LONGITUDE.”
2. Touch a digit to enter.
3. Enter the longitude.
   ① Set to between 0°00.00’ to 180°00.00’.
   ② You can change the unit to “ddd°mm'ss”.

   MENU » SET > Display > Display Unit > Latitude/Longitude

4. Repeat steps 2 and 3 to enter the longitude.

5. Touch [E/W] to set to an east longitude (E) or a west longitude (W).
6. After entering, touch [ENT].

7. Entering the GPS Memory altitude
1. Touch “ALTITUDE.”
2. Touch [+/−] to set to plus or minus.
3. Enter the altitude.
   ① Set to between −32808 and +32808 feet.

4. After entering, touch [ENT].

8. Selecting a GPS Memory group
1. Touch “GROUP.”
2. Touch the group between (No Group) and A ~ Z.
   ① You can save up to 300 Memories in each group.
GPS Memory

◇ Adding a GPS Memory

9. Writing the GPS Memory

1. Touch "<<Add Write>>."

2. Touch [YES].
   - The data is added to the GPS memory, and then the selected GPS Memory group screen is displayed.

3. To close the GPS Memory group screen, push EXIT several times.

TIP:
To view the entered content:
Touch the GPS Memory channel. Rotate MAIN DIAL to check the whole content.

To cancel the entered data:
While entering or editing the GPS Memory, push EXIT to display the confirmation dialog. Touch [YES] to cancel entering and the display returns to the GPS Memory group screen.

◇ Entering the GPS Memory group name

You can enter a name for each GPS Memory group.

1. Open the GPS MEMORY screen.

2. Touch the group that the name to be entered for 1 second.

3. Touch “Edit Name.”

4. Enter a group name of up to 16 characters.

5. After entering, touch [ENT].

6. To close the GPS MEMORY screen, push EXIT several times.
Deleting GPS Memory
You can delete the GPS Memories.
There are 2 ways to delete the Memories:
• Deletes all GPS Memory in a group.
• Deletes a specific GPS Memory.

NOTE: Deleted GPS Memories cannot be restored.

Example: Deleting all in the Group E.

1. Open the GPS MEMORY screen.
   MENU » GPS > GPS Memory
2. Touch the group where the GPS Memory to delete is saved for 1 second.

   ![GPS Memory Screen]

3. Touch “Delete All In Group.”

   ![Delete All In Group]

4. Touch [YES].
   • All GPS Memory in the selected group are deleted,
     then returns to the GPS MEMORY screen.
     ① When selecting a blank group, “Blank” is displayed.
5. To close the GPS MEMORY screen, push EXIT several times.

TIP: Deleting a specific GPS Memory
You can delete a specific GPS Memory.
1. Touch the GPS Memory to delete.
2. Touch “Delete.”

   ![Delete Options]

3. Touch [YES].
   • The selected GPS Memory is deleted.
8. GPS OPERATION (ADVANCED)

GPS Memory

◊ Rearranging the display order of the GPS data
You can move the entered GPS Memories to rearrange their display order in the selected GPS Memory group.
① In order to move the GPS Memory out of their assigned Memory group, edit and move, and then save.

1. Open the GPS MEMORY screen.

2. Touch the group where the GPS Memory you want to move is saved.

3. Touch the GPS Memory to move for 1 second.

4. Touch “Move.”

5. Touch the position to insert the Memory you want to move.
   • The selected Memory is inserted above the destination Memory name.
   ① If you select “<<Move End>>,” the Memory is moved to the bottom of the group.

6. To close the GPS MEMORY screen, push EXIT several times.

• “DESTINATION” blinks at the top the screen.
GPS Alarm

The transceiver can sound a GPS Alarm when a target station or position comes into the alarm area. This function can be set to a caller station, all GPS Memories, a selected GPS Memory group, or a selected GPS Memory.

Alarm Area (Group) (Setting plural stations)
When “All Memories” or a GPS Memory group is selected:

Alarm Area (RX/Memory) (Setting specific station)
When a specific GPS Memory is selected:
8. GPS OPERATION (ADVANCED)

GPS Alarm

Setting the GPS Alarm function to All Memories (all GPS Memories)

1. Open the GPS ALARM screen.

2. Touch “Alarm Select.”

3. Touch “Group.”

4. Touch “All Memories.”

5. To close the GPS ALARM screen, push EXIT several times.

Information

- When either one of the stations in the group enters the set range, the alarm sounds 3 times.
- When the transceiver sounds a GPS Alarm, “GPS ALARM” pops up on the screen, and “GPS ALARM” blinks. See the illustration below.
- To cancel the GPS Alarm function, touch “OFF” in step 3 to the left.

Tip: When selecting “All Memories,” “No Group,” or a GPS Memory group (A ~ Z) in step 4 to the left, you also have to set Alarm Area (Group) to use the GPS Alarm function.

If you want to set the alarm to a specific GPS Memory group, touch “(No Group)” or “A” to “Z.”
8. GPS OPERATION (ADVANCED)

GPS Alarm

Setting the GPS Alarm function to RX (a caller station)

1. Open the GPS ALARM screen.

2. Touch “Alarm Select.”

3. Touch “RX.”

4. To close the GPS ALARM screen, push EXIT several times.

Information

- When a station with its GPS Alarm set enters within an approximate 1 kilometer (1094 yard) range, the alarm sounds once. When it enters within an approximate 500 meter (547 yard) range, the alarm sounds 3 times.
- When the transceiver sounds a GPS Alarm, “GPS ALARM” pops up on the screen, and “ annunciates. See the illustration below.
- To cancel the GPS Alarm function, touch “OFF” in step 3 to the left.

**NOTE:** Even if “RX” is selected in step 3, when the received signal has no position data, the GPS Alarm does not sound.

TIP: When selecting “RX” or a specific GPS Memory in step 3 to the left, you also have to set Alarm Area (RX/Memory) to use the GPS Alarm function.
8. GPS OPERATION (ADVANCED)

GPS SET

NOTE: The default settings shown below are for the USA transceiver version. The default settings may differ, depending on your transceiver version. To return to your transceiver version's default settings, push **QUICK** and touch "Default" returns to the default setting.

**GPS Set Menu**

**GPS Select**  
(Default: External GPS)  
Select how to capture position data.  
- **OFF**: A GPS receiver is not used.  
- **External GPS**: Position data of an external GPS receiver is used for the GPS functions.  
- **Manual**: Manually enter the current Latitude, Longitude, and Altitude in Manual Position.

**GPS Receiver Baud Rate**  
(Default: 9600)  
Select the baud rate of the GPS receiver.

**Manual Position**  
(Latitude: 0°00.00’N, Longitude: 0°00.00’W, Altitude: ------ft)  
Manually enter the latitude, longitude, and Altitude of your current position.  
- You can capture position data from the GPS receiver if "Capture From GPS" is selected.

**GPS TX Mode**  
(Default: OFF)  
Select a GPS transmission mode to send a GPS position data while in the DV mode.  
- **OFF**: Does not transmit a GPS data.  
- **D-PRS**: Transmits GPS data in the D-PRS format.  
- **NMEA**: Transmits a GPS data in the NMEA format.

**Unproto Address**  
(Default: API9700,DSTAR*)  
Displays an unproto address of up to 56 alphanumeric characters.  
**NOTE:** You should use the default address, and editing is not recommended.

**TX Format**  
(Default: Position)  
Select the format to transmit the position data in the D-PRS mode.  
- **Position**: The caller station is the mobile or base station.  
- **Object**: Transmits a certain location’s information, such as an event, earthquake, and so on. (time stamp data is included.)  
- **Item**: Transmits repeater or antenna information that needs no time information. (time stamp data is not included.)  
- **Weather**: Transmits weather information received from a weather device.

**Symbol**  
(Default: House QTH (VHF))  
Select the symbol that indicates your operating situation. The selected symbol channel's symbols (1~4) are transmitted along with the position data.

**Editing a symbol**  
1. Touch the symbol channel for 1 second.  
2. Touch "Edit Symbol."  
3. Push **QUICK**.  
4. Touch "Direct Input."  
5. Touch [+]/[−] to edit the second digit.  
6. Touch [+]/[−] to edit the first digit.

**Selectable characters and symbols**

<For the first digit>: /, \, 0 to 9, A to Z

<For the second digit>: A to Z, a to z, 0 to 9, ! " # $ % & ’ ( ) * + , - . / : ; < = > ? @ [ ] _ ^ ‘ { | } ˜

7. After selecting, touch [SET].  
- Sets the Symbol into the channel selected in step 1.

**Selecting a preset symbol**  
1. Touch the symbol channel for 1 second.  
2. Touch "Edit Symbol."  
3. Touch the symbol.  
- Sets the Symbol into the channel selected in step 1.
8. GPS OPERATION (ADVANCED)

GPS SET

**MENU** > GPS > GPS TX Mode > D-PRS >
TX Format > Position

**SSID** (Default: ---)
Select an SSID based on APRS® to add to your call sign, to show your operating style to other stations. The addition methods of the SSID differ, depending on whether the call sign includes a space or not.

- ---: The space in call sign is converted to ".".
  1. If no text is entered after the space, the space will be deleted, and the space is not converted to ".".
  **Example:** JA3YUA → JA3YUA
  JA3YUA A → JA3YUA-A

- (-0): No SSID is added.
  1. If a call sign includes a space, any text or digit after the space will be deleted.
  **Example:** JA3YUA → JA3YUA
  JA3YUA A → JA3YUA-A

- -1~15: Adds an SSID of -1 to -15 to your call sign.
  1. **Example:** SSID is ".9."
  JA3YUA → JA3YUA-9
  JA3YUA A → JA3YUA-9

- -A~Z: Adds an SSID of -A to -Z to your call sign.
  1. **Example:** SSID is ".Z."
  JA3YUA → JA3YUA-Z
  JA3YUA A → JA3YUA-Z

**TIP: About the SSID**
To assist in identifying a station’s type, designated call sign SSIDs are used in D-PRS (or APRS®), according to a common guideline. The guideline may be changed when the infrastructure environment, such as a product or network, is changed. Please check the latest guideline in the web site related to D-PRS and APRS®, and correctly set.

http://aprs.org/aprs11/SSIDs.txt

**Comment**
Enter a comment to transmit it with the D-PRS position data. You can enter up to four comments. The number of characters you can enter differs, depending on the Data Extension and Altitude settings.

Transmittable comment range display (In case of up to 28 characters)
8. GPS OPERATION (ADVANCED)

**GPS SET**

**Time Stamp** (Default: OFF)
Select the transmitting time stamp type.
The time stamp is transmitted with position data in the D-PRS mode, and UTC (Universal Time Coordinated) time is used.
- **OFF**: Does not transmit the time information.
- **DHM**: Transmits the time stamp in the Day, Hour, and Minute format.
- **HMS**: Transmits the time stamp in the Hour, Minute, and Second format.

**Altitude** (Default: OFF)
Select whether or not to transmit altitude data with the position data in the D-PRS mode.
The number of characters you can enter in “Comment” differs, depending on the “Altitude” and “Data Extension” settings.
- **OFF**: No altitude data is transmitted.
- **ON**: Transmits altitude data with position data.

**Data Extension** (Default: OFF)
Select whether or not to transmit the Course/Speed data with position data in the D-PRS mode.
The number of characters you can enter in “Comment” differs, depending on the “Altitude” and “Data Extension” settings.
- **OFF**: Does not transmit any information.
- **Course/Speed**: Transmits the course and speed data with the position data.
- **Power/Height/Gain/Directivity**: Transmits the TX power level, height, antenna gain and antenna direction, along with the position data.

**Power** (Default: 0W)
Select the TX power level of the base station, to transmit along with the position data.
This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”
Options: Set to between 0, 1, 4, 9, 16, 25, 36, 49, 64, and 81 W.

**Height** (Default: 10ft)
Select the height of the base station’s antenna, to transmit along with the position data.
This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”
Options: Set to between 10, 20, 40, 80, 160, 320, 640, 1280, 2560, and 5120 feet.*
* If the Altitude/Distance unit is set to “m,” select between 3, 6, 12, 24, 49, 98, 195, 390, 780, and 1561 meters.

**Gain** (Default: 0dB)
Select the gain of the base station’s antenna, to transmit along with the position data.
This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”
Options: Set to between 0 and 9 dB.

**Object Name**
Enter an Object name of up to 9 characters.

**Data Type** (Default: Live Object)
Set the Object’s status.
- **Live Object**: The Object is valid.
- **Killed Object**: The Object is invalid.

**Symbol** (Default: Radio)
The symbol is an icon which represents Object’s means of transportation or location. The saved symbol is transmitted along with the position data while in the D-PRS mode.
See page 8-29 for details of editing a symbol.

Transmittable comment range display (In case of up to 28 characters)

Position
(Default: LATITUDE: 0°00’00”N, LONGITUDE: 0°00’00”E, ALTITUDE: ————ft)

Displays the position information of the Object. Push [QUICK] to open the window shown below.

TIP: When you select “Capture From GPS” or “Set From GPS Memory,” you can capture the position from the GPS, or set the Object’s position from the GPS memory.

Entering the position information manually
1. Touch “Edit” on QUICK MENU. • The POSITION EDIT screen is displayed.
2. Touch “LATITUDE.”
3. Enter a latitude.
   ① Touch “N/S” to switch the north latitude and the south latitude.
4. Touch [ENT].
5. Touch “LONGITUDE.”
6. Enter a longitude.
   ① Touch “E/W” to switch the east longitude and the west longitude.
7. Touch [ENT].
8. Touch “ALTITUDE.”
9. Enter an altitude.
   ① After entering, touch [+/−] to switch “+” and “−.”
10. Touch [ENT].
11. Touch “<<Write>>.”
12. Touch “YES.” • The position information is entered.
Data Extension (Default: OFF)
Select whether or not to transmit the Course/Speed data or Power/Height/Gain/Directivity data along with the position data in the D-PRS mode.

- OFF: Does not transmit any information.
- Course/Speed: Transmits the course and speed data with the position data.
- Power/Height/Gain/Directivity: Transmits the TX power level, Height, Gain and Directivity data, along with the position data.

L The number of characters you can enter in “Comment” differs, depending on the “Altitude” and “Data Extension” settings.

L The course and speed data is not transmitted when your position is manually set.

L The Power, Height, Gain and Directivity data is transmitted even if your location is manually set.

Course (Default: 0º)
Set the Object’s course to between 0º and 360º.

L This item is displayed when “Data Extension” is set to “Course/Speed.”

Speed (Default: 0mph)
Set the Object’s speed to between 0 and 1150 mph.*

L This item is displayed when “Data Extension” is set to “Course/Speed.”

L If the Speed unit is set to “km/h,” select between 0 to 1850 km/h, or set to “knots,” select between 0 and 999 knot.

L The Power, Height, Gain and Directivity data is transmitted even if your location is manually set.

Power (Default: 0W)
Select the TX power level of Object, to transmit along with the position data.

L This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”

L The Power, Height, Gain and Directivity data is transmitted even if your location is manually set.

Options: Set to between 0, 1, 4, 9, 16, 25, 36, 49, 64, and 81 W.

Height (Default: 10ft)
Select the height of the Object’s antenna, to transmit along with the position data.

L This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”

Options: Set to between 10, 20, 40, 80, 160, 320, 640, 1280, 2560, and 5120 feet.*

L If the Altitude/Distance unit is set to “m,” select between 3, 6, 12, 24, 49, 98, 195, 390, 780, and 1561 meters.

Gain (Default: 0dB)
Select the gain of the Object’s antenna, to transmit along with the position data.

L This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”

L Options: Set to between 0 and 9 dB.

Directivity (Default: Omni)
Select the direction the Object’s antenna was pointing, to transmit along with the position data.

L This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”

L Options: Set to between Omni, 45º NE, 90º E, 135º SE, 180º S, 225º SW, 270º W, 315º NW and 360º N.

SSID (Default: ---)
Select an SSID based on APRS® to add to your call sign, to show your operating style to other stations.

L The addition methods of the SSID differ, depending on whether the call sign includes a space or not.

L See page 8-30 for details of the SSID.

- ---: The space in call sign is converted to “-.”
- (-0): No SSID is added.
- -1~15: Adds an SSID of -1 to -15 to your call sign.
- -A~Z: Adds an SSID of -A to -Z to your call sign.

Time Stamp (Default: OFF)
Select the transmitting time stamp type.

L The time stamp is transmitted with position data in the D-PRS mode, and UTC (Universal Time Coordinated) time is used.

L Options: Set to between DHM: Transmits the time stamp in the Day, Hour, and Minute format.

L HMS: Transmits the time stamp in the Hour, Minute, and Second format.

Item Name
Enter an Item name of up to 9 characters.

Data Type (Default: Live Item)
Set the Item’s status.

L Live Item: The Item is valid.

L Killed Item: The Item is invalid.

Symbol (Default: Radio)
The symbol is an icon which represents Item’s means of transportation or location. The saved symbol is transmitted along with the position data while in the D-PRS mode.

L See page 8-29 for details of editing a symbol.

**Position**
( Default: LATITUDE: 0°00'00"N, LONGITUDE: 0°00'00"E, ALTITUDE: ----ft)
Displays the position information of the Item.
Push [QUICK] to open the window shown below.

**Data Extension**  (Default: OFF)
Select whether or not to transmit the Course/Speed data or Power/Height/Gain/Directivity data along with the position data in the D-PRS mode.

- **OFF:** Does not transmit any information.
- **Course/Speed:** Transmits the course and speed data with the position data.
  - The course and speed data is not transmitted when your position is manually set.
- **Power/Height/Gain/Directivity:** Transmits the TX power level, Height, Gain and Directivity data, along with the position data.
  - The Power, Height, Gain and Directivity data is transmitted even if your location is manually set.

**Course**  (Default: 0°)
Set the Item’s course to between 0° and 360°.
- This item is displayed when “Data Extension” is set to “Course/Speed.”

**Speed**  (Default: 0mph)
Set the Item’s speed to between 0 and 1150 mph.*
- If the Speed unit is set to “km/h,” select between 0 to 1850 km/h, or set to “knots,” select between 0 and 999 knot.
- This item is displayed when “Data Extension” is set to “Course/Speed.”

**Power**  (Default: 0W)
Select the TX power level of Item, to transmit along with the position data.
- This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”
Options: Set to between 0, 1, 4, 9, 16, 25, 36, 49, 64, and 81 W.

**Height**  (Default: 10ft)
Select the height of the Item’s antenna, to transmit along with the position data.
- This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”
Options: Set to between 10, 20, 40, 80, 160, 320, 640, 1280, 2560, and 5120 feet.*
- If the Altitude/Distance unit is set to “m,” select between 3, 6, 12, 24, 49, 98, 195, 390, 780, and 1561 meters.

---

TIP: When you select “Capture From GPS” or “Set From GPS Memory,” you can capture the position from the GPS, or set the Object’s position from the GPS memory.

- See “Entering the position information manually” (p. 8-32) for details.
8. GPS OPERATION (ADVANCED)

GPS SET

**Gain** *(Default: 0dB)*
Select the gain of the Item’s antenna, to transmit along with the position data.

- This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”

**Options:** Set to between 0 and 9 dB.

**Directivity** *(Default: Omni)*
Select the direction the Item’s antenna was pointing, to transmit along with the position data.

- This item is displayed when “Data Extension” is set to “Power/Height/Gain/Directivity.”

**Options:** Set to between Omni, 45º NE, 90º E, 135º SE, 180º S, 225º SW, 270º W, 315º NW and 360º N.

**SSID** *(Default: ---)*
Select an SSID based on APRS® to add to your call sign, to show your operating style to other stations.

- The addition methods of the SSID differ, depending on whether the call sign includes a space or not.

- See page 8-30 for details of the SSID.

- **---:** The space in call sign is converted to “-.”
- **(-0):** No SSID is added.
- **-1~15:** Adds an SSID of -1 to -15 to your call sign.
- **-A~Z:** Adds an SSID of -A to -Z to your call sign.

**Symbol** *(Default: Radio)*
The symbol is an icon which represents weather station’s means of transportation or location. The saved symbol is transmitted along with the position data while in the D-PRS mode.

- See page 8-29 for details of editing a symbol.

**SSID** *(Default: ---)*
Select an SSID based on APRS® to add to your call sign, to show your operating style to other stations.

- The addition methods of the SSID differ, depending on whether the call sign includes a space or not.

- See page 8-30 for details of the SSID.

- **---:** The space in call sign is converted to “-.”
- **(-0):** No SSID is added.
- **-1~15:** Adds an SSID of -1 to -15 to your call sign.
- **-A~Z:** Adds an SSID of -A to -Z to your call sign.

**Comment**
Enter a comment of up to 43 characters.

**Time Stamp** *(Default: OFF)*
Select the transmitting time stamp type.

- The time stamp is transmitted with position data in the D-PRS mode, and UTC (Universal Time Coordinated) time is used.

- **OFF:** Does not transmit the time information.
- **DHM:** Transmits the time stamp in the Day, Hour, and Minute format.
- **HMS:** Transmits the time stamp in the Hour, Minute, and Second format.
GPS SET

**GPS Sentence**

Select sentences to be transmitted in the GPS mode to transmit position data. Set to between RMC, GGA, GLL, VTG, GSA, and GSV.

**NOTE:** Set the GSV sentence to OFF when sending the GPS message to conventional digital transceivers. The GSV sentence is incompatible with them.

**Information**
- Up to 4 GPS sentences can be set at a time.
- Displays “✓” when the sentence is set to ON.
- Even if GPS Auto TX is set to “5 sec,” when 4 sentences are selected, the time is automatically changed to “10 sec.” (p. 8-41)
- “VTG,” “GSA,” and “GSV” sentences is not transmitted when your position has been manually set.

**GPS Message**

Enter a GPS message of up to 20 alphanumeric characters. (p. 8-20)

**NOTE:** When you do not want to send a message, delete the entered message.

**GPS Information**

Displays the GPS satellite direction, elevation angle, satellite number, and receiving status. (p. 8-10)

---

**TIP: Contents of GPS sentence**

The Time Stamp is displayed based on the UTC (Universal Time Coordinated) time.

GPS SET

MENU ➔ GPS

GPS Position
Your current position, received position, or GPS Memory Alarm position information is displayed. (p.8-26)
Rotating [MAIN DIAL] selects the MY, RX, MEM, and ALM screens.

MY screen (MY Position)
- Compass*1: Displays your direction.
- Latitude: Displays your latitude.
- Longitude: Displays your longitude.
- GL: Displays the grid locator based on the latitude and longitude of your position.
- ALT: Displays your own altitude.
- SPEED: Displays your speed over ground.
- TIME: Displays current time received from the GPS.
- COURSE: Displays your direction heading.

① When GPS Select is set to “Manual,” the screen displays only latitude, longitude, altitude, GL (Grid locator), and time (internal clock).

RX screen (Received position of the other station)
Depending on the caller’s TX mode or TX format, the displayed items and these meanings are different.
The following lists describe the items for each category.
No data is displayed when no position data is received on your transceiver.

<1. When the caller’s TX mode is NMEA>
- Compass*1: Displays the caller’s direction from your position.
- Latitude: Displays the caller’s latitude.
- Longitude: Displays the caller’s longitude.
- GL: Displays the grid locator based on the latitude and longitude of the caller’s position.
- ALT: Displays the caller’s altitude.
- DIFF: Displays the caller’s distance from your position.
- COURSE: Displays the caller’s direction over ground.
- SPEED: Displays the caller’s speed.
- GPS Time Stamp: Displays the time that the caller acquired the position data.
- Call sign: Displays the caller’s call sign.

<2. When the caller’s TX format is D-PRS Position (Mobile station)>
- Compass*1: Displays the caller’s direction from your position.
- Latitude: Displays the caller’s latitude.
- Longitude: Displays the caller’s longitude.
- GL: Displays the grid locator based on the latitude and longitude of the caller’s position.
- ALT: Displays the caller’s altitude.
- DIFF: Displays the caller’s distance from your position.
- COURSE: Displays the caller’s direction over ground.
- SPEED: Displays the caller’s speed.
- Symbol: Displays the caller’s D-PRS symbol.
- SSID: Displays the caller’s SSID.
- GPS Time Stamp: Displays the time that the caller acquired the position data.
- Call sign: Displays the caller’s call sign (with SSID).

*1 You can change the direction in the Quick Menu window.
### GPS Position (continued)

GPS Position (continued)

<5. When the caller’s TX format is D-PRS Weather>

| Compass*1 | Displays the caller’s direction from your position. |
| Latitude  | Displays the caller’s latitude. |
| Longitude | Displays the caller’s longitude. |
| GL        | Displays the grid locator based on the latitude and longitude of the caller’s position. |
| DST       | Displays the caller’s distance from your position. |
| TEMP      | Displays the temperature of the caller station’s area. |
| RAIN      | Displays the rainfall of the caller station’s area. |
| WIND DIR  | Displays the wind direction of the caller station’s area. |
| WIND SPD  | Displays the wind speed of the caller station’s area. |
| BARO      | Displays the barometric pressure of the caller station’s area. |
| HUMI      | Displays the humidity of the caller station’s area. |
| Symbol    | Displays the caller station’s D-PRS symbol. |
| SSID      | Displays the caller’s SSID. |
| GPS Time Stamp | Displays the time that the caller acquired the position data. |
| Call sign | Displays the caller’s call sign (with SSID). |

MEM screen (GPS memory alarm position)

| Compass*1 | Displays GPS Memory channel’s direction from your position. |
| Latitude  | Displays GPS Memory channel’s latitude. |
| Longitude | Displays GPS Memory channel’s longitude. |
| GL        | Displays the grid locator based on the latitude and longitude of GPS Memory channel’s. |
| DST       | Displays GPS Memory channel’s distance from your position. |
| GPS memory name*2 | Displays the selected GPS memory name. |

ALM screen (GPS alarm position)

| Compass*1 | Displays GPS Alarm area’s direction from your position. |
| Latitude  | Displays GPS Alarm area’s latitude. |
| Longitude | Displays GPS Alarm area’s longitude. |
| GL        | Displays the grid locator based on the latitude and longitude of GPS Alarm area’s. |
| DST       | Displays GPS Alarm area’s distance from your position. |
| GPS Alarm*2 | Displays “RX,” GPS memory group name, or GPS memory name specified for the GPS Alarm function. |

*1 You can change the direction in the Quick Menu window.
*2 You can change these items in the Quick Menu window.
GPS OPERATION (ADVANCED)

GPS SET

MENU » GPS

GPS Memory
The transceiver has 300 GPS Memory channels to save the received position data, or often-used position data, with an alphanumeric channel name. The channels can be divided into the "(No Group)" group and each Memory group (A to Z) for easy Memory management.

The display of the GPS Memory

| (No Group) | GPS Memories not assigned to any group |
| A ~ Z : Group Name | GPS Memories assigned to the selected group |

GPS Memory Groups (A ~ Z)

| GROUP NAME | GPS Memory Group name (Up to 16 alphanumeric characters) |

① You can edit the GPS Memory Group name. (p. 8-40)

GPS Memory channels

| NAME | GPS memory channel name (Up to 16 alphanumeric characters) |
| DATE | Saved date |
| TIME | Saved time |
| LATITUDE | Saved position (latitude) |
| LONGITUDE | Saved position (longitude) |
| ALTITUDE | Saved altitude |
| GROUP | The group letter and the name of the group |

① When you save the received position data on the GPS POSITION screen, the received station's call sign is used as the GPS Memory name.
① In the Quick Menu window, you can edit the GPS Memory contents, such as the GPS Memory name.

MENU » GPS > GPS Alarm

Alarm Select  (Default: OFF)
Select the target positions for the GPS Alarm function.

• OFF: Turns OFF the function.
• RX: The GPS Alarm sounds when a target (the last received position) enters in your active alarm range.
• Group: The GPS Alarm sounds when a target (positions in the GPS Memory, or in the selected GPS Memory Group) enters in your active alarm range.
• Memory: The GPS Alarm sounds when a target (the entered position in the GPS Memory) enters in the active alarm range.

Alarm Area (Group)  (Default: 0.25')
Set the GPS active alarm range. When a target enters in this set active alarm range, the GPS Alarm sounds and the GPS Alarm icon blinks.
① When Alarm Select is set to “Group,” this setting is enabled.

Ranges differs, depending on Latitude/Longitude setting.

• Latitude/Longitude = dddºmm.mm'
  Ranges: 00.08' to 59.99' (0.01' steps)
• Latitude/Longitude = dddºmm:ss" 
  Ranges: 00'05" to 59'59" (0'01" steps)

Example:
When a target enters in the active alarm range, the GPS Alarm sounds and the GPS alarm icon blinks.
8. GPS OPERATION (ADVANCED)

GPS SET

MENU » GPS > GPS Alarm

Alarm Area (RX/Memory) (Default: Both)
Select the GPS active alarm range.
When a target enters in the active alarm range, the GPS Alarm sounds and the GPS alarm icon blinks.

1) When Alarm Select is set to “RX” or “Memory,” this setting is enabled. (p. 8-40)

• Limited: The transceiver sounds 3 beeps and the GPS Alarm icon blinks when the target enters the 500 meter range.
• Extended: The transceiver sounds 3 beeps and the GPS Alarm icon blinks when the target enters the 1 kilometer range.
• Both: The transceiver sounds a beep and the GPS Alarm icon blinks when the target enters the 1 kilometer range, and sounds 3 beeps and the icon blinks when it enters the 500 meter range. When the target exits the 500 meter range, but is still in the 1 kilometer range, the icon continues to blink, but no beeps sound.

Example:
When a target station enters in the active alarm range (500 meter or 1 kilometer range, depending on the setting), the GPS Alarm sounds and the GPS Alarm icon blinks.

MENU » GPS

GPS Auto TX (Default: OFF)
Select an option for the GPS automatic transmission function.
This function automatically transmits the current position data received from a GPS receiver, as well as any entered GPS message, at the set interval.

NOTE: When GPS TX Mode is “NMEA,” set GPS Select to “External GPS.” If you set to “Manual” or “OFF,” the current position data is automatically transmitted.

• OFF: Does not automatically transmit the position data. (When you push [TRANSMIT] or microphone’s [PTT], the transceiver transmits the position data.)
• 5 sec to 30 min: Transmits the current position data at the selected interval (5*, 10, or 30 seconds, or 1, 3, 5, 10, or 30 minutes).
  * Not displayed when you set 4 GPS sentences in GPS Sentence. (p. 8-19)
9. D-STAR OPERATION (BASIC)

Unique features of D-STAR

- Easy Cross band operation through the repeater
- The Call Sign Capture key \textit{TONERC} makes call sign capture easy!
- Easy call sign entry with the Repeater list or TX/RX History

What is D-STAR?

- D-STAR is a digital protocol standard developed by the Japan Amateur Radio League (JARL). The system includes the DV mode for Digital Voice and the DD mode for Digital Data communications.
- D-STAR supports a comprehensive repeater system linked through the Internet, enabling you to make QSOs with stations near or far from your location.
- D-STAR supports the DV mode at 4.8 kbps. Your call sign data, and either a short message, or GPS data can be transmitted simultaneously with your voice signal.

Advanced Amateur radio technology of D-STAR
The DV mode has a bandwidth of only 6 kHz, compared to 16 kHz for the analog FM mode, with 5 kHz deviation.
D-STAR utilizes the well-known GMSK modulation method that makes very efficient use of occupied bandwidth.

D-STAR occupies 10 kHz. The sound quality is good even though the bandwidth is narrow.
The regular FM mode occupies 20 kHz that is a double the bandwidth of D-STAR.
Before starting D-STAR, the following steps are needed.

**STEP 1** Enter your call sign (MY) into the transceiver. (p. 9-3)

**STEP 2** Register your call sign (MY) to a gateway repeater. (p. 9-4)

**STEP 3** Enter your D-STAR equipment into your registration form. (p. 9-4)

► You have completed the steps!!

**About the DR function**

You can easily use D-STAR repeaters with the D-STAR Repeater (DR) function. With this function, you can select the preset repeater or frequency in “FROM” (access repeater), and Your call sign in “TO” (destination) on the DR screen, as shown below.

To display the DR screen, hold down CALLDR for 1 second.

**NOTE:** If the repeater set in “FROM” (Access Repeater) has no Gateway, you cannot make a Gateway call.

**Ways to Communicate with the DR function**

With the DR function, the transceiver has 3 ways to communicate.

**Local Area call:** To call through your local area (access) repeater.

**Gateway call:** To call through your local area (access) repeater, repeater gateway, and the Internet to your destination repeater or individual station's last used repeater, using Call Sign Routing.

**Simplex call**: To call another station not using a repeater.

* You can make a simplex call. (p. 9-5)

**DV and DD modes**

**DV (Digital Voice) mode**
- Clear voice communication
- Simultaneous communication of the voice and simple data

**DD (Digital Data) mode**
- 128 kbps data communication
- Internet connection

See section 12 for details of the DD mode.

**NOTE:**
- Using the repeater list is required to use the DR function. (p. 9-11)
- Before operating in the Duplex mode, BE SURE to check whether the repeater is busy, or not. If the repeater is busy, wait until it is clear, or ask for a 'break' using a method acceptable to your local procedures.
- The transceiver has the Time-Out Timer function for the DV Repeater operation. The timer limits a continuous transmission. Warning beeps will sound approximately 30 seconds before time-out and then again immediately before the time-out.
9. D-STAR OPERATION (BASIC)

Enter your call sign (MY) into the transceiver

To operate D-STAR, you must first enter your call sign into the MY call sign memory. You can enter up to 6 MY call signs.

**NOTE:** Your MY call sign must match the call sign registered on a gateway repeater. (p. 9-4)

Example: Enter “JA3YUA” as your own call sign into “1.”

1. Open the MY CALL SIGN screen.

   MENU » SET > My Station > My Call Sign (DV)

2. Touch the number for 1 second.

![MY CALL SIGN screen](image)

3. Touch “Edit.”

![Quick Menu](image)

4. Enter your own call sign, then touch [ENT].

![MY CALL SIGN (MY)](image)

5. Touch the entered call sign.

![MY CALL SIGN (DV)](image)

   • Sets the call sign to be used as MY call sign.

6. To close the MY STATION screen, push [EXIT] several times.

**TIP:** You can enter a note of up to 4 characters, such as the model of the transceiver, name, area name, after your call sign.
Register your call sign at a gateway repeater

To make a Gateway call through the Internet, you must register your call sign at a repeater that has a gateway, usually one near you.

**Step 1: Access the call sign registration screen**

1. Access the following URL to find the gateway repeater closest to you.
   http://www.dstarusers.org/repeaters.php
2. Click the call sign of the repeater that you want to register to.
3. Click the “Gateway Registration URL:” link address.
4. The “D-STAR Gateway System” screen is displayed.
   Click <Register> to start the New User registration.

**Step 2: Register your call sign**

1. Follow the registration instructions found there.
2. When you receive a notification from the administrator, your call sign registration has been approved.

**NOTE:** It may take a few days for the administrator to approve you.

**Step 3: Register your personal information**

After your registration is approved, log in your personal account with your registered call sign and password.

**Step 4: Register your D-Star equipment**

1. Register your D-STAR equipment information. Ask the gateway repeater administrator for details.
2. When your registration is complete, log out of your personal account, and start using the D-STAR network.

**NOTE:** You must register your D-Star equipment **BEFORE** you make Gateway Repeater calls.
Making a Simplex call

This section describes the simplex operation (through no repeater).

**NOTE:** Depending on the transceiver’s version, the frequencies may be different. Check for usable frequencies for your operating area.

**What is a Simplex Call?**
A simplex call is a direct call to another station on a single frequency, not using a repeater.

Example: Making a simplex call on 445.670 MHz.

**Step 1: Set “FROM” (Simplex channel)**
1. Select the operating band.
2. Hold down [CALL] for 1 second to display the DR screen.
3. Touch “FROM” to select, and then touch “FROM” again.
4. Touch “Repeater List.”
5. Touch “Simplex.”
6. Touch the desired frequency.
(Example: 445.670 MHz)

- Return to the DR screen, and the selected frequency is displayed in “FROM.”
- “CQCQCQ” is displayed in “TO.”

**TIP:** You can change the simplex frequencies on the MENU screen.

**Step 2: Hold down [PTT] to transmit**
Push [TRANSMIT], or hold down the microphone’s [PTT] to transmit.

Return to the DR screen, and the selected frequency is displayed in “FROM.”

If a station call sign is set in “TO,” select “Local CQ” in the “TO SELECT” screen to set “CQCQCQ” in “TO.”
9. D-STAR OPERATION (BASIC)

Accessing repeaters

This section describes how to check whether or not you can access your local area repeater (Access repeater), and if your signal is successfully sent to a destination repeater.

**TIP:** If your call sign (MY) has not been set, or your call sign and equipment have not been registered at a D-STAR repeater, see pages 9-3, 9-4.

**Step 1: Set “FROM” (Access repeater)**

1. Select the operating band.
2. Hold down **CALL** for 1 second to display the DR screen.
3. Touch “FROM” to select, and then touch “FROM” again.

4. Touch “Repeater List.”
5. Touch the repeater group where your access repeater is listed.
6. Touch your access repeater.
   (Example: Kirkland (IA))

• Returns to the DR screen, and the selected repeater name is displayed in “FROM.”

   ① By just selecting the repeater name, the repeater call sign, its frequency, duplex setting, and frequency offset are automatically set.

   ② A repeater list here is just an example.

**Step 2: Set “TO” (Destination)**

1. Touch “TO” twice.
2. Touch “Gateway CQ.”
3. Select the repeater group where your destination repeater is listed.
4. Select your destination repeater.
   (Example: Melbourne)

• Returns to the DR screen, and the selected repeater name is displayed in “TO.”

**Step 3: Check whether you can access the repeater**

Push **TRANSMIT**, or hold down the microphone’s [PTT] to transmit.

• If you get a reply call, or “UR?” is displayed within 3 seconds, your signal reached your access repeater and your call was successfully sent from your destination repeater.

**TIP:** See page 10-15 for status indications after a reply is received.

TIP: There are several ways to set your access repeater. (p. 10-1)

- Rotating **MAIN DIAL** on the DR screen with “FROM” is selected
- Searching for the nearest repeater
- Setting from the TX History
- Searching for a repeater using the DR scan
9. D-STAR OPERATION (BASIC)

Receiving

When a DV call is received, the call signs of the caller, the called station, and the called station’s access repeater are saved in the RX History. Up to 50 calls can be saved. Even if you turn OFF the transceiver, the RX History is retained. This section describes how to display the RX History screen and how to save the call sign to your memory.

When receiving a call from “JM1ZLK”:

The S-meter and the caller’s call sign are displayed.

**Step 1: To display a received call sign**

Open the RX HISTORY screen.

* Rotate (MAIN DIAL) to confirm other RX history records.

**Step 2: Save the destination call sign into your call sign memory from RX History**

1. Rotate (MAIN DIAL) to select the RX history record with the call sign that you want to save to memory.
2. Touch [DETAIL].
3. Push [QUICK].
4. Touch “Add To Your Memory.”
5. Touch the call sign that you want to save. (Example: “JM1ZLK”)
6. Touch “NAME.”
7. Enter a name of up to 16 characters, then touch [ENT].
8. Touch “<<Add Write>>.”
9. Touch “YES.”
   * Returns to the RX HISTORY DETAIL screen.
10. To close the RX HISTORY screen, push [EXIT] several times.
9. D-STAR OPERATION (BASIC)

### Capturing a call sign

After you receive a signal, the calling station’s call sign can be captured by holding down the Call Sign Capture key (TONERX→CS) for 1 second. After releasing, you can quickly and easily reply to the call.

#### What is the Call Sign Capture key?

Holding down the Call Sign Capture key for 1 second sets the last received station’s call sign as a temporary destination, and makes replying quick and easy.

#### Step 1: Set the received call sign to “TO” (Destination)

While receiving, hold down TONE→CS for 1 second.
- Announces the station call sign.

#### Information

- If you want to select another call sign in the RX History, push TONE→CS, and then rotate MAIN DIAL.
- When a received signal is weak, or during a DV scan, the call sign may not be correctly received. In that case, you cannot capture the call sign.
- When “RX>CS SPEECH” is set to “OFF,” the transceiver does not announce the call sign.

#### Step 2: Hold down [PTT] to transmit

Push TRANSMIT, or hold down the microphone’s [PTT] to transmit.

#### TIP:

The Local CQ call is used to call anyone, but you can call a specific station by simply saying their call sign.

### Making a Local CQ call

You can make a Local CQ call when “Local CQ” is set to “TO” (Destination).

#### What is a Local CQ Call?

To call a CQ through only your local area (access) repeater.

#### Step 1: Set “FROM” (Access repeater)

1. Select the operating band.
2. Hold down CALL DR for 1 second.
3. Touch “FROM” to select, and then touch “FROM” again.

#### Step 2: Set “TO” (Destination)

1. Touch “TO” twice.

#### Step 3: Hold down [PTT] to transmit

Push TRANSMIT, or hold down the microphone’s [PTT] to transmit.

#### TIP:

The Local CQ call is used to call anyone, but you can call a specific station by simply saying their call sign.
9. D-STAR OPERATION (BASIC)

Making a Gateway CQ call

You can make a Gateway CQ call when a destination repeater is selected in “TO” (Destination).

What is a Gateway CQ call?
• To call a CQ through a repeater connected to the Internet.
• You can call a CQ to the areas where you cannot directly access because the communication is routed through the Internet.

Step 1: Set “FROM” (Access repeater)
1. Select the operating band.
2. Hold down [CALL] for 1 second.
3. Touch “FROM” to select, and then touch “FROM” again.
4. Touch “Repeater List.”
5. Select the repeater group where your access repeater is listed.
6. Touch your access repeater. (Example: Melbourne)
   • Returns to the DR screen, and the selected repeater name is displayed in “FROM.”

Step 2: Set “TO” (Destination)
1. Touch “TO” twice.
2. Touch “Gateway CQ.”
3. Select the repeater group where your destination repeater is listed.
4. Select your destination repeater. (Example: Inage)
   • Returns to the DR screen, and the selected repeater name is displayed in “TO.”

Step 3: Hold down [PTT] to transmit
Push [TRANSMIT], or hold down the microphone’s [PTT] to transmit.

Calling an individual station

You can make a call to an individual station when the station call sign is selected in “TO” (Destination). When you call an individual station through a gateway, your call is automatically sent to the last repeater that the station accessed. So, even if you don’t know where the station is, you can make a call using Call Sign Routing.

Step 1: Set “FROM” (Access repeater)
1. Select the operating band.
2. Hold down [CALL] for 1 second.
3. Touch “FROM” to select, and then touch “FROM” again.
4. Touch “Repeater List.”
5. Select the repeater group where your access repeater is listed.
6. Touch your access repeater. (Example: Melbourne)
   • Returns to the DR screen, and the selected repeater name is displayed in “FROM.”

Step 2: Set “TO” (Destination)
1. Touch “TO” twice.
2. Touch “Your Call Sign.”
3. Select your destination repeater. (Example: Rick)
   • Returns to the DR screen, and the selected name is displayed in “TO.”

Step 3: Hold down [PTT] to transmit
Push [TRANSMIT], or hold down the microphone’s [PTT] to transmit.

NOTE: If the selected Access repeater does not connect to the gateway, “XGW” is displayed. In that case, you cannot select “Gateway CQ.”
9. D-STAR OPERATION (BASIC)

Saving settings

When “FROM” (Access repeater) and “TO” (Destination) settings are saved, the settings can be selected by rotating <MULTI>.

Step 1: Saving settings into memory
1. On the DR screen, select the settings to be saved into memory.

   ![DR Screen](image)

2. Push <QUICK>.
3. Touch “Memory Write.”

   ![Quick Menu](image)

4. Touch the settings to be saved into memory. (Example: 1)

   ![Select Settings](image)

5. Touch “YES.”

   ![Write Memory](image)

   • The operating data is saved into a blank channel. “FROM” and “TO” names are automatically entered as the Memory name. (Up to 16 alphanumeric characters.)

Step 2: View the saved contents
1. Hold down <CALL> for 1 second to cancel the DR screen.
2. Push <V/M> to enter the Memory mode.
3. Push <kHz>.
4. Rotate <MULTI> to select the saved channel. (Example: “1”)

   ![Memory Mode](image)

   Memory name

TIP: Checking the Memory contents
You can check the Memory contents on the MEMORY LIST screen.

   ![Memory List](image)
Updating the repeater list

For easy operation, a repeater list is preloaded into your transceiver. This section describes how to update the repeater list using an SD card. You can download the repeater list from the Icom website.

**NOTE:** Before using an SD card, see Section 6 of the basic manual for details of a card.

<table>
<thead>
<tr>
<th>TIP:</th>
<th>The file name “9700_USA_yymmdd” is used as an example in the following instructions.</th>
</tr>
</thead>
<tbody>
<tr>
<td>File Name:</td>
<td>9700_USA_yymmdd.zip</td>
</tr>
</tbody>
</table>

**Step 1: Downloading the repeater list**

1. Access the following URL to download the data files.
   http://www.icom.co.jp/world/support/download/firm/index.html
   - The repeater list and GPS data (CSV: Comma Separated Values file), and settings file (ICF file) are contained in the downloaded ZIP file.

2. Decompress the file that is downloaded from the Icom website.
   - “9700_USA_yymmdd” folder is created on the same place where the downloaded file is saved.

<table>
<thead>
<tr>
<th>TIP:</th>
<th>IC-9700's repeater list is uploaded to “Firmware updates/Software Downloads” in the Icom website.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>The displayed contents may differ.</td>
</tr>
</tbody>
</table>

**Step 2: Inserting the SD card into a PC**

Turn OFF the transceiver, then remove the SD card from the transceiver. Insert it into the SD card drive or a memory card reader* on your PC.

*User supplied.

To use the SD card with the transceiver, format the card using the transceiver, even preformatted for PCs or other uses. See Section 6 of the basic manual for details.
9. D-STAR OPERATION (BASIC)

Updating the repeater list

Step 3: Copying the CSV file to the SD card
1. Double-click the “9700_USA_yymmdd” folder created in the same place where the downloaded file is saved.
2. Copy the CSV file (Example: “9700_USA_Rpt_yymmdd.csv”) in the folder and paste it in the “RptList” folder (“IC-9700” > “Csv” > “RptList”) of the SD card.

Step 4: Removing the SD card
Turn OFF the transceiver, then remove the SD card from your PC, and insert it into the transceiver’s slot.

TIP: We recommends that you save the current data before loading other data into the transceiver.

Step 5: Updating the repeater list
1. Open the IMPORT/EXPORT screen.

2. Touch “Import.”

3. Touch “Repeater List.”

4. Touch the CSV file to be loaded.
(Example: 9700_USA_Rpt_yymmdd)

5. Touch [YES] or [NO].

• YES: Retains the skip settings of the repeater list.
(See page 10-25)
• NO: Does not retain the skip settings of the repeater list.

6. Touch “YES.”

• Starts the import.
• After importing ends, “COMPLETED!” is displayed.

7. To complete the importing, reboot the transceiver.

TIP: If you copy the ICF file to the “Setting” folder of the SD card, the repeater list can be updated with the same procedures. In that case, select “Load Setting” on the SD CARD screen. And on the LOAD FILE screen, select “Repeater List Only.”
9. D-STAR OPERATION (BASIC)

“FROM” (Access repeater) setting

Set by rotating **MAIN DIAL**: Select a preset repeater by rotating **MAIN DIAL** on the DR screen. You can also select the repeater by rotating **MULTI** after pushing **kHz**.

When you know your access repeater:

**From the repeater list:** When your access repeater is in your transceiver’s repeater list, you can select it by selecting the repeater area and name, if entered, or call sign.

When you do not know which repeater you can access:

**Search for a repeater using the DR scan:** The Normal DR scan searches for output repeater frequencies or simplex signals. You can also find FM repeaters.

**Search for the nearest repeater:** Searches for the nearest repeater by using your location and the repeater’s location if it is entered in the Repeater List. The nearest repeaters in your transceiver’s Repeater List are displayed as selectable choices. You can select a nearby repeater type (DV, FM, or DD).

When the “FROM” data is saved in the TX History:

**Set from the TX History:** Select a repeater that you have accessed before, from the TX History record.
9. D-STAR OPERATION (BASIC)

“FROM” (Access repeater) setting

**Set by rotating** (MAIN DIAL):
Rotate (MAIN DIAL) to select a repeater or Your Call Sign that is displayed on the DR screen. This operation is disabled when “CQCQCQ” is set.

**TIP:** After you receive the individual station or repeater’s signal, the call sign can be captured by holding down the Call Sign Capture key (TONERX), and you can quickly and easily reply to a call.

**To make a Local Area CQ call:**
Set “CQCQCQ” in “TO” (Destination).

**To make a Gateway CQ call:**
Select a repeater from the repeater list, if you want to make a Gateway call.

**To make a call to a specific station:**
Select the station call sign in the Your Call Sign.

**To make a call through a reflector:**
Select a reflector that is connected to the repeater you want to call through.

**To select from RX History:**
When you receive a call, the caller station data is saved in RX History. You can select the destination from the record.

**To select from TX History:**
When you make a call, the destination repeater or called station data is saved in TX History. You can select the destination from the record.

**To directly enter the destination station call sign:**
Directly enter the destination station’s call sign.

**To directly enter the destination repeater call sign:**
Directly enter the destination repeater’s call sign.
10. D-STAR OPERATION (ADVANCED)

“FROM” (Access repeater) setting

Your Access repeater must be set in “FROM” when you make a call on the DR screen. You have 5 ways to set the Access repeater.

By rotating [DIAL]
Select the preset repeater by rotating **MAIN DIAL** on the DR screen.

- **When you know your access repeater**

  **From the repeater list (p. 10-2)**
  You can select your access repeater from the repeater list by selecting the repeater area and name, if entered, or call sign.

- **When you do not know which repeater you can access**

  **Search for a repeater using the DR scan (p. 10-3)**
  The Normal DR scan searches for output repeater frequencies of nearby repeaters. The scan stops when a signal is detected.
  - The scan also stops on Simplex signals.

  The Near Repeater scan searches for output repeater frequencies of nearby repeaters that are within 160 kilometer (100 miles) from your position and the repeater’s position that is entered in the repeater list. The DR scan starts scanning and stops when a signal is detected.
  You can also find only FM repeaters using the Near Repeater (FM) scan.

  **Search for near repeaters (p. 10-4)**
  Searches for near repeaters that are within 160 kilometer (100 miles) from your position using your GPS position and the repeater’s position that is entered in the repeater list.
  The nearest repeaters in your transceiver’s repeater list are displayed as selectable options.
  You can select the nearby DV only, FM only, or both repeater types.

- **When “FROM” data is saved in the TX History.**

  **From the TX History (p. 10-5)**
  Select a repeater that you have accessed before from the TX History.
Using your transceiver’s repeater list
When your access repeater is in your transceiver’s repeater list, you can select it from the list. By just selecting the repeater from the list, the repeater call sign, its frequency, duplex setting, and frequency offset are automatically set, for easy operation.

Example: Selecting the “Kirkland (IA)” repeater in Washington, USA from the repeater list.

1. Select the operating band. (Example: 430 MHz)
2. Hold down CALL for 1 second to display the DR screen.
3. Touch [FROM] to select “FROM.”
4. Touch [FROM].
5. Touch “Repeater List.”
6. Select the repeater group where your access repeater is listed.
7. Select your access repeater.

- Returns to the DR screen, and the selected repeater name, frequency, and call sign are displayed in “FROM.”

TIP: When you select an FM repeater:
When an FM repeater is in your transceiver’s repeater list, you can select it from the list. When selecting an FM repeater, the “TO” setting is not necessary and a “---” is displayed in “TO.”

How to change the repeater group:
To change the repeater group on the DR screen, push (QUICK), then select “Group Select.”

The repeater list, described in this manual, may differ from your transceiver’s preloaded contents.
10. D-STAR OPERATION (ADVANCED)

“FROM” (Access repeater) setting

◇ Using the DR scan
The DR scan searches frequencies to find a signal on a repeater, or on a simplex frequency.
You can use 2 kinds of DR scans, Normal scan and Near Repeater scan.

Normal scan
To quickly find a repeater, the Normal scan skips repeaters that are not set as an access repeater.
① The “USE (FROM)” setting is set to “NO” on the repeater list.
(MENU > DV Memory > Repeater List)

Near Repeater scan
The Near Repeater scan searches for up to 20 nearby repeaters by using your position and the repeater’s entered position, and then lists the repeaters.
① The Near Repeater scan continues, even if you turn OFF the transceiver, and then turn it ON again during the scan.
① If your own position data is not being received from GPS satellites, the last received position is used.

Example: Selecting an active repeater using the DR scan.
1. Select the operating band. (Example: 430 MHz)
2. Hold down CALL DR for 1 second to display the DR screen.
3. Touch [FROM] to select “FROM.”

4. Push SCAN.
   ① Displays the DR scan setting window.
5. Rotate [DIAL] to select the scan type.
   ① Normal:
      Searches for repeaters whose “USE (FROM)” setting is set to “YES.”
   ① Near Repeater (DV/FM):
      Searches for up to 20 nearby DV or FM repeaters. (Total 40 repeaters)
   ① Near Repeater (DV):
      Searches for up to 20 nearby DV repeaters.
   ① Near Repeater (FM):
      Searches for up to 20 nearby FM repeaters.
   ① The selected scan starts.
   ① In the DR scan, the repeaters are sequentially displayed by distance, in descending order.
   ① The scan resumes the same as other scans.

6. When the transceiver receives a signal from a repeater, the scan stops. Push SCAN.
   ① The repeaters are sequentially displayed.
   ① The DR scan is canceled, and the repeater is set to “FROM.”

TIP: The DR scan scans the simplex frequencies in the repeater list, in addition to D-STAR repeaters.

NOTE: Even if your transceiver receives a repeater signal, the repeater may not receive your signal, because the repeater’s output power is higher than your transceiver’s, and your signal does not reach the repeater.
“FROM” (Access repeater) setting

**Using the Near Repeater Search function**
The transceiver searches for the nearest repeaters by using your position and the repeater’s entered position.
The nearest repeaters in your transceivers’ repeater list are displayed as selectable options.

**NOTE:**
- When using the Near Repeater Search function, BE SURE to first receive your own GPS position data, or manually enter your position data.
- If no repeater is found within a 160 kilometer (100 miles) range, “No Repeater Found” is displayed.
- If the last received position can be used, “GPS is invalid. Search by last valid position” is displayed.

**Example:** Selecting a nearby repeater from the Near Repeater list.

**Step 1: Receiving your own position from the GPS satellite**
Confirm the GPS receiver is receiving your position.
- The GPS icon blinks when searching for satellites.
- The GPS icon stops blinking when the minimum needed number of satellites is found.

- It may take only a few seconds to receive, or it may take a few minutes, depending on your operating environment. If you have difficulties receiving, we recommend that you try a different position.
- If your own position is not being received, the last received position is used for your location.
- If the “GPS Select” item is set to “Manual” GPS icon is not displayed.

**Step 2: Selecting the Access repeater from the Near Repeater list**
1. Select the operating band. (Example: 430 MHz)
2. Hold down CALL OFF for 1 second to display the DR screen.
3. Touch [FROM] to open the FROM SELECT screen.
4. Touch [Near Repeater].
5. Select the type of nearby repeater to display.
   - Near Repeater (ALL): Displays up to 20 nearby DV and FM repeaters. (A total 40 repeaters)
   - Near Repeater (DV): Displays up to 20 nearby DV repeaters.
   - Near Repeater (FM): Displays up to 20 nearby FM repeaters.
   - Near Repeater (DD): Displays up to 20 nearby DD repeaters.
6. Select the repeater to use as your access repeater, considering the distance from your position to the repeater.

- Returns to the DR screen, and the selected repeater is set in “FROM.”

* When the “POSITION” setting (p. 8-41) is set to “Approximate” on the repeater list, the direction data is not displayed if the distance to the repeater is less than 5 kilometers.
(MENU > DV Memory > Repeater List)
* Returns to the DR screen, and the selected repeater is set in “FROM.”
10. D-STAR OPERATION (ADVANCED)

“FROM” (Access repeater) setting

♦ Using TX History
The TX History saves up to 10 of the latest Access (From) repeaters you transmitted on. You can select a repeater from TX History as your Access repeater.

Example: Selecting the “Hirano” repeater from TX History.

1. Select the operating band. (Example: 430 MHz)
2. Hold down CALL DR for 1 second to display the DR screen.
3. Touch [FROM] to open the FROM SELECT screen.
4. Touch “TX History.”
5. Touch the TX History type.
   - TX History (DV): Displays the TX History of the DV repeaters.
   - TX History (FM): Displays the TX History of the FM repeaters.
   - TX History (DD): Displays the TX History of the DD repeaters.
6. Select the repeater to use it as your Access repeater.
   - Returns to the DR screen, and the selected repeater is set in “FROM.”

TIP: When you push QUICK in step 6, you can display the REPEATER DETAIL screen, or delete the repeater information from the TX HISTORY screen.
“TO” (Destination) setting

“CQCQCQ,” a destination repeater, or a station call sign must be set in “TO” when you make a call in the DV mode. You have 8 ways to set “TO” (destination).

**By rotating [DIAL]**
Rotate [DIAL] to select the repeater or Your Call Sign that is displayed on the DR screen. (This operation is disabled when “CQCQCQ” is set.)

- **To make a Local Area CQ call**
  “Local CQ” setting (p. 9-8)
  Set “CQCQCQ” in “TO” (Destination).

- **To make a Gateway CQ call**
  “Gateway CQ” setting (p. 9-9)
  Select a repeater from the repeater List, if you want to make a Gateway call.

- **To make a call to a specific station**
  “Your Call Sign” setting (p. 9-9)
  Select the station call sign in the Your Call Sign memory.

- **To make a call through a Reflector**
  “Reflector” setting (p. 10-12)
  Select a reflector you want to call through.

- **To select from RX History**
  Setting from RX History (p. 10-8)
  When you receive a call, repeater or caller station data is saved in RX History.
  Select the destination from the record.

- **To select from TX History**
  Setting from TX History (p. 10-8)
  When you make a call, the destination repeater or called station data is saved in TX History.
  Select the destination from the record.

- **To directly enter the destination station call sign**
  Direct Input (UR) (p. 10-9)
  Directly enter the destination station’s call sign.

- **To directly enter the destination repeater call sign**
  Direct Input (RPT) (p. 10-9)
  Directly enter the destination repeater’s call sign.

**TIP:** After you receive the individual station or repeater’s signal, the call sign can be captured by holding down the Call Sign Capture key ([TONE RX → CS]), and you can quickly and easily reply to a call.
“TO” (Destination) setting

◊ Using the “Local CQ” (Local Area call)
When “Local CQ” is selected on the TO SELECT screen, “CQCQCQ” is set in “TO.”

Example: Making a Local area call by accessing the “Hirano” repeater.

1. Touch “TO” to select, then open the TO SELECT screen.

2. Touch “Local CQ.”
   • Returns to the DR screen, and “CQCQCQ” is set in “TO.”

◊ Using the “Gateway CQ” (Gateway call)
When “Gateway CQ” is selected on the TO SELECT screen, you can select the repeater to make a gateway call on the repeater list.

Example: Making a Gateway CQ call to the “Issaquah” repeater from the “Kirkland (IA)” repeater.

1. Touch “TO” to select, then open the TO SELECT screen.

2. Touch “Gateway CQ.”
3. Touch the repeater group where your destination repeater is listed.
4. Touch the destination repeater.
   ① Each repeater has a correct node (A, B, or C band) that you want to transmit on. See page 10-27, “NOTE” for band letter details.

   (Example: “23: USA West”)
   • Returns to the DR screen, and “Issaquah” is set in “TO.”

◊ Using “Your Call Sign”
The “Your Call Sign” memory saves individual or repeater station call signs. When you select the call sign for the “TO” (Destination) setting, you can make a Gateway call. When you call an individual station through a gateway, the signal is automatically sent to the last repeater that the individual station accessed. Therefore, even if you do not know where the individual station is located, you can make a call.

NOTE: If the repeater, set in “FROM” (Access repeater) has no Gateway call sign, you cannot make a gateway call.

Example: Selecting “Rick” from “Your Call Sign.”

1. Touch “TO” to select, then open the TO SELECT screen.

2. Touch “Your Call Sign.”
3. Touch a destination name or call sign.
   • Returns to the DR screen, and “Rick” is set in “TO.”

TIP: After selecting a destination repeater, you can select another repeater preset in your repeater List by rotating MAIN DIAL.
Using RX History
When a call is received in the DV mode, the call data is saved in the RX History. Up to 50 callers, and only the last called call signs, for a total of 51 histories can be saved.

Example: Selecting “Rick” in the RX History.
1. Touch “TO” to select, then open the TO SELECT screen.
2. Touch “RX History.”
3. Touch a destination name or call sign.

• Returns to the DR screen, and “JA3ZNB F” is displayed in “TO.”

Using TX History
TX History saves the repeater and station name and call sign of up to 20 “TO” (Destination) settings that were used when you made the calls.

NOTE: Until you make a call in the DV mode, you cannot select “TO” (destination) from the TX History.

Example: Selecting the “Kirkland (IA)” repeater in the TX History.
1. Touch “TO” to select, then open the TO SELECT screen.
2. Touch “TX History.”
3. Touch a destination repeater.

• Returns to the DR screen, and “Kirkland (IA)” is displayed in “TO.”

TIP: To add RX HISTORY data to a “Your Call Sign” memory, push QUICK, then select “Add To Your Memory.”

TIP: You can add the TX HISTORY data to memory, or delete it from the TX HISTORY screen. Push QUICK, then select the option.
10. D-STAR OPERATION (ADVANCED)

“TO” (Destination) setting

◊ Directly entering (UR)
The destination station call sign can be directly entered.

Example: Directly entering the call sign “JM1ZLK.”

1. Touch “TO” to select, then open the TO SELECT screen.
2. Touch “Direct Input (UR).”
3. Enter the station’s call sign of up to 8 characters, including spaces.
4. After entering, touch [ENT].
   • Returns to the DR screen, and “JM1ZLK” is set in “TO.”
   ①After entry, you can correct the call sign in the DIRECT INPUT (UR) screen.
   ②The entered call sign remains on the DIRECT INPUT (UR) screen, until you enter a new call sign.

◊ Directly entering (RPT)
The destination repeater call sign can be directly entered.

NOTE: BE SURE to include a “/” at the beginning and the node letter as the 8th digit. See page 10-27 “NOTE” about the node letters.

Example: Directly entering the call sign “JP3YDHA.”

1. Touch “TO” to select, then open the TO SELECT screen.
2. Touch “Direct Input (RPT).”
3. Enter a repeater call sign of up to 8 characters, including spaces.
4. After entering, touch [ENT].
   • Returns to the DR screen, and “JP3YDHA” is set in “TO.”
   ①After entry, you can correct the call sign in the DIRECT INPUT (RPT) screen.
   ②The entered call sign remains on the DIRECT INPUT (RPT) screen, until you enter a new call sign.

TIP: If the entered call sign has a duplicate in the “Your Call Sign” memory, the name is displayed. (Only when the name has been entered.)
10. D-STAR OPERATION (ADVANCED)

REPEATER DETAIL screen

Depending on the content, such as position data or UTC offset, the distance between your position and the repeater or the repeater time can be displayed on the REPEATER DETAIL screen. The detail screen can also be entered from the FROM SELECT screen.

Example: Displaying the “Hirano” repeater detail screen

1. Touch “TO” to select, then open the TO SELECT screen.

2. Touch “Gateway CQ.”
3. Touch “11: Japan.”
4. Touch “Hirano” for 1 second.
5. Touch “Detail.”

① If there is no position data, the distance and direction from your position are not displayed. See page 5-3 to confirm your position.
② When selecting the FM repeater, either of “FM” or “FM-N” and the tone setting are displayed.

The REPEATER DETAIL screen

Repeaters name, Sub name, Group number, Repeater frequency
Direction from your position
Distance from your position
Repeater time
Duplex setting

TIP: You can display the REPEATER DETAIL screen when the DR screen is displayed. When you set the repeater as shown below, push [QUICK], then select “Repeater Detail.”

③ Displays the REPEATER DETAIL screen.
10. D-STAR OPERATION (ADVANCED)

CONNECTING TO A REFLECTOR

◊ What is a reflector?
A reflector is a special server connected to the Internet and running a version of the D-Plus software. If the D-Plus software is installed on your Access repeater, it provides various functions including gateway and reflector linking capabilities (It is known as the D-STAR reflector system). The D-STAR reflector system enables a number of D-STAR repeaters anywhere to link to a reflector. This means that when you transmit through a D-STAR repeater linked to a reflector, your voice can be heard on other repeaters linked to the reflector, and you can hear other stations that are connected to the reflector.

◊ Using a reflector
1. Touch “TO” to select, then open the TO SELECT screen.

2. Touch “Reflector.”
   • Displays the REFLECTOR screen.
3. Select “Use Reflector.”
   • Returns to the DR screen, and “Use Reflector” and “CQCQCQ” are set in “TO.”

4. Push TRANSMIT, or hold down the microphone’s [PTT] to transmit.
10. D-STAR OPERATION (ADVANCED)

Connecting to a reflector

◇ Linking to a reflector
If your repeater is not currently linked to a Reflector, or if you want to change it to another Reflector, follow the steps below. Before linking to another Reflector, BE SURE to unlink the current Reflector. (p. 10-13)

Direct inputting a Reflector

Example: Directly enter “REF010BL.”

1. Touch “TO” to select, then open the TO SELECT screen.

2. Touch “Reflector.”

3. Touch “Link to Reflector.”

4. Touch “Direct Input.”

5. Touch the number item, then rotate [MAIN DIAL] to select the reflector number and module letter, then touch [SET].

* Returns to the DR screen, and “Link to Reflector” and “REF010BL” are set in “TO.”

6. Push [TRANSMIT], or hold down the microphone’s [PTT] to link to the Reflector.

Using TX History

TX History saves up to 5 reflectors that your Access repeater linked to before.

Example: Select the “REF010BL” in TX History.

1. Touch “TO” to select, then open the TO SELECT screen.

2. Touch “Reflector.”

3. Touch “Link to Reflector.”

4. Touch the reflector that you want to link to.

* Returns to the DR screen, and “Link to Reflector” and “REF010BL” are set in “TO.”

5. Push [TRANSMIT], or hold down the microphone’s [PTT] to link to the reflector.
10. D-STAR OPERATION (ADVANCED)

Connecting to a reflector

◊ Unlinking a reflector
Before trying to link to another reflector, BE SURE to unlink the current connected reflector.

1. Touch “TO” to select, then open the TO SELECT screen.
2. Touch “Reflector.”
3. Touch “Unlink Reflector.”
   • Returns to the DR screen, and “Unlink Reflector” and “U” are set in “TO.”
4. Push [TRANSMIT], or hold down the microphone’s [PTT] to unlink the reflector.

◊ Reflector Echo Testing
To confirm that your signal is correctly getting into the repeater, you can transmit a short message as a trial. After stopping transmission, your message will be played back.

1. Touch “TO” to select, then open the TO SELECT screen.
2. Touch “Reflector.”
3. Touch “Echo Test.”
   • Returns to the DR screen, and “Echo Test” and “E” are displayed in “TO.”
4. Push [TRANSMIT], or hold down the microphone’s [PTT] and speak into the microphone.
5. Stop transmitting to hear your message.

◊ Requesting repeater information
When you send the repeater information command, an ID message is sent back.

1. Touch “TO” to select, then open the TO SELECT screen.
2. Touch “Reflector.”
3. Touch “Repeater Information.”
   • Returns to the DR screen, and “Repeater Information” and “I” are set in “TO.”
4. Push [TRANSMIT], or hold down the microphone’s [PTT] to transmit the repeater Information command.
5. Stop transmitting to hear the repeater ID message.

NOTE: If a reflector is already connected, ask on the air whether or not you can change reflectors and wait for responses. BE SURE to reconnect back to the same reflector when you finish your conversation.
10. D-STAR OPERATION (ADVANCED)

Message operation

You can save up to 5 short messages in the transceiver’s memory to transmit in the DV mode. Each message can be up to 20 characters.

◊ Entering a TX message

Example: Entering “JAPAN TOM” into TX message memory number 1.

1. Open the TX MESSAGE (DV) screen.

2. Touch a TX message memory number for 1 second.

3. Touch “Edit.”

4. Enter a message of up to 20 characters, then touch [ENT].

◊ Transmitting a message

You can transmit a preset TX message by pushing [PTT] in the DV mode. First, select a TX message which also turns ON the Message Transmission function.

1. Open the TX MESSAGE (DV) screen.

2. Touch a TX message memory number.

3. To close the TX MESSAGE (DV) screen, push EXIT.

◊ Deleting a TX message

You can delete the TX messages.

1. Push MENU.

2. Touch a TX message memory number for 1 second.

3. Select “Clear.”

4. Touch <YES>.

Information

• The message is transmitted with your voice signal.
• The message is transmitted each time you transmit.
• When continuously transmitting, the selected TX message is transmitted every 30 seconds.

Selectable characters and symbols

A to Z, a to z, 0 to 9, ! “ # $ % & ’ ( ) * + , - . / : ; < = > ? @ [ ] ^ _ ` { | } ~ (space)

• Returns to the TX MESSAGE screen.

• The confirmation dialog is displayed.

To exit the MENU screen, push MENU.
Viewing received call signs

When you receive a DV call, the calling station and the repeater call signs are saved. Up to 50 calls can be saved. When you receive the 51st call, the oldest history is deleted.

1. Open the RX HISTORY screen.
2. Touch an RX history memory to view the details.
   - The RX history number, the caller's name (or call sign), destination, RX message, RX date and time, “GW,” and “GPS” are displayed.
   - “GW” is displayed when a Gateway call is received.
   - “GPS” is displayed when the received call includes position data.
   - “UP” is displayed when a repeater uplink signal is received.
   - In the Quick Menu, you can select the following options:
     - RX>CS: Temporarily sets the call sign into TO.
     - Call Sign Display: The received data is displayed in the Call Sign Display mode.
     - Name Display: The received data is displayed in the Name Display mode.
     - Add to RPT List: Adds the repeater’s call sign to the Repeater List.
     - Add to Your Memory: Adds the caller station’s call sign to Your Call Sign.
     - Delete: Deletes the selected RX history.

3. Touch [DETAIL].
   - Displays the RX history detail screen.
   - Rotate (MAIN DIAL) to select the page.

Viewing the call signs on the RX History screen

1. Open the RX HISTORY screen.
2. Touch an RX history memory to view the details.
   - The RX history number, the caller’s name (or call sign), destination, RX message, RX date and time, “GW,” and “GPS” are displayed.
   - “GW” is displayed when a Gateway call is received.
   - “GPS” is displayed when the received call includes position data.
   - “UP” is displayed when a repeater uplink signal is received.
   - In the Quick Menu, you can select the following options:
     - RX>CS: Temporarily sets the call sign into TO.
     - Call Sign Display: The received data is displayed in the Call Sign Display mode.
     - Name Display: The received data is displayed in the Name Display mode.
     - Add to RPT List: Adds the repeater’s call sign to the Repeater List.
     - Add to Your Memory: Adds the caller station’s call sign to Your Call Sign.
     - Delete: Deletes the selected RX history.

   RX HISTORY screen (RX01)

   - Caller station
   - Received signal mode
   - RX message
   - Displayed when a Gateway call is received.

   D-PRS information
   - Compass direction
   - Distance
   - D-PRS symbol

   *1 The icon differs, depending on the D-PRS TX format.
   - GPS: Position
   - OBJ: Object
   - ITEM: Item
   - WX: Weather

   *2 When a name is not entered in the DV Memory, the call sign is displayed.

When you receive a DV call, the calling station and the repeater call signs are saved. Up to 50 calls can be saved. When you receive the 51st call, the oldest history is deleted.

Even if the transceiver is turned OFF, the RX record is not deleted.

1st page

- CALLER: Displays the caller station’s name and any note entered after the call sign.
- CALLED: Displays the called station’s name.
- "CQC QCQ" is displayed when receiving a Local Area call or Gateway call.

2nd page

- RXRPT1: Displays the repeater’s name that was accessed by the caller station. If the received call was a Gateway call, this item displays the gateway call sign of the repeater you received the call from.
- RX RPT2: Displays the repeater’s name you received the call from.
- The operating frequency is displayed instead of above items when the call was not through a repeater (Simplex call).
Viewing received call signs

- View the call signs on the RX History screen

  **<3rd page>**
  - **RX MESSAGE:** Displays any message included in the received call, if entered.
  - **RX TIME:** Displays the date and time the call was received.

  ![RX History Screen](image)

  **<4th, 5th page>**
  Displays position data of the caller station. If a received signal has no data, then no position data is displayed.

  ![Position Data Screen](image)

4. To close the RX HISTORY screen, push **EXIT**.

---

**TIP:** To delete RX HISTORY data
On the RX HISTORY or the detail screen, push **QUICK**, then touch “Delete” or “Delete All.”

![Quick Menu](image)
10. D-STAR OPERATION (ADVANCED)

BK mode communication

The Break-in (BK) function enables you to break into a conversation, where the 2 stations are communicating with the call sign squelch (DSQL) enabled.

1. While 2 stations are communicating in the DV mode, touch TONE RX → CS for 1 second.
   - After releasing TONE RX → CS, the calling station's call sign or the repeater's call sign is set to "TO" (Destination).
   - Beeps sound and the calling station's call sign is announced.
   - When a call sign is not received correctly, error beeps sound, and no call sign is set.
2. Open the BK screen.
   MENU » SET > DV/DD SET > BK
3. Touch “ON.”
4. Push EXIT several times.
   - Returns to the standby screen, and “BK” is displayed.
5. When both stations are in standby, Push TRANSMIT, or hold down the microphone’s [PTT] to transmit.
   - “BK” blinks when receiving a Break-in call.
   - To cancel the BK mode, select “OFF” in step 3, or turn OFF the transceiver.

How to use Break-in?

While using the Digital Call Sign squelch (DSQL), the squelch never opens (no audio is heard) even if a call is received, unless the call is addressed to your own call sign. However, when a call including the “BK ON” signal (break-in call) is received, the squelch opens and audio is heard even if the call is addressed to another station.

Station C calling to Station A with “BK OFF”

Station A and B are communicating using the Digital Call Sign squelch.

Station B does not hear that Station C is calling Station A.

Station C calling to Station A with “BK ON”

Station A and B are communicating using the Digital Call Sign squelch.

Station B also hears that Station C is calling Station A.
EMR communication

The Enhanced Monitor Request (EMR) communication function can be used in only the DV mode. Using the EMR function, no call sign setting is necessary.

⚠️ Information
- All transceivers that receive an EMR signal automatically open their squelch to receive the signal. DO NOT use this function except in the case of emergency.
- When an EMR signal is received, the audio (voice) is heard at the set level, even if the volume setting level is set to the minimum level.
- The EMR communication function is automatically turned OFF when you turn OFF the transceiver.

Example: Transmitting from the “Hirano” repeater using the EMR function.

1. Open the EMR screen.
   
2. Touch “ON.”

3. Push MENU.

   • Returns to the standby screen, and “EMR” is displayed.

4. Push TRANSMIT, or hold down the microphone’s [PTT] to transmit.
   • “EMR” blinks on a station that receives the EMR signal. The audio (voice) is heard at the set EMR AF Level, or the [AF RF/SQL] control level, whichever is higher.
   • To cancel the EMR mode, select “OFF” in step 2, or turn OFF the transceiver.

diamond Adjusting the EMR AF level

The audio output level, when an EMR signal is received, is adjustable between 0 and 100%. When an EMR signal is received, the audio is heard at the preset level, or the [AF RF/SQL] control level, whichever is higher.

To turn OFF the setting, set to “0.”

1. Open the EMR AF Level screen.

2. Touch [+] or [−] to adjust the EMR audio output level between 0% (OFF) and 100% (maximum).
   (Default: 50%)

3. To close the EMR AF Level screen, push EXIT.
10. D-STAR OPERATION (ADVANCED)

Automatic DV detection

If you receive an FM signal while in the DV mode, the “DV” and “FM” icons alternately blink to indicate the received signal is FM. When the DV Auto Detect function is ON, the transceiver automatically selects the FM mode to temporarily monitor the signal. (Default: OFF)

Regardless of this setting, the “DV” and “FM” icons alternately blink if you receive an FM signal while in the DV mode.

**NOTE:** When Digital Call Sign squelch (DSQL) or Digital Code squelch (CSQL) is selected, the transceiver does not receive FM signals, even if this function is ON. You can silently wait for calls from others.

1. Open the DV Auto Detect screen.
2. Rotate **MAIN DIAL** to select DV Auto Detect, then touch ON.
3. To close the DV Auto Detect screen, push **EXIT**.

When an FM signal is received while in the DV mode

**DV Auto Detect function: OFF**
The “DV” and “FM” icons alternately blink, but the audio cannot be heard.

**DV Auto Detect function: ON**
The “DV” and “FM” icons alternately blink, and the audio can be heard.

Thanks for the nice QSO!

You can hear the audio!

You cannot hear the audio.
10. D-STAR OPERATION (ADVANCED)

**Automatic Reply function**

When a call addressed to your own call sign is received, the Automatic Reply function sounds beeps and automatically replies with your call sign.  
(Default: OFF)
Depending on the setting, a recorded message may be transmitted with the call sign.

1. Open the Auto Reply screen.
   
   ![Auto Reply screen]

2. Touch an option.

   - **ON**: Automatically replies with your own call sign. (No audio reply is sent)
   - **Voice**: Automatically replies with your call sign and an Auto Reply message recorded on the SD card (up to 10 seconds).
     1. If no SD card is inserted, or no message is recorded, replies with your own call sign (No audio reply is sent).

3. To close the Auto Reply screen, push **EXIT**.

   ![Auto Reply icon]

   - Returns to the standby screen, and displays the Auto Reply icon.
   1. When “ON” or “Voice” is selected, the Automatic Reply function is automatically turned OFF, when you transmit.

   **Example**: After receiving a call from “JM1ZLK,” beeps sound and the transceiver automatically sends a reply call.

   ![Example screen]

   The “TO” setting does not change, but “UR: JM1ZLK (Caller’s call sign)” is displayed.

   **NOTE**: The Automatic Reply function temporarily sets the received call sign to “TO” (destination).

   **TIP**: To record the Auto Reply message
   
   You can record the Auto Reply message. See page 10-20 for details.
   
   (MENU > Voice Memo > DV Auto Reply)
10. D-STAR OPERATION (ADVANCED)

Automatic Reply function

Diamond Recording an Auto Reply message
You can record an Auto Reply message and save it on an SD card to reply to the call with your voice.

NOTE: Confirm an SD card is in the card slot.

1. Open the DV Auto Reply screen.
   (MENU) ➔ (2) ➔ DV A-RPLY
2. Touch to start recording.
   • Touch to stop recording.
   • Touch to playback the recorded message.

Information
• The maximum recording time is 10 seconds.
• Hold the microphone 5 ~ 10 cm (2 ~ 4 inches) from your mouth, then speak at your normal voice level.
• Touch [MIC GAIN] to open the MIC GAIN ADJUST screen.
• Only 1 message can be recorded. The current contents is overwritten if you record again.
3. To close the DV Auto Reply screen, push [EXIT].

Diamond When receiving a position data
When you transmitted a call to a station and the station automatically replies with the station’s position data, the received position data is displayed in a window.

1. Distance and direction are displayed only when the “GPS Select” item is set to “Manual.”
   (MENU > GPS > GPS Set > GPS Select)
2. You can turn OFF the caller’s position display.
   (MENU > SET > Display > Reply Position Display)

The DV AUTO REPLY screen
Audio level is displayed
Adjust the Mic gain so that the REC Level does not reach to this range.

TIP: To delete the recorded message, push [QUICK] on the DV AUTO REPLY screen, then touch [Clear].

1. Transmit to the station.
2. The position data is automatically transmitted.
3. Received position data is displayed.

Scrolls received call sign or the TX message.
In addition to digital voice communication, you can send and receive data. Also, you can use the DV Fast Data function for data communication.

To send and receive data, the optional OPC-2350LU or OPC-2218LU, and a data communication software (user supplied) are required.

**NOTE:** DV Data TX is set to “Auto” as the default setting. When you enter text data into your communication software, the transceiver may automatically transmit it, depending on the software and the software settings.

### Data communication application setting
Set the communication software, as shown below.

- **Port:** The COM port number that is used by the IC-9700.*1
- **Baud rate:** 4800/9600 bps*2
- **Data:** 8 bit
- **Parity:** none
- **Stop:** 1 bit
- **Flow control:** Xon/Xoff

*1 Depending on the PC environment, the COM port number used by the IC-9700 may be higher than 5. In that case, use an application that can set it to higher than 5.

*2 Set the baud rate in **Data Speed.**
(MENU > Connectors > USB (B)/DATA Function > DV Data/GPS Out Baud Rate)

### Sending data
1. Set your own call sign, the destination call sign, and the repeater call sign.
2. Follow the instructions of your data communication application software.
3. When you enter text data into your communication software, the transceiver may automatically transmit it, depending on the software and the software settings.

When **DV Data TX** is set to “PTT,” pushing [TRANSMIT] or [PTT] on the microphone transmits the text data and a voice signal.
(MENU > DV/DD Set > DV Data TX)

Before transmitting, the transceiver sends approximately 500 milliseconds of carrier sense.

**NOTE:** Before you start sending data, BE SURE to set the following items.

- Set **GPS Select** to other than “External GPS.”
  (MENU > GPS > GPS Set > GPS Select)
- Set **GPS Out** to “OFF.”
  (MENU > SET > Connectors > USB (B)/DATA Function > GPS Out)

**NOTE:** Only ASCII code can be used for data communication.

- The transceiver has also a Message Transmission function that transmits up to 20 characters. (p. 10-14)
- Depending on the combination of your PC and your communication software, some data may be lost.
- While receiving voice or data through the Internet, some packets may be lost due to network error (poor data throughput performance). In such a case, an “L” is displayed on the screen to indicate that packet loss has occurred.

When using a USB cable (User supplied)
- Set **USB (B) Function** to “DV Data.”
  (MENU > SET > Connectors > USB (B)/DATA Function > USB (B) Function)

When using optional data communication cable
- Set **USB (B) Function** to “DV Data.”
  (MENU > SET > Connectors > USB (B)/DATA Function > DATA Function)

**NOTE:**

When using optional data communication cable
- Set **USB (B) Function** to “DV Data.”
  (MENU > SET > Connectors > USB (B)/DATA Function > DATA Function)
10. D-STAR OPERATION (ADVANCED)

Data communication

◊ DV Fast Data function
To send data using the DV Fast Data function, follow the instructions below.

The DV Fast Data communication can be made by only the following Icom transceivers:
  * Usable only when firmware versions CPU M 1.10, S 1.00, C 1.10, and DSP 1.10 or later are installed.

1. Open the DV FAST DATA screen.
   MENU » SET > DV/DD SET > DV Fast Data
2. Touch “Fast Data.”
3. Touch “ON.”

4. To close the DV Fast Data screen, push EXIT.
The digital squelch opens only when you receive a signal addressed to your own call sign, or a signal that includes a matching digital code. You can silently wait for calls from others. You can independently set the Digital squelch function in the VFO mode, Memory mode, Call channel mode, or DR function.

**Digital squelch functions**

**The Digital Call Sign squelch setting**
1. Push [FUNCTION].
2. Touch [D.SQL] several times to select “DSQL.” Each touch selects “DSQL,” “CSQL” or “OFF.”

- When the received signal includes a matching call sign, the squelch opens and you can hear the audio.
- When the received signal does not include a matching call sign, the digital call sign squelch does not open. However, the S/RF meter displays the received signal level.

**The Digital Code Squelch setting**
1. Push [FUNCTION].
2. Touch [D.SQL] several times to select “CSQL.” Each touch selects “DSQL,” “CSQL” or “OFF.”
5. Push [EXIT] to close the FUNCTION screen.

- Range: 00 ~ 99
- Touch [DEF] for 1 second to return the value to the default.

**NOTE:**
- **DO NOT** use the Digital Call Sign Squelch function when communicating with 2 or more stations, because the function opens only when receiving a signal addressed to your own call sign. Therefore the function can be used when communicating with only 1 station.
- Even if the squelch is closed by the Digital Call Sign Squelch function, you can receive data in the DV mode.

**NOTE:** Even if the squelch is closed by the Digital Code Squelch function, you can receive data in the DV mode.
You can save repeater information for quick and simple communication in up to 2500 repeaters (repeater list) on up to 50 Groups. Data must be in the repeater list to use the DR function. You can add and edit repeater content and groups in the repeater list.

You can enter 6 types of frequencies into the repeater list, as shown below:
- DV Repeater
- DV Simplex
- FM Repeater
- FM Simplex
- DD Repeater
- DD Simplex

**Repeater list contents**
The following contents are included in the repeater list: See page 10-26 for details.
- **TYPE:** Communication type
- **NAME:** Repeater name
- **SUB NAME:** Repeater sub name
- **CALL SIGN:** Repeater call sign and port letter
- **GW CALL SIGN:** Gateway repeater’s call sign and port “G”
- **GW IP ADDRESS:** Gateway IP address
- **GROUP:** Repeater group
- **USE (FROM):** Access repeater use
- **FREQUENCY:** Access repeater’s frequency
- **DUP:** Duplex direction
- **OFFSET FREQ:** Frequency offset
- **TONE:** Tone setting
- **REPEATER TONE:** Repeater tone
- **POSITION:** Position data accuracy level
- **LATITUDE:** Latitude of the repeater
- **LONGITUDE:** Longitude of the repeater
- **UTC OFFSET:** UTC Offset

**TIP:**
- For easy operation, the repeater list is preloaded into your transceiver. However, if you do an All Reset, the CPU deletes all setting data, the Memory channels, and the repeater list. We recommend that you back up the memory data to an SD card or save it to a PC using the CS-9700 CLONING SOFTWARE.
- The repeater list can be downloaded from the Icom website.

http://www.icom.co.jp/world/support/download/frm/index.html

Example: "Hirano" repeater information

![Example repeater list](image)
## Entering new information into the repeater list

This section describes how to manually enter new repeater information into the repeater list. The required setting items differ, depending on your communication usage. Confirm the required items, as shown below.

### Required items for the communication cases

<table>
<thead>
<tr>
<th>Repeater list contents</th>
<th>Used as an access repeater</th>
<th>Used as a destination repeater</th>
<th>Used as an FM repeater</th>
<th>Simplex (FROM)</th>
</tr>
</thead>
<tbody>

<td>DD Repeater</td>
<td>DD Repeater</td>
<td>DD Repeater</td>
<td>DD Simplex</td>
</tr>
<tr>
<td></td>
<td>FM Repeater</td>
<td>FM Repeater</td>
<td>FM Repeater</td>
<td>FM Simplex</td>
</tr>
</tbody>
</table>

- **NAME**: ○ (Must be entered)  
- **SUB NAME**: ○  
- **CALL SIGN**: ●  
- **GW CALL SIGN**: ●  
- **GW IP ADDRESS**: N/A  
- **GROUP**: ○  
- **USE (FROM)**: ●  
- **FREQUENCY**: ●  
- **DUP**: ●  
- **OFFSET FREQ**: ●  
- **TONE**: N/A  
- **REPEATER TONE**: N/A  
- **POSITION**: ○  
- **LATITUDE**: ○  
- **LONGITUDE**: ○  
- **UTC OFFSET**: ○  

- **NOTE**: To enter repeater information into the repeater list, the repeater’s call sign must be entered first.

- ●: Must be entered  
- ○: Possible to enter  
- N/A: Not Applicable
10. D-STAR OPERATION (ADVANCED)

Entering new information into the repeater list

◇ Entering new information into the repeater list

**Step 1. Selecting the repeater group**
1. Open the DV/DD MEMORY screen.

   ![Menu Screen]

2. Touch “Repeater List.”

   ![Display Screen 1]

   ■ Displays the repeater list of the selected repeater group.

3. Touch a repeater group to add a repeater to.

   ![Display Screen 2]

   • The REPEATER LIST EDIT screen is displayed.

4. Push [QUICK].

5. Touch “Add.”

**Step 2. Selecting the communication type**
1. Touch “TYPE.”

2. Touch the communication type.

   - DV Repeater: Repeater operation in the DV mode.
   - DV Simplex: Simplex operation in the DV mode.
   - FM Repeater: Repeater operation in the FM mode.
   - FM Simplex: Simplex operation in the FM mode.
   - DD Repeater: Repeater operation in the DD mode.
   - DD Simplex: Simplex operation in the DD mode.

**Step 3. Entering the repeater name**
1. Touch “NAME.”

2. Enter a name of up to 16 characters.

3. After entering, touch [ENT].

**Step 4. Entering the repeater sub name**
1. Touch “SUB NAME.”

2. Enter a sub name of up to 8 characters.

3. After entering, touch [ENT].

**Step 5. Entering the repeater call sign**

1. Touch “CALL SIGN.”

2. Enter the repeater call sign of up to 8 characters, including spaces and the node letter.

   ![NOTE]

   **NOTE:** BE SURE to add the repeater node letter in the 8th digit of the call sign, according to the frequency band shown below. Note that there are almost always different node letters between Japanese D-STAR repeaters and repeaters in other countries.

   Cross band operation between different nodes at the same repeater site can be made.

   - 1200 MHz: A (B in Japan)
   - 430 MHz: B (A in Japan)
   - 144 MHz: C (no D-STAR repeaters in Japan)

3. After entering, touch [ENT].

**Step 6. Entering the gateway repeater call sign**

& Continued on the next page
10. D-STAR OPERATION (ADVANCED)

### Entering new information into the repeater list

† This item is displayed when **Step 2. Selecting the communication type** is set to "DV Repeater" or "DD Repeater.

† The 8th digit in the call sign, entered in **Step 5. Entering the repeater call sign**, is automatically set to "G" as the gateway port, so you can skip this setting and go to the next item.

1. Touch "GW CALL SIGN."
2. Enter a gateway repeater call sign of up to 8 characters, including spaces.
   † Only a space or "G" can be entered in the 8th digit.
3. After entering, touch [ENT].

### Step 7. Entering the Gateway IP address

† This item is displayed when **Step 2. Selecting the communication type** is set to "DD Repeater."

1. Touch "GW IP ADDRESS."
2. Enter the IP address.
   † Range: 0.0.0.1 ~ 255.255.255.254
3. After entering, touch [ENT].

### Step 8. Changing the repeater group

1. Touch "GROUP."
2. Touch the repeater group. (01 ~ 50)

### Step 9. Setting "USE(FROM)" to be used as an Access repeater

† You can use the entered repeaters as an access repeater when using the DR function. When not using as an access repeater, select "NO," and go to **Step 15. Selecting the position data accuracy level**. In that case, the entered repeater is not displayed in "FROM" on the DR screen.

1. Touch "USE(FROM)."
2. Touch "YES" to use the repeater as an access repeater.

### Step 10. Entering the access repeater frequency

1. Touch "FREQUENCY."
2. Enter the repeater frequency.
3. After entering, touch [ENT].

### Step 11. Selecting the Duplex direction

† When **Step 2. Selecting the communication type** is set to "DV Simplex" or "FM Simplex," this item is not displayed.

† "DUP−" is automatically set when the access repeater frequency is entered in **Step 9. Entering the access repeater frequency.** If necessary, you can change the Duplex direction.

1. Touch "DUP."
2. Touch a Duplex direction.
   † OFF: Turn the duplex function OFF.
   † DUP−: The transmit frequency shifts down from the receive frequency by the offset amount.
   † DUP+: The transmit frequency shifts up from the receive frequency by the offset amount.

### Step 12. Entering the frequency offset

† This item is displayed when **Step 2. Selecting the communication type** is set to "DV Simplex" or "FM Simplex"; this item is not displayed.

† The offset value is automatically set when the access repeater frequency is entered in **Step 9. Entering the access repeater frequency.** If necessary, you can change the frequency offset.
   * The default value differs, depending on the transceiver version.

1. Touch "OFFSET FREQ."
2. Enter the frequency offset.
   † Range: 0.000.00 ~ 99.999.9 MHz
3. After entering, touch [ENT].

### Step 13. Setting the tone

† When **Step 2. Selecting the communication type** is set to "DV Repeater" or "DV Simplex," this item is not displayed.

1. Touch "TONE."
2. Touch an option.
   † OFF: Turn OFF the Tone function.
   † TONE: Select when the repeater requires an access tone.
   † TSQL: Select when you want to use the tone squelch operation in simplex.
10. D-STAR OPERATION (ADVANCED)

Entering new information into the repeater list

✧ Entering new information into the repeater list

**Step 14. Selecting the repeater tone frequency**

1. Touch "REPEATER TONE."
2. Set the repeater tone frequency, then touch [ENT].
3. Push EXIT.

**Step 15. Selecting the position data accuracy level**

1. Touch "POSITION."
2. Touch the position data accuracy level.
   - None: Select when the repeater has no position data.
   - Approximate: Select when the entered position data is approximately correct.
   - Exact: Select when the entered position data is exactly correct.

**Step 16. Entering the latitude**

1. Touch "LATITUDE."
2. Enter the latitude.
   - To enter a north latitude, select "N," and to enter a south latitude, select "S."
3. After entering, touch [ENT].

**Step 17. Entering the longitude**

1. Touch "LONGITUDE."
2. Enter the longitude.
   - To enter an east latitude longitude, select "E," and to enter a west longitude, select "W."
3. After entering, touch [ENT].

**Step 18. Setting the UTC offset**

1. Touch "UTC OFFSET."
2. Set the time difference between UTC and the local time, then push [ENT].
3. Push EXIT.

**Step 19. Saving the repeater list**

1. Touch "<<Add Write>>."
2. Touch <YES>.
   - The entered contents are saved in the repeater list, and the display returns to the selected repeater group screen.

TIP: To cancel the entered data

1. Push EXIT to display the "Cancel edit?" window.
2. Touch <YES>.
   - Cancels entry and returns to the selected repeater group screen.
Editing repeater data
You can edit repeater data. This is useful when already-entered data is incorrect, has changed, or some data needs to be added to the list.

1. Open the REPEATER GROUP screen.
   MENU » (2) > DV/DD Memory > Repeater List
2. Touch a repeater group where the repeater you want to edit is listed.
3. Touch a repeater you want to edit for 1 second.
4. Touch “Edit.”
5. Touch an item, then edit it.
6. After editing, touch “<<Overwrite>>.”
7. Touch <YES>.
   • The edited contents are saved into the repeater list, and returns to the selected repeater group screen.
8. Push EXIT several times to close the Repeater List screen.

• The confirmation dialog is displayed.
10. D-STAR OPERATION (ADVANCED)

Entering new information into the repeater list

◇ Deleting repeater data

1. Open the REPEATER GROUP screen.
   MENU > 2 > DV/DD Memory > Repeater List

2. Touch a repeater group where the repeater you want to delete is listed.

3. Touch the repeater to be deleted for 1 second.

4. Touch “Delete.”
   • The confirmation dialog is displayed.

5. Touch <YES>.
   • The selected repeater contents are deleted from the repeater list, and returns to the selected repeater group screen.

6. Push EXIT several times to close the Repeater List screen.

NOTE: The currently selected repeater on the DR screen cannot be edited or deleted. To edit or delete the repeater, select another repeater on the DR screen.
10. D-STAR OPERATION (ADVANCED)

Entering new information into the repeater list

◇ Rearranging the display order of the repeaters
You can move the entered repeaters to rearrange their display order in the selected repeater group.

Example: Moving “Hirano/Icom” above “Nakano.”

1. Open the REPEATER GROUP screen.

2. Touch a repeater group where the repeater you want to move is listed.

3. Touch the repeater to be moved for 1 second.

4. Touch “Move.”

5. Touch a repeater to insert the repeater you want to move above it.

6. Push EXIT several times to close the Repeater List screen.

◇ Adding a new repeater information from RX History

1. Open the RX HISTORY screen.

2. Rotate MAIN DIAL to display the repeater you want to add to the repeater list.

3. Touch [DETAIL].

4. Rotate MAIN DIAL to display “RXRPT1” and “RXRPT2.”

5. Push QUICK.

6. Touch “Add To Repeater List.”

7. Touch the repeater call sign that you want to add to the repeater list.

- Displays the REPEATER LIST EDIT screen. The selected repeater call sign is automatically entered.

8. Touch “<<Add Write>>.”
- The confirmation dialog is displayed.

- The repeater contents are added to the repeater list, and the display returns to the RX HISTORY screen.

10-32
10. D-STAR OPERATION (ADVANCED)

Entering new information into the repeater list

◊ Skip setting for the DR scan
You can set repeaters as scan skip repeaters. The selected repeaters are skipped for faster scanning. You can set the skip setting to all repeaters in the selected repeater group, or to individual repeaters.
①When a repeater is set as a skip repeater, its “USE (FROM)” setting is automatically set to “NO.” In that case, the repeater cannot be selected in “FROM” (Access repeater) on the DR screen.

<Individual skip setting>
1. Open the REPEATER GROUP screen.
2. Select a repeater group where the repeater you set the skip setting is listed.
3. Touch the repeater to be skipped for 1 second.
4. Touch “SKIP.”
   • Displays “SKIP” in the upper right corner.
   ①Select “SKIP” again to cancel the skip setting.
   ②Select “SKIP All ON” to set the skip setting to all repeaters in the group.
5. Push EXIT several times to close the Repeater List screen.

<TIP>
• When you select “Repeater List” on the FROM SELECT screen, you can set the skip setting as described to the left.

<Group skip setting>
On the REPEATER GROUP screen, push QUICK, then select “SKIP All ON” to skip the repeaters in the group during the DR scan.
①To cancel the skip settings in the group, select “SKIP All OFF.”

• When “FROM” is selected on the DR screen, push QUICK to set the skip setting, as shown below.
  Rotate MAIN DIAL to select SKIP, then touch it.
  ①Displays “SKIP” in the “FROM” field.
10. D-STAR OPERATION (ADVANCED)

Entering new information into the repeater list

◇ Entering or editing a repeater group name

1. Open the REPEATER GROUP screen.

   MENU > (2) > DV/DD Memory > Repeater List

2. Touch a Repeater group that you edit the name for 1 second.

3. Touch “Edit Name.”

4. Enter a group name of up to 16 characters, and then touch [ENT].

5. Push [EXIT] several times to close the Repeater Group screen.
Your Call Sign

♡ Entering Your Call Sign
You can manually enter a Your (destination) Call Sign. When a Your Call Sign is set to “TO,” you can make a call to the station, even if you do not know where the station is currently located.
Up to 300 “Your Call Signs” can be entered.

Example: Entering “Rick/JM1ZLK” to the Your Call Sign memory.

1. Open the YOUR CALL SIGN screen.  
   MENU » DV/DD Memory > Your Call Sign

2. Push QUICK.

3. Touch “Add.”

4. Touch “NAME.”

5. Enter a station name of up to 16 characters, and then touch [ENT].

6. Touch “CALL SIGN.”

7. Enter Your call sign of up to 8 characters, including spaces, and then touch [ENT].

8. Touch “<<Add Write>>.”

   • The confirmation dialog is displayed.

10. Push EXIT several times to close the Your Call Sign screen.

TIP: To cancel the entered call sign
Push EXIT to display the “Cancel edit?” window. Touch “YES” to cancel the entry and return to the YOUR CALL SIGN screen.

To edit the entered call sign
To edit the entered call sign, select “Edit” in step 3.
10. D-STAR OPERATION (ADVANCED)

Your Call Sign

**Deleting Your Call Sign**

1. Open the YOUR CALL SIGN screen. 
   
   ![Menu screen](image)

2. Touch a call sign you want to delete for 1 second.

3. Touch "Delete."

   ![Delete screen](image)

   • A confirmation dialog is displayed.

4. Touch <YES>.

   ![Confirmation dialog](image)

   • The selected call sign is deleted from the Your Call Sign list, and the returns to the YOUR CALL SIGN screen.

5. Push EXIT several times to close the Your Call Sign screen.

**Rearranging the display order of Your Call Signs**

You can move Your Call Signs to rearrange their display order. If the stations you often communicate with are moved to the top of the list, it is easy to find them.

**Example:** Moving “Rick” above “Eddy.”

1. Open the YOUR CALL SIGN screen.
   
   ![Menu screen](image)

2. Touch a Your Call Sign to be moved for 1 second.

3. Touch “Move."

   ![Move screen](image)

   • While moving, “DESTINATION” blinks.

4. Touch the position to insert the Your Call Sign you want to move the call sign above.

   ![Blinks](image)

   • The selected call sign is inserted above the destination call sign.

   **If “<<Move End>>” is selected, the Your Call Sign is moved to the bottom of the group.**

5. Push EXIT several times to close the Your Call Sign screen.

**NOTE:** The currently selected Your Call Sign on the DR screen cannot be edited or deleted. To edit or delete the Your Call Sign, select another Your Call Sign on the DR screen.
Are your settings correct?

If you make a Local Area call with a gateway setting still selected in “TO,” the destination repeater will be busy while you transmit. The stations that want to use the repeater as their Access repeater cannot access it, as shown below.

**BE SURE** to set CQCQCQ in “TO” on the DR screen when you intend to make a Local Area call, or after you finish a Gateway call.

**Example:** JG3LUK wants to make a Local Area call.

![Diagram showing a call between Hirano and Kirkland areas]

JG3LUK’s setting

The destination (“TO”) setting is incorrect.

Correct setting

To make a Local Area call, set the destination (“TO”) to “CQCQCQ.” See page 11-13 for details.

**NOTE:** With this setting, you can make a Local Area call, but the destination Repeater, selected in “TO,” is also busy while you transmit. The stations that want to use the repeater as their Access Repeater cannot access it.
11. ABOUT THE DV GATEWAY FUNCTION

About the DV Gateway function

Even if you cannot access a D-STAR repeater, you can make Gateway calls with the DV Gateway function. There are two modes, the Terminal mode and the Access Point mode.

1. Other stations can also directly communicate using the DV Gateway function, only if they use call sign routing.
2. When using the DV Gateway function, you cannot make a Local area call.

IMPORTANT:
- Before operating in the Terminal mode or the Access Point mode, BE SURE to check your local regulations or laws.
- Register your call sign (MY) at a gateway server.*
- Register the Terminal/AP call sign that is set in the transceiver, RS-MS3A, or RS-MS3W to the RS-RP3C as the access point.*
- * Ask the gateway repeater administrator for details.

Terminal mode
The Terminal mode enables you to make Gateway calls through the Internet.

In the Terminal mode, the transceiver does not transmit or receive RF signals through the antenna.

When using the Internal Gateway function:

Access Point mode
The Access Point mode enables you to use another D-STAR transceiver and remotely*1 make Gateway calls through an Access point transceiver.

When using the Internal Gateway function:

When using the External Gateway function
Even if you cannot connect the transceiver to the Internet directly, or you want to use a cellular system, you can use the DV Gateway function by using a Windows or Android device that is running the RS-MS3W or RS-MS3A application.

1. You need the OPC-2350LU to connect the transceiver to your device.

Terminal mode

Access Point mode

Set “Gateway Select” to “External Gateway”
1. Open the Gateway Select screen.

2. Touch “External Gateway (DATA).”

NOTE: When using the DV Gateway function
- When operating in the Access Point mode, you need two call signs. One for the Access Point transceiver and one for the Remote D-STAR transceiver. (p. 11-2)
- You need an Internet connection with an IPv4 Global IP address. If you use a cellular system, you need an IPv4 Global IP address assigned to your Windows or Android device.
- When you use your Windows or Android device, read the RS-MS3W or RS-MS3A instruction manual in addition to this document. They can be downloaded from the Icom website. (pp. 11-10, 11-11)
About the Terminal/AP Call sign

◊ When operating in the Terminal mode

**IMPORTANT:**
- Register your call sign (MY) at a gateway server.*
- Register the Terminal/AP call sign that is set in the transceiver, RS-MS3A, or RS-MS3W software application to the RS-RP3C repeater gateway software as the access point.*
- Ask the gateway repeater administrator for details.

**Information**
- The Terminal Call sign should be 8 characters. Enter spaces between MY call sign and the 8th character.
- Enter a unique ID suffix between A and F at the end of MY Call Sign for the 8th character.
- Call signs shown below are just examples.

When using the Internal Gateway function
Enter the Terminal Call sign in “Terminal/AP Call sign” in the transceiver. (p. 11-8)

MENU » (2) > DV GW > Internal Gateway Settings > Terminal/AP Call sign

When using the External Gateway function
Enter the Terminal Call sign in “Terminal/AP Call sign” in the RS-MS3W or RS-MS3A.

◊ When operating in the AP mode

**IMPORTANT:**
- Register your call sign (MY) at a gateway server.*
- Register the Terminal/AP call sign that is set in the transceiver, RS-MS3A, or RS-MS3W software application to the RS-RP3C repeater gateway software as the access point.*
- Ask the gateway repeater administrator for details.

**Information**
- The AP Call sign should be 8 characters. Enter spaces between Access Point (AP) transceiver’s MY call sign and the 8th character.
- Enter a unique ID suffix between A and F at the end of MY Call Sign for the 8th character.
- Call signs shown below are just examples.

When using the Internal Gateway function
Enter the AP Call sign in “Terminal/AP Call sign” in the transceiver. (p. 11-8)

MENU » (2) > DV GW > Internal Gateway Settings > Terminal/AP Call sign

When using the External Gateway function
Enter the AP Call sign in “Terminal/AP Call sign” in the RS-MS3W or RS-MS3A.
11. ABOUT THE DV GATEWAY FUNCTION

Setting up a network

Before using the DV Gateway function, you have to set up a network.

When using the Internal Gateway function
See page 11-4.

When using the External Gateway function
1. When connecting your device*1 to the Internet using a router (p. 11-4)
2. When connecting your device*1 to the Internet using a cellular system (p. 11-6)
3. When connecting your device*1 to the Internet using a mobile router (p. 11-7)

*1 Windows or Android device

NOTE: Depending on your contract, you may be charged a large or additional communication fee. Ask your Internet service provider about the content of your contract.

*2 You can use a cellular system compatible computer.
11. ABOUT THE DV GATEWAY FUNCTION

Setting up a network

◊ When connecting your device to the Internet using a router

The following items are needed to use the DV Gateway function.
• An Internet connection with an IPv4 Global IP address
• A static*1 local IP address set to your transceiver, Windows, or Android device
• Port forwarding of port 40000

1. A Global IP address

A static or dynamic IPv4 Global IP address assigned to the router is needed.
① Your router may not have a Global IP address, depending on your Internet service provider. Ask your Internet service provider about the Global IP address setting.

2. Setting a static local IP address

When using a router, you need to set a static local IP address to the transceiver, Windows, or Android device.
① Usable IP addresses differ, depending on your router. Ask the router’s manufacturer for details.
② Do not set the same IP address to two or more devices that are connected to the same router.
③ Ask your Windows or Android device’s manufacturer about the setting details.

Transceiver setting

When using the Internal Gateway function, open the NETWORK screen, and set these items.
① Ask your network administrator for details.

<table>
<thead>
<tr>
<th>Items</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>DHCP</td>
<td>ON (Default) → OFF</td>
</tr>
<tr>
<td>IP Address</td>
<td>An IP address that is not assigned to any other device. Example: 192.168.0.10 (Default)</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>The subnet mask of the IP address Example: 255.255.255.0 (Default)</td>
</tr>
<tr>
<td>Default Gateway</td>
<td>An IP address of the LAN side on the router Example: 192.168.0.1</td>
</tr>
<tr>
<td>Primary DNS Server</td>
<td>An IP address of the DNS Server. Normally, enter the default gateway IP address. Example: 192.168.0.1</td>
</tr>
<tr>
<td>2nd DNS Server</td>
<td>An IP address of the secondary DNS Server. Set this item if necessary.</td>
</tr>
</tbody>
</table>

*1 A static IP address to the transceiver, Windows, or Android device is recommended.
*2 Forward port number 40000.

LAN cable

Needs a Global IP address.
When connecting your device to the Internet using a router (Continued)

3. Port forwarding

When using a router, enable communication with the Internet, as described below.
- Forward the port number 40000 to the transceiver, Windows, or Android device.
- “UDP” should be used as the port protocol.
- Set a static local IP address in Procedure 2 (2. Setting a static local IP address) as a destination port.
  ① Ask the router’s manufacturer about how to forward the port.
  ② Only one transceiver, Windows, or Android device connected to the router can use the DV Gateway function at the same time.
  ③ Depending on the router settings, you must configure the IP filter settings. Check the router’s manual on how to configure the settings.

⇒ When using the Internal Gateway function, go to “Setting up the transceiver.” (p. 11-8)
⇒ When using a Windows device, go to “Setting up the RS-MS3W.” (p. 11-10)
⇒ When using an Android device, go to “Setting up the RS-MS3A.” (p. 11-11)

*1 A static IP address to the transceiver, Windows, or Android device is recommended.
*2 Forward port number 40000.
11. ABOUT THE DV GATEWAY FUNCTION

Setting up a network

◊ When connecting your device to the Internet using a cellular system

A Global IP address is required to use the DV Gateway function.

A Global IP address

A static or dynamic IPv4 Global IP address assigned to your Windows or Android device is needed. Ask your Internet service provider to provide a Global IP address to your device.

NOTE:

• Turn OFF your Wi-Fi setting when you operate using a cellular system.
• Communication errors may occur when using a cellular system.
• Depending on your contract, you may be charged a large or additional communication fee. Ask your cellular system company about the content of your contract.

→ When using a Windows device, go to “Setting up the RS-MS3W.” (p. 11-10)
→ When using an Android device, go to “Setting up the RS-MS3A.” (p. 11-11)
11. ABOUT THE DV GATEWAY FUNCTION

Setting up a network

◇ When connecting your device to the Internet using a mobile router

The following items are needed to use the DV Gateway function.
  • An Internet connection with an IPv4 Global IP address
  • A static*1 local IP address set to your Windows or Android device
  • Port forwarding of port 40000

1. A Global IP address

A static or dynamic IPv4 Global IP address assigned to the mobile router is needed.
① Your router may not have a Global IP address, depending on your Internet service provider.
  Ask your Internet service provider about the Global IP address setting.

2. Setting a static local IP address

When using a mobile router, you need to set a static local IP address to Windows or Android device.
① Usable IP addresses differ, depending on your router. Ask the router’s manufacturer for details.
② Do not set the same IP address to two or more devices that are connected to the same router.
③ Ask your Windows or Android device’s manufacturer about the setting details.

3. Port forwarding

When using a mobile router, enable communication with the Internet, as described below.
  • Forward the port number 40000 to your Windows or Android device.
  • “UDP” should be used as the port protocol.
  • Set a static local IP address in Procedure 2 (2. Setting a static local IP address to your device) as a destination port.
① Ask the router’s manufacturer about how to forward the port.
② Only one Windows or Android device connected to the router can use the DV Gateway function at the same time.
③ Depending on the router settings, you may need to configure the IP filter settings. Check the router’s manual on how to configure the settings.

→ When using a Windows device, go to “Setting up the RS-MS3W.” (p. 11-10)
→ When using an Android device, go to “Setting up the RS-MS3A.” (p. 11-11)
11. ABOUT THE DV GATEWAY FUNCTION

Setting up the device

When using the Internal Gateway function

Connecting the LAN cable
Connect the transceiver to the router using the LAN cable.

Setting the Internal Gateway Settings

1. Open the INTERNAL GATEWAY SETTINGS screen.

   MENU » (2) > DV GW > Internal Gateway Settings

2. Touch to select the item to set.
   (Example: “Terminal/AP Call sign”)

3. Enter a call sign, and then touch [ENT].
   ① See right for details on the setting items and their options.

4. To close the INTERNAL GATEWAY SETTINGS screen, push [EXIT] several times.

Gateway Repeater (Server IP/Domain)
Enter the RS-RP3C’s gateway repeater address or domain name.
① The address consists of up to 64 characters.

NOTE: You must have your call sign registered to the gateway server that has the RS-RP3C installed. Ask the gateway repeater administrator for details.

Terminal/AP Call sign
Enter the Terminal/AP call sign that is registered as the access point on the RS-RP3C’s Personal Information screen.
① The call sign consists of 8 characters.
   • Enter spaces before the 8th character if necessary.
   • Enter a desired ID suffix between A to F for the 8th character.

Gateway Type (Default: Global)
Select the gateway type.
① Select “Global” when operating outside of Japan.

Allowed Call Sign (Access Point Mode) (Default: Disable)
Select to use the call sign restriction for the Access Point mode. When “Enabled” is selected, this allows only stations with registered call signs to transmit through the Internet.
   • Disabled: Allows all call signs to transmit.
   • Enabled: Allows only the call sign entered on the “Allowed Call sign List” to transmit. (See the next page.)
① When using the Terminal mode, select “Disabled.”
11. ABOUT THE DV GATEWAY FUNCTION

Setting up the device

◇ When using the Internal Gateway function

Allowed Call Sign List
Enter the call sign of the stations that you allow to transmit through the Internet while “Enabled” is selected for “Allowed Call sign (Access Point Mode).”
① You can add up to 30 call signs.

Adding a call sign
1. Touch for 1 second.
2. Touch “Add.”
3. Enter the Call sign, and then touch [ENT].

Deleting a call sign
1. Touch the Call sign for 1 second to open the QUICK MENU.
2. Touch “Delete.”
3. Touch [YES].
11. ABOUT THE DV GATEWAY FUNCTION

Setting up the device

**When using the RS-MS3W software**
The RS-MS3W is a Windows application to use with the External Gateway function. You can download it from the Icom website.

**System requirements**
The following are required to use the RS-MS3W.
(As of March 2019)

- **Operating System (OS)**
  - Microsoft® Windows® 7 (32/64bit)
  - Microsoft® Windows® 8.1 (32/64bit)
  - Microsoft® Windows® 10 (32/64bit)
  - You cannot use Windows Mobile.

- **USB port**
  - USB 1.1 or 2.0 port

- **Data cable**
  - OPC-2350LU DATA CABLE (purchase separately)

**NOTE:** Before using the data cable, you have to install its USB driver. The latest USB driver and Installation Guide for the OPC-2350LU can be downloaded from “Options” section towards the bottom of the firmware page on the Icom website. Carefully read the guide, before installing the driver. http://www.icom.co.jp/world/support/download/firm/

**Installing the RS-MS3W**
Download the latest RS-MS3W and its instruction manual from the Icom website. Read the RS-MS3W instruction manual on how to install the software.
① Search by “RS-MS3W.”
http://www.icom.co.jp/world/support/download/firm/

**Connecting the OPC-2350LU**
Connect the transceiver to the Windows device using the OPC-2350LU.

**NOTE:** Turn OFF the transceiver before connecting or disconnecting the cable.

**COM port settings**
Set the data port.

1. After connecting, turn ON the transceiver.
2. Click “Com Port (P)” in the “Settings (S).”
   • The Com Port Setting window is displayed.
3. Select the COM port number that the data cable is connected to.
   ① Click “▼” to display the COM ports on a drop-down list.
   ② See the data cable’s Installation Guide that you can download on the Icom website, for details on checking the COM port number.
4. Click <OK>.

**Setting the RS-MS3W**
Set the RS-MS3W to start using the DV Gateway function.

① The screen may be different, depending on the application version.

Read the RS-MS3W instruction manual about each setting item.

**NOTE: About the Firewall setting**
When you use a firewall security software, a communication error may occur by the firewall blocking the necessary ports or data. Before using the DV Gateway function, confirm that the RS-MS3W’s communication is not blocked.
① Ask your firewall security software’s manufacturer about the setting details.
11. ABOUT THE DV GATEWAY FUNCTION

Setting up the device

When using the RS-MS3A
The RS-MS3A is an application for Android device to use the External Gateway function.
Download the application from Google Play.

System requirements
The following are required to use the RS-MS3A.
(As of March 2019)

- **Android device**
  - Android 4.0 or later with the USB host function
  - The RS-MS3A has been tested with Android 4.x.x, 5.x.x, 6.x.x, 7.0, and 8.0.

**TIP:** The USB host function is needed to use a USB device with an Android device. To check whether or not your Android device has the USB host system, ask the Android device’s manufacturer.

- **Data cable**
  - OPC-2350LU DATA CABLE (purchase separately)
  
**NOTE:**
- Some functions may not be usable, depending on:
  - applications installed in the Android device
  - memory capacity

For operations or settings of the Android device, read the Android device’s instruction manual.
Display indications may differ, depending on the OS version or settings.

Installing the RS-MS3A
1. Start the Android device.
2. Touch “Play Store.”
3. Enter “RS-MS3A.”
   - Do not abbreviate the application name to search.
4. Touch “search.”
5. Touch “RS-MS3A.”
   - The RS-MS3A application information is displayed.
   - If your Android device is not compatible with the RSMS3A, the application is not displayed.
6. Touch “Install.”
7. Touch “Agree to download.”
   - Starts installing the application.
   - After the installation is completed, the icon is displayed on your home screen.

Connecting the OPC-2350LU
Connect the transceiver to the Android device using the OPC-2350LU.

**NOTE:**
- Turn OFF the transceiver before connecting or disconnecting the cable.
- Remove the OPC-2350LU when you do not use the cable. Otherwise, the battery will be quickly exhausted.
- If the application selection window is displayed, select “RS-MS3A” to start the application.
- If your Android device has a USB Type-C port, you need a USB On-The-Go (OTG) adapter to convert the data cable’s plug to USB Type-C.

Setting the RS-MS3A
Set the RS-MS3A to start using the DV Gateway function.

- The screen may be different, depending on the application version.

Read the RS-MS3A instruction manual about each setting item.
Search by “RS-MS3A”
http://www.icom.co.jp/world/support/download/firm/
11. ABOUT THE DV GATEWAY FUNCTION

Terminal mode operation

Setting the Terminal mode

1. Open the DV GATEWAY screen.

2. Touch "<<Terminal Mode>>."

When using the External Gateway function
After the transceiver is in the Terminal mode, click (touch) <Start> in the RS-MS3W or RS-MS3A.

If an error message is displayed, see page 11-24 to read the tips to solve the problem.

NOTE: In the Terminal mode
- The Time Out Timer function is not activated.
- The Following items are automatically set.
  - Mode: DV mode*
  - DR function: ON (MAIN band)*
  - FROM: MY Call Sign
  - Dualwatch function: OFF*
  - AFC function: OFF
  - RIT function: OFF
  - P.AMP function: OFF
  - EXT P.AMP function: OFF
  - ATT function: OFF
  - IP+ function: OFF
  - TX PWR LIMIT function: OFF
- * These settings do not return to the previous settings, even if you cancel the Terminal mode.
- The Terminal mode is not automatically canceled, even if you turn OFF the transceiver, then turn it ON again.

TIP: Canceling the Terminal mode
Touch "<<Normal Mode>>" in the DV GATEWAY screen.

When using the External Gateway function, click (touch) <Stop> in the RS-MS3W or RS-MS3A before the transceiver returns to the normal mode.

About the Internal Gateway icon
When using the Internal Gateway function, displays the communication status.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="icon1.png" alt="Icon" /></td>
<td>In the standby mode</td>

</tr>
</tbody>
</table>

If an error icon is displayed, see page 11-19 to read the tips to solve the problem.
11. ABOUT THE DV GATEWAY FUNCTION

Terminal mode operation

шей OPERATING IN THE TERMINAL MODE

Example: Making a Gateway CQ call

1. Touch "TO."

2. Touch "Gateway CQ."

3. Select the repeater group where your destination repeater is listed.

4. Select your destination repeater. (Example: Hirano/Icom)
   - Returns to the DR screen, and selected repeater name is set in "TO."

5. Push [TRANSMIT], or hold down the microphone's [PTT] to transmit.
   - While transmitting, the TX/RX indicator lights orange.
   - While receiving a signal through the Internet, you cannot transmit.
   - If you cannot receive a reply, see page 11-20 to read the tips to solve the problem.

Example: Making a call to a specific station

1. Touch "TO."

2. Touch "Your Call Sign."

3. Select your destination station. (Example: Rick)
   - Returns to the DR screen, and the selected name is set in "TO."

4. Push [TRANSMIT], or hold down the microphone's [PTT] to transmit.
   - While transmitting, the TX/RX indicator lights orange.
   - While receiving a signal through the Internet, you cannot transmit.
   - If you cannot receive a reply, see page 11-20 to read the tips to solve the problem.

NOTE: In the Terminal mode, you can make a Gateway CQ call, or a call to a specific station, using call sign routing.

- You cannot make a call if you select “Local CQ” or “Reflector.”
11. ABOUT THE DV GATEWAY FUNCTION

Access Point mode operation

Setting the Access Point mode
In this section, set an Access Point transceiver.

1. Open the DV GATEWAY screen.

MENU » (2) > DV GW

2. Touch "<<Access Point Mode>>."

When using the External Gateway function
After the transceiver is in the Access Point mode, click (touch) <Start> in the RS-MS3W or RS-MS3A.

If an error message is displayed, see page 11-24 to read the tips to solve the problem.

NOTE: In the Access Point mode
- The Following items are automatically set.
  - Mode: VFO mode*
  - Operating mode: DV mode*
  - Dualwatch function: OFF*
  - Duplex mode: OFF*
  - AFC function: OFF
  - RIT function: OFF
  - VOX function: OFF
  - MONITOR function: OFF
- * These settings do not return to the previous settings, even if you cancel the Access Point mode.
- The Access Point mode is not automatically canceled even if you turn OFF the transceiver, then turn it ON again.

TIP: Canceling the Access Point mode
Touch "<<Normal Mode>>" in the DV GATEWAY screen.

MENU » (2) > DV GW > <<Normal Mode>>

1. When using the External Gateway function, click (touch) <Stop> in the RS-MS3W or RS-MS3A before the transceiver returns to the normal mode.

About the Internal Gateway icon
When using the Internal Gateway function, displays the communication status.

<table>

</tbody>
</table>

If an error icon is displayed, see page 11-19 to read the tips to solve the problem.

NOTE: BE SURE to check your local regulations or laws to select the appropriate operating frequency.

When using the External Gateway function
After the transceiver is in the Access Point mode, click (touch) <Start> in the RS-MS3W or RS-MS3A.

If an error message is displayed, see page 11-24 to read the tips to solve the problem.
11. ABOUT THE DV GATEWAY FUNCTION

Access Point mode operation

Making a Gateway call through the Access point transceiver
In this section, set up a Remote D-STAR transceiver you are going to operate.
① Read the Remote D-STAR transceiver’s instruction manual for setting details.

NOTE: While in the Access Point mode, you can make a Gateway CQ call or a call to an individual station using call sign routing.
② You can select the “Local CQ,” but cannot make a call.

Example: When setting the operating frequency to 430.850 MHz, and making a Gateway CQ call.

Remote D-STAR transceiver*1

Operating frequency: 430.850 MHz
UR: JP1YIU A
MY: JL3YRP

Hamacho 430
(JP1YIU A)

Internet

Operating frequency: 430.850 MHz
MY Call Sign: JA3YUA
Terminal/AP Call sign*2: JA3YUA D

*1 Any model as long as the transceiver is D-STAR capable. Only one D-STAR transceiver can use the Access Point at a same time.

*2 When you use the External Gateway function, enter the Call sign in “Terminal/AP Call sign” in the RS-MS3W or RS-MS3A.

When using the DR function

NOTE: If you have imported the Repeater List, you have to register the Access Point information again because the Repeater List is overwritten.

In this document, the ID-51A (PLUS2)/ID-51E (PLUS2) is used as a Remote D-STAR transceiver as an example.

1. Register the Access Point information to the Repeater List
① Register the Access Point information in the MENU screen.
(MENU > DV Memory > Repeater List)

1. Select a group you want to add your Access Point information to.
2. After selecting a group, open the Repeater List Edit screen. (QUICK MENU > Add)

3. Set “DV Repeater” to “TYPE.”
① “DV Repeater” is used for Repeater operation in the DV mode.
4. Enter your favorite name into “NAME” and “SUB NAME.” (Example: MY AP)

5. Set the Access Point transceiver’s call sign to “CALL SIGN.” (Example: JL3YRP)
① After setting “CALL SIGN,” “GW CALL SIGN” is automatically set.
11. ABOUT THE DV GATEWAY FUNCTION

Access Point mode operation

◊ Making a Gateway call through the Access point transceiver

When using the DR function

1. Register the Access Point information to the Repeater List (Continued)
6. Set “YES” to “USE (FROM).”
7. Set the Access Point transceiver’s operating frequency to “FREQUENCY.” (Example: 430.850)
8. Set “DUP” to “DUP–.”

<table>
<thead>
<tr>
<th>REPEATER LIST EDIT 3/5</th>
</tr>
</thead>
<tbody>
<tr>
<td>USE(FROM): YES</td>
</tr>
<tr>
<td>FREQUENCY: 430.850.00</td>
</tr>
<tr>
<td>DUP: DUP–</td>
</tr>
</tbody>
</table>

9. Set “0.000.00” to “OFFSET FREQ.”

<table>
<thead>
<tr>
<th>REPEATER LIST EDIT 4/5</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFFSET FREQ: 0.000.00</td>
</tr>
<tr>
<td>POSITION: None</td>
</tr>
<tr>
<td>UTC OFFSET:</td>
</tr>
</tbody>
</table>

10. Select “<<Add Write>>” and write the Access Point information.

2. Set the Access Point using the DR function
Set the Access Point registered in Procedure 1 (1. Register the Access Point information to the Repeater List) to “FROM.”

<table>
<thead>
<tr>
<th></th>
<th>12:00</th>
</tr>
</thead>
<tbody>
<tr>
<td>TO</td>
<td></td>
</tr>
<tr>
<td>MY AP</td>
<td></td>
</tr>
<tr>
<td>430.850</td>
<td></td>
</tr>
<tr>
<td>JA3YUA</td>
<td></td>
</tr>
<tr>
<td>SLO</td>
<td>2019/02/08(Fri)</td>
</tr>
</tbody>
</table>

3. Set “TO” and transmit

1. Set “TO” destination. (Example: Hamacho 430)
   ① You can select the “Local CQ,” but cannot make a call.

<table>
<thead>
<tr>
<th></th>
<th>12:00</th>
</tr>
</thead>
<tbody>
<tr>
<td>TO</td>
<td></td>
</tr>
<tr>
<td>Hamacho</td>
<td></td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>430.850</td>
<td></td>
</tr>
<tr>
<td>JA3YUA</td>
<td></td>
</tr>
<tr>
<td>SLO</td>
<td>2019/02/08(Fri)</td>
</tr>
</tbody>
</table>

2. Hold down [PTT] to transmit.
   ① If you cannot receive a reply, see page 11-22 to read the tips to solve the problem.
11. ABOUT THE DV GATEWAY FUNCTION

Access Point mode operation

◇ Making a Gateway call through the Access point transceiver

When not using the DR function
In this document, the ID-51A (PLUS2)/ID-51E (PLUS2) is used as a Remote D-STAR transceiver as an example.

1. Enter the VFO mode
   Push [V/MHz].
   145.000
   ---
   FSkip
   —

2. Set the operating frequency
   Rotate [DIAL] to set the frequency that is set in the Access Point transceiver. (Example: 430.850)
   12:00
   430.850
   ---
   FSkip
   —

3. Set the Receive mode to “DV mode”
   Push [MODE] several times until “DV” is displayed.
   * When the “GPS TX Mode” is set, “DV-G” or “DV-A” is displayed.

4. Set the duplex direction
   1. Push [QUICK].
   2. Select “DUP.”
   3. Select “DUP—.”
11. ABOUT THE DV GATEWAY FUNCTION

Access Point mode operation

◊ Making a Gateway call through the Access point transceiver

When not using the DR function (Continued)

5. Set the frequency offset
1. Push [MENU].
2. Select “DUP/TONE....”

3. Select “Offset Freq.”

4. Set “0.000.00.”

5. Push [MENU].
   • Returns to the standby screen.

6. Set the destination station call sign to “UR”
1. Hold down [CS] for 1 second to enter the Operating Call Sign Select mode.
2. Select “UR.”
3. Set the destination repeater or destination station’s call sign.
   • In the Access Point mode, you can select the “CQCQCQ” but cannot make a call.

4. Push [MENU].
   • Returns to the standby screen.

7. Hold down [PTT] to transmit
   • If you cannot receive a reply, see page 11-22 to read the tips to solve the problem.

TIP: When the settings are saved into a memory channel, you can quickly select the settings. Read the Remote D-STAR transceiver’s instruction manual for details.
## Troubleshooting

### Error icon of the transceiver

If an error icon is displayed when using the Internal Gateway function, read the following chart. If you are unable to locate the cause of a problem or solve it through the use of this chart, contact your Icom Dealer or Service Center.

12. DD MODE OPERATIONS

About the DD mode

• Data communication at 128 kbps

• Data can be sent through an internet connection to another station or through another repeater

While in the DD mode and the “TX INHIBIT” is set to “OFF,” the data is automatically sent when data is input from a PC. The received data is output on the PC.

1. Obtain the static IP address

Set a static IP address to your PC.

Note the current IP address before you change it.

Communication without a repeater

Do not set the same IP address between PCs.

Example:

Communication using a repeater

Set the IP address, subnet mask and the repeater’s gateway address that are specified by the repeater administrator.

Example:

PRECAUTION

• While the transmission inhibit is OFF, files in the shared folder may be modified or deleted, or unknown file(s) may be copied into the folder by other station.

• Icom assumes no responsibility whatever for any damages or lost profits resulting from opportunities for signal communications being lost because of the failure, malfunction, poor condition, damage, or data loss of this unit or because of such external causes as power failure. Icom also dismisses all responsibility for demands made by a third party.

• Since the transmitting data is not encrypted, the data can be received and decrypted by other stations.

• Connect the IC-9700 and PC using an Ethernet cable for Data mode operation before starting the DD mode operation. (see p. 12-2)

• Disconnecting the PC from any other network, ISP, LAN, and so on, is recommended. A network error may occur.

• For data transferring (PC-to-PC communication), a fixed IP address must be set, and folder is shared in the same workgroup between both PC.

Setting your PC

To operate in the DD mode, you need a network environment Local Area Network (LAN).

• The communication in the DD mode is Peer to Peer.

• Refer to your PC manual for PC setting details.

1. Obtain the static IP address

Set a static IP address to your PC.

1. Note the current IP address before you change it.

Communication without a repeater

1. Do not set the same IP address between PCs.

Example:

Communication using a repeater

Set the IP address, subnet mask and the repeater’s gateway address that are specified by the repeater administrator.

Example:
12. DD MODE OPERATIONS

Setting your PC

2. Setting the computer information
Set the computer name, workgroup name and computer description.
① Set the same workgroup to both PCs.
② Some PCs may not need the setting.

3. Setting the shared folder

Setting the transceiver

◊ Connecting a LAN cable
Connect the PC and IC-9700 [LAN] port using a LAN cable (User supplied).

◊ Setting your call sign
Set your call sign for the DD mode operation.
You can set a different call sign for the DD mode operation.
① You do not have to set another call sign as long as you use the same one.
② IC-9700’s network setting is not required.

1. Display the MY CALL SIGN (DD) screen.
   [MENU] > SET > My Station> My Call Sign (DD)

2. Touch the call sign that you use for the DD mode operation. (Example: JA3YUA /DD)

3. Push [EXIT] several times to close the MY CALL SIGN screen.
12. DD MODE OPERATIONS

**DD mode operation without a repeater**

1. **Set the frequency and mode**
   1. Set the operating frequency in the VFO mode.
      (Example: 1293.100 MHz)
   2. Select the DD mode.

2. **Set the DD repeater simplex mode to OFF**
   1. Push [FUNCTION].
   2. Touch (2) to change the screen page.
   3. Confirm that [RPS] is set to “OFF.”
   4. Push [EXIT] several times to close the FUNCTION screen.

3. **Set the call sign**
   1. Display the CALL SIGN screen.
      » MENU (2) > CS
   2. Touch [UR].
   3. Touch [UR] for 1 second, to directly enter the call sign.
   4. Touch [Your Call Sign].
   5. Touch Your Call Sign, then find and touch the call sign of the station that you want to contact.
   6. Push [EXIT] several times to close the CALL SIGN screen.

6. **Cancel transmit inhibit and send the data**
   1. Push [TRANSMIT] to set [TX INHIBIT] to “OFF.”
   2. Confirm that you can find the other station’s shared folder on your PC.
   3. Open the shared folder.
   4. Drag and drop, or copy and paste the desired file to your folder.

5. **After the DD mode operation**
   - Push [TRANSMIT] to set [TX INHIBIT] to “ON.”

### Communication status indication

The communication status in the DD mode operation is displayed.

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Stand-by" /></td>
<td>Stand-by</td>
</tr>
</tbody>
</table>
| ![Data receiving](image) | Data receiving  
   - The received data is output to the PC.  
   - [TX/RX] lights green. |
| ![Data sending](image) | Data sending  
   - The IC-9700 is transmitting data.  
   - [TX/RX] lights red. |
12. DD MODE OPERATIONS

DD mode operation using a repeater

1. Select the access repeater (FROM)
   1. Set the operating band to 1200 MHz.
   2. Hold down CALL (DR) for 1 second.
   3. Touch [FROM] to select “FROM.”

4. Touch [Repeater List].

5. Touch [DD Mode].

6. Touch the DD mode repeater to access.

2. Select the area repeater (TO)
   1. Touch [TO] twice.

2. Touch [Your Call Sign].

3. Touch the other station’s call sign.

3. Cancel the transmit inhibit and send the data
   1. Push [TRANSMIT] to set [TX INHIBIT] to “OFF.”
   2. Confirm that you can find the other station’s shared folder on your PC.
   3. Open the shared folder.
   4. Drag and drop, or copy and paste the desired file on to the folder.

4. After the DD mode operation
   1. Push [TRANSMIT] to set [TX INHIBIT] to “ON.”

Communication status indication
The communication status in the DD mode operation is displayed.

</table>
1. Select the access repeater (FROM)

1. Set the operating band to 1200 MHz.
2. Hold down CALL for 1 second.
3. Touch [FROM] to select “FROM.”

4. Touch [Repeater List].

5. Touch [DD Mode].

6. Touch the DD mode repeater to access.

2. Select the area repeater (TO)

1. Touch [TO] twice.

2. Touch [Internet Connection].

3. Cancel the transmit inhibit and access the internet

1. Push [TRANSMIT] to set [TX INHIBIT] to “OFF.”
2. Open a WEB browser on your PC, and then access web sites.

4. After the DD mode operation

- Push [TRANSMIT] to set [TX INHIBIT] to “ON.”

Communication status indication

The communication status in the DD mode operation is displayed.

| Unable to transmit or receiving   | LAN cable is not connected or defective. | • Check the LAN cable connection.  
|                            | [TX INHIBIT] is “ON.”                | Push [TRANSMIT] to turn OFF [TX INHIBIT].     | p. 12-2   |
| Unable to share files     | PC setting is not correct.           | Check workgroup and folder sharing settings.  | –         |
| Unable to connect to the internet | IP address setting not correct.     | Set the correct IP address.                   | p. 12-1   |
13. UPDATING THE FIRMWARE

General

◊ About updating the firmware
You can update the IC-9700’s firmware using an SD card. Updating the firmware adds new functions and/or improves performance parameters. You can download the latest firmware from the Icom website.

http://www.icom.co.jp/world/

IMPORTANT: To update the firmware, first format your SD card using the IC-9700. Then copy the downloaded firmware data from your PC into the IC-9700 folder on the card.

◊ Checking the firmware version
Check the firmware version when you turn ON the transceiver.

The firmware version is displayed

TIP: You can also check the firmware version on the INFORMATION screen.

MENU » SET > Others > Information > Version

13. UPDATING THE FIRMWARE

General

◊ Preparation

Access the following URL and download the firmware file.

http://www.icom.co.jp/world/

1. Click [Support].

2. Click the “Firmware Updates/Software Downloads” link.

3. Click the desired firmware file link in the IC-9700 group.

4. Read “Regarding this Download Service” carefully, and then click [Agree].

5. Click “Save as” in the displayed File Download dialog.

6. Select the location where you want to save the firmware, and then click [Save] in the displayed File Download dialog.
   • The file starts downloading.
   • The firmware and the firm utility are compressed in a “zip” format folder. Unzip it before use.

◊ Unzipping the firmware folder

1. Right-click the downloaded firmware folder (zip format).
   • Right-click menu is displayed.

2. Click “Extract All...”
   • After unzipping, a folder is created in the same location as the downloaded folder.
   • In the “9700_*” folder, “9700_*.dat” is created.
   * Represents the release number.
13. UPDATING THE Firmware

Updating the firmware

CAUTION: NEVER turn OFF the transceiver while updating the firmware. If you turn OFF the transceiver, or if a power failure occurs while updating, the transceiver firmware will be damaged and you will have to send the transceiver back to the nearest Icom distributor for repair. This type of repair is out of warranty, even if the transceiver warranty period is still valid.

TIP: BE SURE to unzip the downloaded file. See the previous page for details.

1. Copy the downloaded firmware data into the IC-9700 folder on to an SD card.

2. Insert the SD card into the transceiver.

3. Display the SD CARD screen.

4. Touch “Firmware Update,” and then after you read and agree with all the precautions, touch [YES].
   • Scroll the screen and read all the precautions.

5. Touch the Firmware (Example: 9700_012345).
   • The final confirmation screen is displayed.
   ① Carefully read all the displayed precautions.

6. After you read and agree with all the precautions, touch [YES] for 1 second.
   • The updating starts.

7. When the update is completed, “Firmware updating has completed.” is displayed in the dialog.
   • The IC-9700 will automatically restart.
   ① After the updating finishes, the operating screen is displayed.
Count on us!
